Tubes, and people that use them, have been around a lot longer than
you have, 'son'. So have RF voltmeters, wattmeters, and the ability to
distinguish between the final's input and output. And if I'm not
mistaken (and I'm not), you can't determine input power from your
method of measuring just the DC input voltage.

Keith,

Not exactly. Correct that to 26.965 to 27.405 and you'd be mostly right. US Air Force cares, US Navy cares, and a host of others care. *I* care when I attempt to use a certain 26 MHZ frequency that I am licensed for and get interference--which is promptly reported thru channels to USAF Frequency Management. It has happened within the last 6 months. I don't really care what goes on within 11 meters so long as it doesn't impact me. Hey, I use CB too. I do it legally--no modded ham rigs, no amps. When I can't use the CB for what I want to, I either move to another channel, or cut it off.

The point is, Keith, what's happening is, FCC is finally waking up and reporting for duty. Sure, folks don't believe that--and rightly so--because FCC has been AWOL for a long time. It was Mr. Kennard, former Chairman, that responded to complaints from citizens, organizations, ARRL (the 10 meter issue) and jump-started the renewed effort. Mr. Powell intends to carry this onward. This, from Mr. Hollingsworth a couple weeks ago during his forum at the Spartanburg hamfest. Amateur "busts" have slowed down so that he now only reports on these every two weeks on www.rainreport.com. The next promise he made two years ago, the emphasis on getting illegals out of 10 meters, is now underway. Already he has hit some renegade hams for "freebanding" as well as unlicensed operators, AND some in the 10 meter band. He upheld a NAL (notice of apparent liability) for $17,000 against a gent up in/around Pennsylvania for using high power, modded rigs, etc. Seems they hit him in January and he ignored it. If he had responded in a timely manner the penalties *may* have been reduced. As of the 1st of April, he had 30 days to pay it. "Rabbit Ears" in Fla went to jail for a time--haven't heard more on that one.

Unlike the "Anti-KeyClown" fellas, I am trying to help by only posting news that *may* assist one in determining if, with these turns of events, it is really worth it to operate out-of-band, use modded rigs, amps and the like. I am not here to cause arguments. IMHO, doing such now is like Russian Roulette. You are playing with different odds than 2-3 years ago when FCC was asleep. You *might* not get caught, and, if not, all well and good on a personal level--as long as it is somebody else that's getting popped for $17,000, or $10,000, or even less. But *if* you happen to be the one they hit, it suddenly becomes VERY personal, and, indeed, a huge crisis--at least it would be for me! I don't HAVE that kind of money in any case, much less to have to come up with it in 30 days! With the new tracking technologies, they no longer have to cruise the neighborhood, initially, they just sit up in Maryland and DF you--THEN send out the blue suits to visit you! Mr H told me on a

one-to-one basis at the hamfest that they actually sit around the office
and take bets on which of three nearby houses it's coming from--even if
it's 2,000 miles away! The new stuff still amazes me.

Best 73, and no flames are meant by this post, nor is it directed at any
particular individual.

Leyland, I think you may just be correct on showing the ticket before buying the product. As we know, the FCC has largely abandoned enforcement for a good number of years. Also, it wasn't that awful long ago (or was it) that you needed a license to operate a taxicab radio, operate a television or radio broadcasting station, or ... well, you get the idea. It was around the early 80s (I think) that the FCC did away with the 1st, 2nd, and 3rd class radiotelephone operator's license. Hmmm ... come to think of it, didn't you use to have to get a license to use marine radios? (I think you still do for certain channels and certain classes of ships - but nowadays anyone can buy one and just use it. A coworker bought a boat and a radio and was happily checking the radio out from his driveway).

This whole spectrum thing is getting more and more interesting every day. Now, in addition to the cellphones, satellite televisison, and others - here comes digital wireless cameras. Kodak recently unveiled their system using 2.4 GHz. The FCC will have to regulate and enforce or we will have the electromagnetic equivalent of removing all traffic lights and signs from all of our roadways.

I do have one question. What the heck service did that guy have running into his house? Normally, a 200 amp service is the maximum that a utility will supply to a residence (and single-phase at that). I knew a guy back in the 60s who had a homemade amp driving a BIG homemade amp in a fruit cellar. The thing idled at over 3000 volts at around half an amp! He tore the thing apart and got rid of it because he learned of two investigations - one by the FCC (someone in Canadagua, NY, tipped him off on that), and the other by the local utility. Running multiple tens of kilowatts on SSB causes strange flickerings on lights in the neighborhood (going from 30 to 150 or 200 amps on the service, in sync with his voice and plate current, must have drawn down the other homes on the secondary of the same pole pig).

I've heard others brag about running over 20 K watts carrier output, but that implies 30 K or more input. Add the losses in the power supply, and you're starting to push the mains going into your house pretty hard.

73 from Rochester, NY
Jim (running a HUGE 2.5 watts on 440 MHz)
(ps those darn alkalines do pretty good though)

Leland,

I fully see your point. For me, I have mixed emotions about not being able to modify ham rigs for other services. On the one hand, I agree with you, on the other I don't. If that were to occur, it would work a hardship on many volunteer communicators such as CAP members, for example. In that particular case, the rigs have to have closer tolerance than a regular rig. *Some* ham rigs can meet this requirement with the addition of the TCXO option. Others can't meet it at all. We in CAP have a list of HF and VHF gear that meet these requirements. Some members aren't even hams. But they have access to USAF frequencies, and many of us use modified ham rigs for these frequencies. If rigs were not able to be modified, then the cost of dedicated mil. spec. radios such as Harris, for example, would become prohibitive. That would hurt the CAP SAR capabilities since many members buy their own equipment. Most CAP-owned HF gear is Motorola @ around $1800 a pop.I can buy a TS50 (approved) for $799.

I think it should be required to show a license, or authorization letter to buy ham gear or have it modded for other uses. I can't see how this would harm hams' rights. I am also dismayed that many hamfests offer radios as prizes and allow non-ham, or other unauthorized users to win them. A cash prize, even if it was less than the value of the radio, would suffice. Some clubs used to do this very thing, but it seems to have fallen out of favor for some reason.

BTW, have you ever actually modded a 706? Heh, I did my first one, but that will be the last! Even with a lighted magnifier, I had a time seeing those tiny components. HRO, AES, Communications HQ will do the mods BUT! You have to show a license for the service you intend to use it for before they will do it. I let Comm HQ do my MKIIG because by the time I finished the mod on the original 706, I was nervous as a cat!

> used in the spectrum that they are accepted for.

Key words here... "out of box" But heck... "Out of box", my old computer
was only 233Mhz, but then I upgraded and made it 333Mhz.

>
> 3. Modifying a transceiver type accepted for one radio service, to a state
> of capability in another, non type accepted service, is ILLEGAL.

-- Where is the regulation on this? Please specify....

>
> 4. The HR 2510 is type accepted ONLY as a 10 meter transceiver. Ergo, mods
> to this radio that make it capable on 11 meters or any other frequencies,
> are ILLEGAL.

-- Gee... So, being a HAM myself, if I were to make my own radio what you
are telling me is that I won't be able to use it because it's not type
accepted? That's funny because the idea of HAM radio to begin with is to
set aside frequencies for experimentation and whatnot.

Look... It's quite simple... The modification of the radio is *>NOT<*
illegal. The *>USE<* of that radio on frequencies the operator is not
licensed for IS illegal.

Put it to you this way... Take a Cobra 2010, modify it for use in lower 10
Meter band. An amateur operator licensed for 10Meters is perfectly fine
using the unit there.

It's not the radio... It's the operator and where they are transmitting that constitutes an infraction of federal regulation.

If it were the radio, then my old Packet radio setup on 70cm would have been illegal since the crystal radio that I built for use with the MFJ TNC modem was not "type accepted"... HOWEVER!!! As an amateur I am allowed to make/build/modify/test/operate with no problems whatsoever.

Your argument about modifying the 2510/2600/Lincoln and it being illegal is just as rediculous as saying, "You can't put that cam in that engine!!! It's illegal!!! It didn't come "out of box" that way."

So, nice try on inducing some paranoia to the uninformed... But you are partially right on one thing, and one thing only. TRANSMITTING with a non type accepted radio on 11Meters is a no-no. You can receive with whatever you like. Scanner, custom built crystal set, etc... It's the ACTION of TRANSMITTING that steps over the boundaries of FCC Regulations. So the RADIO is *>NOT<* ILLEGAL... It's the person performing the action.

Let me ask you something... Are you one of these liberal types who likes to take responsibilities of the individual and associate them with inatimate objects? Seems you're blaming the tool instead of the operator.

Says the burglar to the judge, "It wasn't me that broke into the house your honor, it was the lock pick set!"

Now following your logic using the above example, the obvious conclusion would be to make lock pick sets illegal. Let's take this further.

Says the burglar to the judge, "It wasn't me that broke into the house, it was the axe."

Now make Axes illegal... Ok... One step further....

Says the burglar to the judge, "It wasn't me that broke into the house, it was my steel toe boot!"

Now make steel toe boots illegal... Ok... One step further....

Says the burglar to the judge, "It wasn't me that broke into the house, it was the brick that went through the window!"

Now make bricks illegal...

See how it doesn't hold up? First you put the locksmiths out of business. Then you made it illegal to chop down trees or split wood. Then finally we all were forced to wear canvas high top sneakers. And then finally you caused millions of people to be homeless because the bricks had to be taken out of their domiciles causing the failure of structural integrity and hence the condemnation of their property.

I'm not going to take this any further into your confused emotional unstable colluded unfocused and warm fuzzy logic. I say this... Hold the burglar responsible and we all have liberty. Hold the tool responsible and we lose our liberties.

Enemies of the people are easy to spot. You just have to be able to recognize their flawed warm fuzzy logic.

HONEST!!!! Wasn't me!!! If I didn't have that tire iron in my trunk I wouldn't have hit him over the head with it! (N8WWM as Judge, "Ok, you're free to go. Martial law for everyone! It's the only way to protect them from each other.")

Baltimore Driving Rules

1. A right-lane construction closure is just a game to see how many people can cut in line by passing you on the right as you sit in the left lane waiting for the same drivers to squeeze their way back in before hitting the orange construction barrels.

2. Turn signals will give away your next move. A real Baltimore driver never uses them. Use of them in Towson may be illegal.

3. Under no circumstances should you leave a safe distance between you and the car in front of you, or the space _WILL_ be filled in by somebody else, putting you in an even more dangerous situation.

4. Crossing two or more lanes in a single lane-change is considered "going with the flow."

5. The faster you drive through a red light, the smaller the chance you have of getting hit.

6. Never get in the way of an older car that needs extensive bodywork.

7. Braking is to be done as hard and late as possible to ensure that your ABS kicks in, giving a nice, relaxing foot massage as the brake pedal pulsates. For those of you without ABS, it's a chance to stretch your legs.

8. Construction signs warn you about road closures immediately after you pass the last exit before the backup.

9. Electronic traffic warning signs are not there to provide useful information. They are only there to make Baltimore look high-tech, and to distract you from seeing the state police radar car parked on the median.

10. Never pass on the left when you can pass on the right. Merge lanes are always good for gaining two or three cars.

11. Speed limits are arbitrary figures, given only as suggestions, and are apparently not enforceable during rush hour.

12. Just because you're in the left lane and have no room to speed up or move over doesn't mean that a Baltimore driver flashing his high beams behind you doesn't think he can go faster in your spot.

13. Always slow down and rubberneck when you see an accident, or even if someone is just changing a tire.

14. Throwing litter on the roads adds color to the landscape and gives Adopt-a-Highway crews something to clean up.

15. It is assumed that state police cars passing at high speed may be followed in the event you need to make up a few minutes on your way to work, or the beach.

16. Learn to swerve abruptly. Baltimore is the home of high-speed slalom driving thanks to potholes.

17. It is traditional in Baltimore to honk your horn at cars that don't move the instant the light changes.

18. Seeking eye contact with another driver revokes your right of way, except in Glen Burnie where it acts as an invitation to duel or play chicken.

19. Never take a green light at face value. Always look right and left before proceeding. In Baltimore it is common to stop and then decide which direction to turn.

20. Remember that the goal of every Baltimore driver is to get there first, by whatever means necessary.

21. Real Baltimoron female drivers can put on pantyhose, apply eye makeup, and balance the checkbook at seventy-five miles per hour during a snowstorm in bumper-to-bumper traffic.

22. Heavy snow, ice, fog, and rain are no reasons to change any of the previously listed rules. These weather conditions are God's way of ensuring a natural selection process for body shops, junkyards, and new vehicle sales.

The only solution is to try and keep them *near* the CB channels
and out of other services. People that don't want ham licenses
will always chase DX near 27 MHz and use it for trucker to trucker chat.
So if the FCC clamps down on export radios and starts fining CBers we might
see a change, but the problem is that the only time CBers are a problem is
when the DX is good or if they run a bad amp and disturb the neighborhood.
I first got interested in ham radio as a 14 year old when me and a friend
started working DX and then I worked Australia and I was hooked. When the
DX died I obtained my ham license at 16.
I don't look down on CBers because I operated bootleg on 27 MHz with *uppers*
and *lowers* and understand why they want all those *extra* channels, of
course back in the late 70's you were lucky to get 10 to 15 *extra* channels.
However at that time we didn't dare wander into the ham bands because it
would only mean trouble, one Cber in my neighborhood did and the FCC Detroit
field office gave him a telephone call. So if the FCC starts keeping the
CBers near 27 MHz then I think the problem will be *contained*.

Last year Congress passed some legislation allowing states to regulate CB's
and I don't know if that became law, but the States don't have anything like
a FCC and the police are to busy dealing with robbery, murder and other
crimes to have any effect. The only time the States will get involved is if a
neighborhood starts complaining about TVI/RFI with a Cber that "has the
right" to disturb the neighborhood's TV screens under the Free Speech Clause
and his Federal Liberty Patriot CB license issued by the same people that
issued "Liberty Bonds and checks".

The only thing hams should be concerned about is when CBers use the ham
bands. If the CBers are operating somewhere else then that is a
government problem. Running around rec.radio.cb screaming criminal Cbers
isn't go to do anything, but make you look like a fool. At worst a extended
CB peaked out at 25 watts is as bad as a parking violation. Operating on the
ham bands is like littering while a cop is watching. Interfering with Police,
Fire or Ambulances radios is like driving your car through a red light
yelling, "Come get me, I want to do hard time in prison!". That is exactly
how the FCC looks at it.

I don't care what CBers use on 11 meters, as long as they don't come on 10
meters and trample on my QSO. It is a government problem not a ham problem.
They can run a 1 KW station on 27.990 and I don't care. If the government
doesn't do anything then I guess the government doesn't give a shit.

> And considering you worked for the FCC we have a good idea why 11m is so screwed up now.

I never worked for the FCC, I just posted a story by someone that worked for
the FCC.

Hey whats wrong with whackos? They provide lots of comic relief.
who would we all have to laugh at w/o the whackos?

I know there are some people that will probably try to twist the
following around, but who cares heheh.

True experiance. I used to manage a group home for people with psych
problems, scarey huh kinda like the blind leading the blind :P . Anyway,
there was a client that lived there everyone called him "Smokin` Joe"
all he did all day was walk around in a daze, smoke, and relive his life
experiances through his 27 different voices/personalities. I've seen
this guy smoke a pack in less that 40 minutes. Smokin` Joe would always
say or do really twisted things and make everyone bust a gut laughing,
like one time (I'll never forget this as long as I live) I was in my
radio room in the basement talking to some of the locals on Ch. 13,
Smokin` Joe came walking past the door to my radio room talking at full
voice (at full voice you could hear him for 3 blocks), he was talking
about how he once had sex with a pig and now has kids. I had the dang
mic keyed when he said this. I let go of the key and laughed so hard I
knocked my coffee off the desk, and all the locals keyed up and were
laughing too because they all knew Smokin` Joe and how he was. (he is in
a perpetual fog from drugs)

Another time he was arrested for urinating in public, I guess he really
had to go, but heck he had JUST left the house, anyway they took him to
jail while waiting to go to court, they sentanced him to 30 days gave
him credit for time served, and suspended the rest. Thirty minutes after
he was released from the courthouse, he was arrested for urinating in
pugblic again!!!!

Yes I have a demented sense of humor, I once took a bottle of skunk
scent to school and poured it on a shop rag and dropped it down the
ventilatioj system outside the school office. So the whackos of the
world make me laugh. Next election I am going to write in Wierd Al for
president. he sure as heck can;t do any worse than any we have had the
last few years.

After nearly 50 years in the hobby (I predate CB) I have come to essentially the same conclusions. But I do question whether the outlaws of today are not a bit different breed than the 70s when you got in and I produced well over a dozen Amateur tickets from the outlaw CBers I got to know. We seem to have far more Rebels Without a Clue.

Local government is permitted to enforce certain sections of FCC rules, frequency and power primarily. As you say, this will happen when Mrs. O'leary calls the Mayor and bitches about RFI.

Everyone is looking for the private, quiet, or company channel. Similar things go on on Marine freqs all the time. Can't blame them really and no one appointed me to the Police Force.

Great. Then limit your comments to that topic. And when someone else
posts something that you don't think hams should be concerned about,
keep your mouth shut.

> If the CBers are operating somewhere else then that is a
>government problem. Running around rec.radio.cb screaming criminal Cbers

Why are you so concerned about others looking like fools when you say
hams should only be concerned with CBers that use the ham bands? Why
should you get so defensive when everything in my post agrees with
your opinion about CBers using the ham bands?

You sure are one mixed-up troll.

From: Fukingruvin <lgsast@strato.net>
Message-ID: <9dsfvb$js38n$1@ID-20128.news.dfncis.de>
Source record: 81981

The SWR meter function is activated by pushing the SWR button.
Pushing the SWR button toggles between Signal Strength/Modulation function
or SWR
function.
I assume you have the old style 2950 which i also have. Depressing the reset
button
on the CPU may help if nothing else does.
Do not leave the radio turned on without power being supplied to the cord,
this corrupts
the memory and will damage the CPU. Many times after being damaged in this
way
the display will light up but nothing will show on the screen. Use the Heavy
Guage
power cord that came with the radio or get one from R/S. These radios are
current
hungry little monsters. My 2950 is heavily modified and runs off a Astron
20amp
power supply, RG-8/X coax, Antron 99 and the microphone of choice is the
Astatic
D-104 element. I will shut-up now and let you fix your Ranger.....

My ex father in law has a 600 amp service. He has what is
called 'demand side servicing' (I have it too, but only at
200 amp). The power company charges me different rates
at different times of the day. My meter 'talks' to the power
company, and then forwards that info to a computer in the
basement from a company called Steibel-Eltron. When
power is cheap, I suck all I can from the pole and charge
up heaters. The heaters are full of ceramic bricks that will
stay warm for a few days. Thermostats on the wall don't
turn the heaters on and off, they just turn on little fans that
blow air over the bricks.

Mike

The fact is perhaps a handful of operators are using 25 watts the rest are using 1kw+ and much bigger amplifiers on 11 meters. Thats a fact Jack. I know we will get 100 post from guys saying they run stock radios . Bullshit.

Well Leland, must say I respectfully disagree with part of your statement. Not ALL of us CBers are abusers, many of us would like to see tha bands clean as much as the ham operators. I will be taking my test to get my ticket shortly, but I still have my roots on 11 meters, and I have alot of friends on 11 meters, many on 40 LSB and 38 LSB and on channel 2,8,13 here in n.w. ohio. These people I call friends are not into running power, we just want to talk to our friends in the evenings, the crap they have on TV isn't worth our time, so we converse on the air. Sure we may spend many nights talking until 3-4 am about the wierdest things. But it is good clean conversation w/o the name calling, and expressing our opinions on who has what sexual preferance that a few people have resorted to here.

makes me wonder, if they are conducting themselves that way here, how are they on the air? They darn sure are not any better than the people they are complaining about. A HAM ticket is not a certification that you are god, it's no difference than having a CDL, I can drive my car, a pickup, or a motorcycle with my license, I haven;t got the authorization to drive a semi. does that make a semi driver a god? above all others? No. I am not saying that truck drivers are not special people because lets face it, W/O truck drivers this country would come to a screaching halt in days, EVERYTHING we have in this country is delivered by trucks,

sure there are trains, but does your corner gas station have a rail yard? does your local grocery store have a railyard? No. But just because they are a truck driver does not give them special priviledges, if anything it is the opposite, truck drivers put in the most hours for the least pay of any profession in the US.

Hrmmmm somewhere along the line I lost my point heheh, maybe I need to get to bed, got roused out of bed at O-Dark-Hundred (very early AM) to a house fire in s.w corner of the county, and have been on the go ever since, and now it's raining cats and dogs again on top of the 2.5 inches we had this morning, so tomorrow will be another long day as the flash flood warnings are already up. Disaster services can ve very tiring, but the look on the young childs face this morning when I handed them a new teddy bear after his families house burnt to the ground makes it all worth while.

I am outta here

'73 to you and yours from me and mine

==========
I don't agree with posting the same message 8 times, But Twistie, and a
select bunch who have confronted doug & co do the exact same thing that they
are blaming dougs group for false, inflammatory, humuliation, and
harrasment. Ever hear the word hypocrite I believe that fits the bill.

==========
Just as the behavior on the CB band give cbers bad names and makes everyone
look bad.

> If you're giving access to a group of people that can't otherwise
> afford the cost of the connection, the person to blame is the spammer,
> not the rest of us that have followed the guidelines.
==========
Kinda like the CB band again, blame the freebanders, power hungry ops etc,
for making the rest who do follow the rules look bad and have to pay the
consequences.

> We observe a simple process of courtesy, as a right to express our own
> views while following a TOS agreement we agreed to be bound by when we
> signed up. That is why we are still out here.
==========
Same with the 11 meter band when you pick up the mike you agree to be bound
by the FCC's rules

>
> Other things to notice, we stand up to our right of free speech just
> as loudly as those whom wish to silence that same right because of a
> conflict. If you can conduct yourself under the TOS agreement, then

> discuss it, not spam it.

==========
People are trying to suppress Doug and co because they don't agree with what they have to say, Whats the next best thing Get him kicked off his Isp so we don't have to hear him break our balls anymore. Perhaps he should change his method of posting. And I am not saying I agree with his method of abuse, but the fact that the hypocrites who cry about doug tryuing to silence them because they are Law breakers turn around and try and now want to be Rule and law abiding people. I don't think so

>
> > Don't blame us for the problems with that 1 person, you're forgetting
> the point that the rest of us are willing to agree to. A TOS that
> binds the user to a set of rules, or conduct - as set forth by the

==========
Who is Blaming anyone? Have I blamed anyone or Us as you say? I am not forgetting any point. Your talking,selling, trading illegal equipment is in violation of most all isp rules so don't try to give me the high and mighty act like you and the rest of the bunch are saints.

>
> Blame the guy that posted the threats, not us for informing the ISP of
> the violations. You didn't do it, someone had to. Now you're stuck
> with the lack of access because you didn't stand up for your right to
> have access.
==========
Again Kinda like the 11 meter band, blame the freebanders and the power crazed people, when we lose 11 meters or have to be abused by the local cops, not the guy who is against it. You didnt do it. Now your stuck with the lack of a usable band because you didnt stand up for what is right. >

> You mentioned innocent people being affected. We all are being
> affected by this.
==========
Exactly, but they are losing the right to post altogther, you can filter the posts you dont want to read big difference in my opinion.

>
> We have had this problem in the NG for several years, and you think
> that we are the bad guys? Is there something skewed here? What about
> us that follow the rules and try to help when we can? Are we the
> problem? Please re-think your statement below...
==========
Where did I say anyone was the Bad guy, the only thing that is skewed here is you trying think for me and put word in my posts. What about us that follow the rules? which rules do you follow NG rules? What about the Cb rules Maybe you personally follow the rules of your isp but the bunch of guys who have at it with doug and friends don't and are just as guilty as he is perhaps not of multiple posts but foul, threatening posts, harrasment, name calling, etc etc Am I to think you are all Choir Boys Not hardly. The whole point is they can say nana nana I got Doug booted off his isp, Thats

all it is a game. One upmanship.
Why didnt they care about the illegal information that passes thru the NG,
why not turn those that discuss it in to there isp's. because the could care
less about the Integrity of the NG. Go sell your story to someone who doesnt
know any better. I have been there and done that, and i know what its about.

As far as I'm concerned the FCC can pull the plug on 11m completely. The truckers can then use either cell phones or GMRS radios to do their thing, for the rest let them use FRS radios. The chief difference between Ham and CBers are the Hams are most interested in keeping the bands cleaned up, whereas the CBers are most interested in expanding the mess on 11m in to every corner of the radio spectrum they can get away with.

Go to QRZ and read the story about Chris (N8UDK) and his ATV repeater. My apartment is just a few miles east of that machine, and Code Alarm is just a mile east of me. I drive by Code Alarm everyday on my way to work. I have picked up his shuttle retransmission's using a handheld LCD TV. Where I'm at the quality of the signal is nearly perfect, both audio and video.

http://www.qrz.com/article.pl?sid=01/05/12/0945203&mode=thread

I hear about manufactures who design products that work on some of the Ham bands, and they know it is a Ham band too, then wait and see if anybody complains. In the case above I suspect the shoe was on the other foot. A quick check with the FCC would have provide all the information the chief engineer needed, and I just can't believe nobody checked.

As you can see 2.4GHz is not the only band with a problem. I also have a Ramsey Electronics Kit catalog that has several items that claim they "operate in the license free 433 MHz band". Go figure that one out.

Richard, I think you hit the nail on the head. Similar to local laws (not radio related, but similar). There are speeding laws and tend to be enforced if you are going 10 mph faster than the posted limit. Same with going the wrong way. Laws ARE enforced for drunk driving. Although there are ordinances against loud radios and horns, they tend not to be enforced - simply because they are not endangering others in a way such as drunk driving. As to the radios, a 25 watt linear is illegal, but is likely not doing a lot of harm (the kilowatt plus stations, of course, cause interference a long ways away and attract more attention). Out of band is not legal, but unless you are interfering at that time with another service you may or may not get a ticket. It isn't so much legal vs illegal, rather it is how serious it is vs how much money you're (or is that we're?) going to throw at problems. Of course, if a whole lot of neighbors start raising a rucus about interference, then things can get warm at the local level. Amateurs have learned that although interference is not necessarily their fault, it is a whole lot easier getting involved in a friendly manner EARLY - before the situation escalates.

No I have not. I would consider giving it a try if my work QTH used surface mount components however. That way I would have the desoldering tools required so as not to bugger up the PCB artwork.

> Heh, I did my first one, but

That's understandable. The other Ham I know that has his 706 mod'ed had it done by a local radio repair shop where the guy had a lot of experience working with surface mount parts. Nothing worst that pulling your soldering iron back and have the circuit trace still stuck on the tip!

:>DC output? I thought you got RF out which is AC, not DC. Maybe you mean
:>DC input, you know, plate voltage X plate current. Just how did you
:>measure DC output?

: Before the early 80's you measured the DC input voltage and you could not
: exceed 1000 watts. These were the tube days, son. Later in the post the FCC
: engineer corrected his statement.

Actually, you measured the DC input voltage and current - to get the input
power. Output power was measured directly, as it is done today.

In those days, an unmodulated carrier was called DC. Not really correct,
but everyone knew what was meant.

A first rate whacko is a joy. I change the wallpaper on my compooter regularly; the one before the current one was a surrealistic painting from an art school in Harlem. The current one, celebrating my Bohemian ancestry, portrays the Defenstrations of Prague. When things got quiet in Central Europe, somebody important went out thru a window. Sounds like fun to me.

The insane is troublesome but the surrealistic is fun. Catch 22, Kurt Vonnegut, flexible watches forever.

Hello & Good Evening Big Guy,
I have to disagree with you. If they just posted
"you're shit's illegal" Then nothing can be said to
their ISP about it. But when they post, 5 to 20
times, with a header that says something like
"Get That Fucking Illegal Shit off this Newsgroup,
you piece of dogshit" Then in the main body it goes
like this: "You're nothing more than a Illegal child
molesting faggot, get that crap out of here before
I turn you in, you Fuck wad"
Now there has been a two times that I can see,
that I have used maybe half that type of language
in the main body, but never in the header as far as
I can remember.
I have never flooded the newsgroup with that
type of post, and that really is the crux of the
question, isn't it?
You know you can't have you're ISP pulled
if you're not doing anything against their rules,
correct?
Well enough said, have good day, and a
pleasant tomorrow.

The story is fake. There is no such thing as DC output. Power is sometimes
measured as DC INPUT to the final, never DC output.

Thank you Doc for being open minded
about these touchy subjects. While I can
respect your opinion on legalities, I have,
in the past and maybe in the future will
transmit illegally on the 11 meter band.
But that doesn't mean that we can't have
a respectful discussion concerning these
types of issues here.

Hello & good evening,
While running an amp is illegal, you
may have problems with an 8 pill
in that set up.
You shouldn't have any problems
running a 4 pill, but any bigger than that
you will probably have to beef up the
electrical system.
Use the old system of divide the wattage
by the voltage to find out how many amps
you will draw. After that find out what kind
of charging system you have, will it cover the
amount of amps you are gong to draw. With
that said, you will then have to decide if you will
need another Alt, or run a batt set up to
compensate for the amperage draw.

Hope that helps you on your decision.

Hello Sir,

Despite this person saying it's
illegal and then advising you
to go ahead and commit an
illegal act (e.g. use a 4 pill)
you should not use an amp
on CB at all. There are stiff fines
for abuse of FCC rules. If you
put the 4 pill on CB as this
person clearly advises you
to do you will be abusing FCC
rules and also abusing your
fellow CBers, many of whom
do not run illegal output power
and will be inconvenienced
by your excessively powered
signal.

Thank you,

J. Piolrett

I didn't want to imply that "all CBers are a like", so if that was the way it sounded it was not my intent to do so. The way Keith talks I think he's as much a part of the problem as anything else.

>I will be taking my test

I hear some conversations like that, but the vast number sooner or later end up using the "Fxxx" work etc., along with other colorful words, in every other sentence. I still remember one night where some 18 year old guy was trying to pick up a girl for a date on channel 40 one night. There was a older guy on that channel who made a few suggestion to the girl about being "careful" where upon the 18 year old guy told the older gentlemen to "go beat your wife old man". Hummm.... I wonder how long that kid would have lived if he had told his father that.

> makes me wonder, if they are conducting themselves that way here, how
> are they on the air? They darn sure are not any better than the people
> they are complaining about. A HAM ticket is not a certification that you
> are god,

That's correct, however if Hams don't conduct themselves in a proper manner we run the risk of losing our license, and thus the right to use the Ham bands. On the other hand CBers have almost nothing to lose so many of them don't value the ability to operate radio equipment to communicate over the public air waves. If you haven't noticed when this point is brought up on this news group one or more posters are quick to point out that the FCC doesn't do any enforcement so they don't feel any need to play by the rules or anything else for that matter.

My comment about pulling the plug on 11m by the FCC, or even serious talk by the FCC of doing so, will put some value back in to the equation. When it becomes clear that they, CBers, could lose the complete 11m band directly due to various illegal activities, then the motivation to clean up the band will take root. Nothing like losing something to realize the value of what was lost after the fact.

It's due to people like you doing public service that can make all the difference in the world to somebody. You deserve a hardy "Thank You". Good luck on your license exam too.

Bill:
you asked:
<Does the rig compute the SWR or get it more directly?>
All I see is one bar coming up on the indicator like it has a proper
match. Is that what you were asking?
The SWR's that I listed before were off a BIRD meter.
M:)

Source record: 82015

Well, maybe that is where I have a problem. I have the system set up so
that the radio only comes on after the engine is running. I usually
leave the radio set up on my standby and have left it there ever since
day one in the "on" position. The radio works normally, just the darned
SWR indicator stays lit up and all I get is one bar coming up on the
indicator.
I know that these are amp hungry monsters, and I have 10 gauge wire
running from a relay (that gets activated after the engine is running)
to the radio which is located in an overhead console (tight fit). That
distance is less than five feet on the positive side. The negative is
tapped directly to the "A" pillar which is about 18" and I do not find
any voltage drop with this configuration.
What is the difference between the old style and new style 2950's? Is
there something physical that will denote them from each other or is it
by serial number?
Thanx again:
M:)

Before you purchase your amp, I would suggest taking a look at the FCC's website. Enforcement is picking up, and the fines are typically thousands of dollars. As soon as you key-up your equipment is subject to search and seizure without a warrant, and refusing to allow an inspection by the FCC can increase your fine by thousands more. It will also hurt your ability to get any other license that can be issued by the FCC if you should ever choose to apply for one.

Please research the consequences before you take the risk.

By your own admission, you have transmitted illegally in the 11m band,
and might do so again. Why should you be concerned if somebody else
breaks the rules here?

> You know you can't have you're ISP pulled
>if you're not doing anything against their rules,
>correct?

And you can't get a hefty fine if you are not doing anything against
the FCC's rules. So why obey the ISP rules and not the FCC's? And why
do you complain when someone breaks the rules of their ISP, but you
feel nobody should complain when you break the rules of the FCC?

I agree with you to a point. There will always be people that will
commit murder if they think they can get away with it. And they are
quick to accuse others of the same, or shift the blame on society.
Those people won't take anything seriously until there is some
personal accountability for the actions of the individual. I think
bringing back CB licenses would be a step in the right direction (for
several reasons that I won't bother to list here).

Accountability is done not only by law enforcement but also by the
feedback the individual receives from the community. In other words,
act towards them the way you would want them to act towards you. If
you don't, then they will make -you- behave as badly as they do. If
more people took that little bit of positive action, instead of
responding to them with the same moronic attitudes, the band would
improve in very little time, and much faster than any LEA can change
it.

I know, I hear it already -- "Hey Frank, practice what you preach!"
hehe...

again, not that many people are losing out, as the onlyones I have EVER
seen p[ost from that newsprovider was doug. and newsranger is not a full
service ISP, they are a news/mail provider like mailandnews.com, or
easynews.com. And there are dozens more like them available so everyone
can easily change mail servers in a matter of minutes and not miss out
on a thing so your argument is flawed. And let's compare this to the FCC

regulations, Lets say that spam/flooded posts are TVI, who's at fault?
the lady who just wants to watch the news? or her neighbor who is
running all kinds of power? Who's job is it to fix the problem? It's the
responsibility of the person causing the harmful interferance, in this
case that would be the news server that is carrying the posts to the
internet. `nuf said.

I follow cb rules AND internet rules, and what do I get for it? Dougie
and his bunch slander me, and the public service organizations I work
for, REACT and the American Red Cross. Ever hear of slander? I passed
their remarks onto the organizations legal departments, who were not
happy. Perhaps thir isp's and news providers decided to drop the
abusers, because as a point of law, if they had not done something to
stop them, they could be named as a co-defendant.

What about running 4 gauge wire to both battery terminals, and using
good coax.

The story more than likely is a fake for no better reason that dead maximum
AC input to a house is about 48 kw. But I prefer beating it to death with
facts instead of dictionaries.

Once the FCC gets a hold of them there are good for nothing. My bother and I checked in to what is done with all of the equipment the FCC "collects". We found out that 100 percent of it is destroyed so it can't be resold. The FCC Detroit field office throws everything they get in a car crusher. And no they would not disclose the location either where the work is done. So you don't even get the option to go trash picking either.

They, FCC, required licenses at one time, I had one, but of course not now. I think a little change in how licensing is done may help. For example requiring proof of license BEFORE buying a radio, not after. You get your license yanked, no more buying new radios. You get nailed selling a radio to an unlicensed person you also lose the license. That would quickly dry up the market for used rigs being sold to unlicensed people. In sort there has to be something of value to lose before the value of the privilege of operating a two-way radio is understood. For example I know that many Radio Shack stores will not even allow a customer to touch, unless you show your Ham license first, one of the Ham radios they sell if there is chance it will transmit on the air. I'm sure that it is a corporate policy to keep them out of hot water with the FCC. Now extend that to CB radios and soon people will get the message. Some accountability has to be put back in to the system if there is going to be any hope the mess will get cleaned up.

try using a manual antenna tuner inline with a dummy load - see if you can tune the light "out".If you can see what the swr reading is at this point. It may give more information towards a repair.
cheers
"Michael Willey" <photog101@mailhost.det.ameritech.net> wrote in message news:3B018643.628DFB08@mailhost.det.ameritech.net...
I have an RCI 2950 and the SWR indicator light stays on all the time.
Does anyone have any idea as to why this has just recently started to happen.
This is in a mobile application and the SWR has been checked with a BIRD meter which shows 1.2:1 @ 27.185 mhz. I have tried several different antenna systems and I still have the same problem with the SWR indicator. I have also tried to use a 100 watt dummy load attached directly to the back side of the radio and the same results.
Some one told me to reset the radio, but I am not sure that this source was reliable.
Thanx in advance:
M:)

> about an adrenaline rush!)

This is where you lose it in the credibility department. I know the FCC
uses calibrated commercial grade equipment capable of making precise RF
measuremnents. So with that in mind, I want to know how a jump from 1000
watts to 25000 watts, which should only result in about a 14 db increase
in signal,
somehow mangages to appear as a 40 db jump in the Spec an's reference
level? for a 1000 watt signal to jump an honest 40 db you would need to
be running 10 M (as in MEGA) watts. For those who don't know the math,
every time you increase power by a factor of 10, you increase 10 db.
1000 X 10= 10,000 X 10= 100,000 X 10 = 1,000,000 X 10 = 10,000,000.

I find that to be a HUGE mistake (or a bit of embellishing) for someone
of a trained technical background to make.

I still remember one night where some 18 year old >guy was trying to pick up a girl for a date on channel 40 one night. There was a older guy on that channel who >made a few suggestion to the girl about being "careful" where upon the 18 year old guy told the older >gentlemen to "go beat your wife old man". Hummm.... I wonder how long that kid would have lived if he had >told his father that.

We had a similar situation happen here but it developed into a realy bad situation, there was a young man who went by Cobra on CB, he lived across the street from me, I helped him se up his radio. It wasn't anything fancy, a 23 channel cobra 29 with a mobile whip mounted on the peak off the gable end of the roof. All he wanted was to just talk with all of us.

A new family moved into town, the father had a base setup and he installed a mobile in his sons car, his son started driving around and threatened to rape "Cobra" now mind you "Cobra" was only 13 years old. Naturally this upset him, as well as all of us who looked after him on the air. Some of our local regulars on Ch 13 are hams, who have helped many of us on many occasions. I called one of them, and we had I guess what you might call a fox hunt. We didnlt use any fancy DF equipment, just the mobile radios in our vehicles in conjunction with 2 bases with beams, we all had hand held CB's to communicate with eachother on alternate channels.

When we located the culprit, we contacted the police, one of the officers "Lt. Wolfman" liked to hang out and BS on Ch. 13 when he had a slow night. So "Lt. WOlfman" had heard all the threats on the air, we had recorded the tape, and this officer went up to the door, and the kids father came to the door, he played the tape for the father, and he went upstairs and grabbed his son and drug him downstairs. He made his son apologize to "cobra both in person and on the air, as well as apoligize to all of us that he had offended with his comments. His father then went on to sell his sons radios, as well as his sons car. He said that driving and talking on the radio are responsibilities and not to be taken lightly, and if he wasn't matue enough to do either responsibly, he wouldn't have the priviledge.

Five years have gone by, I ran into that young man who was making those threats. He is now a mature young man with his head together, he is a sgt in the army, working with radio communications.

<snip>

Nothing >like losing something to realize the value of what was lost after the fact.

If I am not mistaken the FCC has done something like that before with the old marine band? Set up jamming stations to render those frequencies useless? Personally what I would like to see is this, make it a requirement that all amateur radios sold in the US to require a license to purchase, and make it that radios can not be opened to "expand" into 11 meters from ham radios, and same for cb radios to expand into the "freeband". Outlaw the sale of "export" radios to those living in the US. last I knew export meant shipping to another country, not within the countries boundaries. Or even better modify the rules for CB, eliminate AM all together, make it SSB only, I haven't played with the FRS radios yet, same with MURS, but it looks kinda interesting. Plus SSB,FM are much cleaner sounding. Oh and I also feel that echo boards should crunched, nothing sounds worse on SSB than some clown running a connex board who is over modulated and echos repeatedly, and then set's his "roger beep" to echo as well. God thats annoying.

I'm going to take the gamble and assume that you've playing the
semantics game. You should know that OPERATING a radio not type accepted
for a particular radio service IS illegal. What would be the point of
modifying a radio if your intent was not to USE it?

> > 4. The HR 2510 is type accepted ONLY as a 10 meter transceiver. Ergo, mods
> > to this radio that make it capable on 11 meters or any other frequencies,

> set aside frequencies for experimentation and whatnot.
>

Well, first off, ham radios do not require type acceptance at all. The
HR 2510 is not a type accepted radio. Which, of course means that it
cannot be used on 11 meters. Hams, and the amateur radio service is all
about experimenting, and as long as you stay on the ham bands you can
use any radio you choose. But, you can't take a ham radio and legally
use it on 11 meters period.

> Look... It's quite simple... The modification of the radio is *>NOT<*
> illegal. The *>USE<* of that radio on frequencies the operator is not
> licensed for IS illegal.
>

Again, semantics. Why would someone go to the trouble to modify a radio
for an illegal use and then not use it? We're all big boys and girls, we
all know what the intended purpose of these "mods" are for. Sure there
are some guys using 2510's as transverter drivers, and that's perfectly
fine since the final radiated output signal is still on the ham bands.
But that example is a very small percentage of the total amount of
modded 2510's out there.

> Put it to you this way... Take a Cobra 2010, modify it for use in lower 10
> Meter band. An amateur operator licensed for 10Meters is perfectly fine
> using the unit there.

But you can't take a Icom 735 and transmit on channel 19 legally.

>
> It's not the radio... It's the operator and where they are transmitting
> that constitutes an infraction of federal regulation.

True, but again, why go to the trouble of making a radio into an
instrument that, when used, would be illegal?

>
> If it were the radio, then my old Packet radio setup on 70cm would have been
> illegal since the crystal radio that I built for use with the MFJ TNC modem
> was not "type accepted"... HOWEVER!!! As an amateur I am allowed to
> make/build/modify/test/operate with no problems whatsoever.

Ham radios do not require type acceptance, so you have no fear in this
example.

>
> Your argument about modifying the 2510/2600/Lincoln and it being illegal is
> just as rediculous as saying, "You can't put that cam in that engine!!!
> It's illegal!!! It didn't come "out of box" that way."

Bad analogy. You can very well be cited for changing anything on a car
that would violate federal emissions regulations. So if that cam caused
the car to emit more pollution than when it was "out of the box", it
would be considered illegal.

Much the same reason that a non type acepted radio cannot be legally
operated on a radio service that requires type accepted radios.

>
> So, nice try on inducing some paranoia to the uninformed... But you are
> partially right on one thing, and one thing only. TRANSMITTING with a non

> you like. Scanner, custom built crystal set, etc... It's the ACTION of
> TRANSMITTING that steps over the boundaries of FCC Regulations. So the
> RADIO is *>NOT<* ILLEGAL... It's the person performing the action.

If that radio transmits, it is an illegal device. The operator is guilty
of operating an illegal device. If a licensed ham modifies a 2510 for
receive purposes only on 11 meters, then that is fine, as long as it
never transmits. But how many people are REALLY only using it for
receive?

1755. RCI-2950 Tips: SWR / MEMORY / PANEL LIGHTS

Newsgroup: rec.radio.cb
Date: 2001-05-16 12:44:08 UTC
From: qrm2000@aol.com
Message-ID: <20010516084408.26058.00000008@ng-bk1.aol.com>
Source record: 82103

If you only see one bar, when the FWD shows several, you probably are okay.

Few serious operates depend upon the built-in SWR indicator. Apparently you have access to quality measuring equipment. Once you are assured that your antenna is right, relax. Check it at least twice a year or if performance seems to have fallen off.

If you are operating the radio into another piece of equipment (gasp!), the radio sees only the match to the other equipment. It may or may not reflect (pardon the pun) what is happening at the antenna.

The old style 2950's have an internal battery to hold memory when power is disconnected. The new ones do not use a battery. That is progress! Batteries are difficult to locate (I have to order them directly from Ranger) and are not easy to install. I have several 2950's as spare's. Even in the attic, they are hooked to a large battery to preserve that #%$* internal battery!

Here's another 2950 tip. You can DIM the display lights using a front-panel stepping switch. Turn the display off in daylight and keep it on low at night. The bulbs will last MUCH longer. The bulbs are difficult to replace.

your a fool if you think yaesu, kenwood, and icom does not openly know and support the fact that freebanders around the world buy there rigs. the manufacturers themselfs would fight tis tooth and nail and it could never suceed. besides how many times have we seen the government so called "pull the plug" on something only to make the problem worse. if they ban the mass import of these radios it will be no big deal because they will smuggle them in like they did tea in the 1700's, rum in the 1800's, and cocaine in the 1900's. the government is not a be all end all organization and never will be unless your a commie red.

wonder who mods all those 706's i hear on the freeband? scary to think that
they are capable of such things themselfs isnt it.

Then there is the guy running 70,000 watts from his van, powered by 8 train alternators spun by a 454 with nitrous.

Resorting to vulgarity is the liberal way... The thinking goes like this:

"I can make myself look better by making other people look bad."

The flaw in the above philosophy is that *>SOME<* people will actually pay attention to the debate and weigh the outcome on evidence instead of the use of vulgarity and double standards. Heck, anyone can use vulgarity to sound tough, but it's fruitless.

Now if you'll excuse me, I have to put a new edge on my axe so I can remove some more ugly stumps from the trees that were once in my yard. Can't wait to pour the concrete...

I a change my username for the same reason a car manufacturer changes body styles each year, it gets old looking at the same thing. I am not trying to hide anything. If I wanted to post or send email anonymously I could do so very easily by sending the post or email through a re-mailer. I am not hiding anything, it seams to me though that you are the one hiding behind a screen name, probably a trial disk from AOL, a little registry tweaking and you can use AOL as an internet provider forever. Keep in mind, I am not hiding anything, if I were I would not be on this NG, it is full of snitches or at least one.

10 out of 10 rational thinking people agree. N8WWM is full of beans.
Possibly "Magic Beans" that somehow fit right into his fairy tale
imagination of federal regulations. Tell me N8WWM, now that your favorite
liberal "Al Gore" has passed regulation on 1.6 Gallons to flush a toilet,
how many gallons does your tank on your toilet hold?

A true "Goron" would put bricks in it to make sure he's complied with
federal regulation. But, I got a better idea... Take your warm fuzzy
argument and flush it... Unlike the tank on your toilet, your argument
doesn't hold water.

> -Barry

There are any number of good stories, some of them true and some of them urban legends. I know of one guy who observed the Amateur power limit (1kw input at that time) by limiting the heater and filament power to a kw. He happened to be the District Engineer for the FCC and a fine gentleman at that. He also lived well into the country and knew the power company well.

One of my favorite extreme stories is the guy who attached helium balloons to a lawn chair and went for a ride. Did not violate a single reg.

Sure these things are done. But anyone who has ever worked on the gear realizes that the scale of things changes rapidly with output power. A simple-minded 5kw out FM transmitter uses three-phase and a 4CX5000 with one hell of a lot of cooling hardware. Now these things are designed to survive for days running into a dead short and would run 10-12 kw input AM linear and probably deliver 10kw pep ssb without a lot of sweat if one did not mind buying tubes periodically. But the thought of 10kw SSB out on single-phase current in a neighborhood setting, dedicated 7100 volt transformer and all is simply ludicrous let alone 25kw. If this particular war story goes back to the AM days, that sort of power would not only wreck havoc with most

receiving gear for quite a ways it would be audible on hearing aids, tooth braces, aluminum siding, and even toilet bowls; check QST of the 50s vintage and they ran little items all over about goofy AM reception. If it was hidden in the inevitable small room in the basement I hope the cooling fan said Cummins on it.

All sorts of things are tried and some of them even work -- for a few minutes. Most of these stories are urban legends.

Dick

dick the guy i am telling you is surely not a urban legend. there are plenty of guys running large power that some say cant happen. the one with the 8 alternators and the 454 with nitrous is true. his name is weed in florida and his van has two seperate motors with the 2nd being soley for current generating purposes. also the guy that runs the 200 amp service straight to the transformer is also true. put it like this, he uses 6 4cx250b's for his driver and is VERY well known. take a listen to 27.025 at any given time. alot of these guys run 3cx15000a7's in the house. i hear Black Ambassador out on the west coast all the time using his collins gear with a pair of 3cx3000a7's into a 8 element yagi and there are guys right there in cali that can knock him out of the box at any given time. it is true the biggest and highest power cb setups are mobile but there are tons of big guns on the bases too. my local neighbor here runs a 3cx5000 on his base into a old moonraker 6 and its all done very clean. he's only a couple miles away and i have no probelm talking on other channels while he is going full power.

well it was N8wwm (doug) who started this mess with the flooded posts, the
pornographic posts, and all the other garbage. The only confrontaion I have
ever had
was in a civil mature way. WHat did I get for it? Doug slamming me and the
public
service organizations I work with.

> >

Look at the behavior of some of the Hams here, I could just as easily make
the
assumtion that all Hams are a$$holes because of people like Doug. But I know
better, there are many Hams who are really cool, and enjoy helping others to
enjoy the radio hobby.

Nobody is blaming anoyone except the gulty parties, if they abuse the
network
they deserve whatever they get.

> > We observe a simple process of courtesy, as a right to express our own

I agree with you 100% here, everyone should abide by the rules, and guess
what.
In the US, the FCC has the ultimate jurisdiction over the internet, as the
internet
falls under the Telco's domain.

> and law abiding people. I don't think so

Nobody is trying to supress doug because of what he has to say, it's How he
is saying it!
Everyone who has seen me post here knows I do not believe in running power,
or freebanding. Has anyone here ever seen me call people homosexuals, or see
n
me flood the group with 400+ messages in one day? No, ever hear the
expression
you catch more flies with honey? The whole point I have with this is simple.
Doug wants

everyone to obey the rules, fine, then he should be the first one to set the proper example.
Instead we have the old "Do as I say not as I do" routine going on. Think of it this way.
In Ohio a police officer when running his radar by law has to be parked in a visible location
with his running lights on. If he is parked in a non visible location the ticket is invalid, you
can't break the law to enforce it. Two wrongs do not make a right.

I realize this will probably get me flamed by some here but I have my turnout gear on
so I should be well protected.

Simply talking about radio mods, sending someone wiring scematics ect. is not illegal.
remember the constitution, and the bill of rights that so many americans have shed
blood to defend. It's called the freedom of speech. In some parts of the country oral
sex is a crime, But at the same time the people living in these areas can talk about it
on the phone, internet, or in a grocery store, and not get arrested because it is just speech.

Again I am not defending the people who do illegal things. Doug does have a right to
express his feelings on people running illegal amps and export radios. What he doesn't
have is the right to flood the group with his repated posts.

> Exactly, but they are losing the right to post altogther, you can filter
> the posts you dont want to read big difference in my opinion.

No they still have the right to post, it takes less than five minutes to get
a news provider.
and these next provider will have a AUP/TOS as well, and as long as they do
not abuse
their priviledge, they will not have any problems. Filtering isn't the
problem, what you fail
to realize is that the bandwidth that is wsted by these flooded posts costs
money. Have
you ever priced what a T1 line costs? It takes a minimum of a T1 to provide
good news service.
The ISP and news provider admins keep an eye on their bandwidth usage, they
have a nice
little meter that shows usage, what groups it goes to ect. One of the
server/network administrators
on the Undernet IRC (chat) networks posts daily the groups on his servers
that gets the most traffic.
When the traffic spikes they take notice. They may not always notice it
right away. It might take
them a few days to review the logs. But they do review them.

> Why didnt they care about the illegal information that passes thru the
NG,
> why not turn those that discuss it in to there isp's. because the could
care

> less about the Integrity of the NG. Go sell your story to someone who doesnt
> know any better. I have been there and done that, and i know what its about.

Again, have you ever seen me flood the group with nonsense? I have no story to sell.
I did not partake in the doug/twistedhead war, I respect both of them as individuals,
that they each are entitled to their opinion. And yes I was one of those that sent an
email to dougs ISP regarding his abuse. I sent that email long before Twisted
responded in kind. I follow both the rules set by the FCC for radio usage, and
by the rules set forth by my ISP.

What I am saying is that Doug is no better than anyone else, as he is breaking rules
to get his point across. Many here have seen me speak out against using amps and
export radios. Do these people that run amps and moded radios flame me? No.
Why? Because I am respectful, I do not call anyone vile names. I have had meaningful
discource with several individuals from this group by email, from both sides of the battle,
both bfore the war started and afterwords. Some of us disagree, like QRM and myself
disagreeing about REACT, heheh that discussion took place not only here but on a few
mailing lists we are both on. Do I despise him for this? No, I respect him for the person he
is, and his opinions. I am not narrowminded that I can't be proven wrong, heck if I am
wrong I WANT to be told, but in a civil manner. Mistakes are a wonderful learning experiance.
Believe me I have made enough mistakes hehe. And I hope that people respect me for my
beliefs, but if they do not, I am not going to browbeat them.

Thats all I have to say on this subject.

Thanks Tony - I author Tom's site.

True, he doesn't usually use a scope unless he's tracking down an audio problem. I will say this though... Back in the early 90's I started with a Radio Shack TRC-216 Walkie Talkie. I blew out the finals on it, and took it to Doc/Tom to fix. Brought it over, had some coffee, and when he was done people swore up and down that it was a base station radio. (I had it hooked to a base station antenna.) After he did up my 2510 it was all over. Just about everyone in the area took their 2510's to Tom. At that time it was the only model of this type out from Uniden, the HR2600 and Lincoln weren't even made yet.

He used to service radios for the Buffalo Police. Got his degree at Bryant and Stratton, worked at light lab for a while making those signs like you see in vegas and at carnivals. Definitely knows his stuff about electrons and components.

So far the worst basket case radio he got through the web was from Tennessee. It looked like someone did a chipswitch with a hunting knife. That poor circuit board had so many cut traces and missing surface mount components that it took him all day to troubleshoot and replace the missing traces and components. BUT!!! It did/DOES work now... I thought for sure he'd have to scrap it and charge the guy for a new one, but.... I guess it's more the challenge for him than it is the bill.

Just a couple days ago I went over to his house and he had another unit in. The main board did some weird stuff where at 24Mhz it was at 24.8Mhz and at 27Mhz it was at 29Mhz. He suspects that there is a problem with one of the PLL's on the computer board. He sat there and tracked it down with the scope and we couldn't find anything wrong. I don't know what the status is, but he said it's not a big deal because he's got spares and he knows he can track it down. He'll probably ship it out with a new board, and repair the other one in his spare time just to make the customer happy.

Another interesting radio was one that was in a flood. I don't recall what happened with that one, but I do know the customer was happy.

He also loves his old Fords... I helped him build the engine that's currently in his Mercury Marquis. The previous one was 12:1 compression and the fuel injection computer didn't know how to handle the increase in compression. So we built another one with roller cam's and aside from that factory. It's got 200 miles on it, and you can't even tell it's running. VERY quiet, but man... Step on that pedal and WHOOOOSH!! You're outta there... Can't wait to dig into the other block he has... Just need a car that is grandfathered from emissions testing. An old Lincoln or pickup would be nice.... Very hard to find up here in Buffalo. So much salt is dropped on the roads in the winter that you'd swear the Lake should be salt water by now.

Also worthy of note is that Tom finally has DSL, but it's going to be a few months before we start to use it to it's full potential. Plans are webcam for the work area, an on-line chat room. But we need a machine for use at his desk. I'm sure I'll find one, but I'm preferential to HP equipment. I found his wife an HP Pavillion for $300, installed it this

past Dec 7th, and it hasn't crashed yet. (Thankyou Windows 2000!!!) Her old machine was VERY problematic... So, one might say that I'm with computers like Doc is with Radios. I think I have a few machines in the basement that still use the OLD formats for data storage. Punch card, paper tape, and an old Ampex that stores data on Stone Tablet. 32K core memory!! (Uses magnets for RAM!) Oh yeah, if anyone needs any old Basic/Four 5MB removable media I've got a few of them. That machine used to heat my house back in the late 80's. It was a sad day when I scrapped it and the 2 Dec Vax 11/785's with the TU/78 and TU/77 tape drives.

For anyone who doesn't know about Doc, here's his site.
http://kjv.homeip.net/~hr2510/

Here's MY site:
http://kjv.homeip.net/~kjv
(SGI Indy is down, so webcams are offline. Putting Linux on it... Irix 5.3 was hard to port to.)

Heh, one guy melted down an antron99, he had a 3 phase amp system the final phase ran on 220 he was using a set of beams until his rotor burnt up, instead of buying a new rotor he put up an antron, the antron wasn't capable if th3e power he was putting through it and he turned the antenna into a pile of goo. I haven't heard him out there in a while, probably due to the fact he had to go to jail for non-payment of child support, seems he could afford to pay out all kinds of money to buy amps and radios but not enough to pay for his 3 kids.

Ok... This guy is a liberal... How to tell? Very simply...

1.) Accustion of the previous poster being a Hypocrite, and judgmental using Stereotypes.
-- Enter in the liberal "double standard"

2.) The sentence IMMEDIATELY thereafter he uses a stereotype (group of people) "Christians" and basically does the same thing he accused the previous poster of. And! He also has a "solid opinion" of that stereotypical group.

Pot calling kettle black.

Ahhhh Liberals... Interesting breed of human. Monkey see, monkey do... Not a free thinker in the bunch. But if they don't get their free govt issue bananas they rant and scream uncontrolably.

Now before someone accuses me of being a religious twit with KJV (King James Version) for initials (actually Karl J. Vesterling - my name) all I have to say is this.

10 Commandments. Good words to live by. No problems, I agree wholeheartedly...

Tithe 10% - Ok... I'll help my neighbors and friends no problem, but not a dime goes to any religious church or foundation. I don't think that "god" meant US legal tender when this was put forth as a practice. Reference barn raisings, etc... And since the liberals made it the governments job to dole out charity in the form of welfare and unemployment insurance I can't see any reason to give the church any money since I'm already giving that to the government.

***NOTE: The term Liberal is not used to put fellow man into a group, but rather to express a common mindset or "thinking process" shared by certain individuals.

Yes - I am a registered republican.

I did this with my Yaesu FT-890. I opened it up, it will transmit from 1.5MHz to 29.9999MHz. I modified it so that I could feed my 6-meter transverter. It needs 26.0-29.9999 to make the entire 6-meter band 50-53.999MHz. I also use it into a 2-meter transverter (144-147.999). Is it legal? Certainly it is. I can modify any transmitter, yes ANY transmitter to use it on the ham bands. It is quite illegal for me to use my FT-890 to transmit anywhere a type accepted transmitter is required (such as CB). But since I don't need to use a type accepted transmitter on the ham bands my modified, non-type accepted FT-890 is perfectly legal to use as long as I use it only on the ham bands. Just as it is legal to use the now defunked KBUC transmitter on 160 meters. It was quite a simple modification. Replace the crystal oscillator with a VFO input. Modify a couple of coils and change out some tuning capacitors. I now have a rig that will put out 5KW on AM. It's illegal for me to transmit with that much power so I use the max power I am allowed. If I want to take the KABB-TV, 5MW transmitter and modify it for the ham bands it is perfectly legal for me to do so. BUT I may not use it with more power than I am allowed, which is usually 1.5kw.

your a fool if you think yaesu, kenwood, and icom does not openly know and support the fact that freebanders around the world buy there rigs. the manufacturers themselfs would fight tis tooth and nail and it could never suceed. besides how many times have we seen the government so called "pull the plug" on something only to make the problem worse. if they ban the mass import of these radios it will be no big deal because they will smuggle them in like they did tea in the 1700's, rum in the 1800's, and cocaine in the 1900's. the government is not a be all end all organization and never will be unless your a commie red.

"What these select few get bent out of shape over is the fact they can do absolutely nothing about the export radios, so they do the next best thing that feeds their egos and that is attack those whose viewpoints may differ from their own. The select few that attack and post malicious trash have not learned the basic rules of supply and demand, especially where radios/electronics are concerned. I would surmise a point was to be made if the ones who cried the loudest complained about intruders into ham bands, but they don't. They don't even care about that because they don't spend their time with other hammies because the hammies don't accept them, so they end up here bitching about cbers they have no control over. In other words, they are easily intimidated by other hammies, and feel truly threatened by freebanders."

75kva pole pig transformer @ 7200 ac volts, lets see what it can do.
Primary AC volts = 220
Secondary AC volts= 7200 - 2%
7200 - 144 = 7056 volts
7056 volts x 1.44 = 10,160.64 DC plate volts
3xc15000a7 draws 6 amps on the plate max
6 amps draw on approximately 10,000 volts on the plate =
200 amp service X 10,000 volts on the plate = 60,000 watts
60,000 watts devided by 220 volts = 272 amp service? No way..
how about 50,000 watt / by 220V = 227 amps getting closer
40,000 watts devided by 220 = 181.81 amps?
Lets not forget about drivers and power factor.
realistic 35,000 watts devided by 220V = 159 amp draw.
220 x 0.95% power factor = 209
35,000 watts devided by 209.2 = 167 amps draw
200 amps service - 167 amps = 33 amps left for drivers, 3CX3000A7?
I dont know it all hypothetical.

KRS

The base here at the office is rather old, and rather than put money into it I'm thinking of buying a new one, What we have is an old R/S Navaho, I am looking at a Uniden President Washington, I have one at home, but they have changed the boards, is the quality of the newer ones as good as the old ones? If anyonje has any suggestions I am open for ideas, provided that no one suggests "export" radios. Not only do I not believe in illegal equipment, but being involved in disaster communications along with the State EMA and FEMA ect. the last thing I need is for them to come into our EOC and see an illegal radio sitting there.

krs, you know as well as i do you can get more than one 200 amp service into your house and you also know what some of these guys are running. not sure what you got but i heard you in there the other day with some very high qauility sounding audio until wesley keyed down and took you out.

For a Legal radio I suggest a Uniden Grant XL or LT, also you might look at a Cobra 148 GTL, both are great mobile radios I have owned both brands, and still have them sitting on the shelf. If you don't need SSB, you can go with a Cobra 29 Classic, I'd suggest staying away from the ST models, although the ones with the weather band are handy.

If you just want to listen to the other Freq's get a good SW reciever.

Hope this helps

Only if you are running standard household current, single phase.

220 at 200a (or 240, depending on your local municipality / where
your tap is on the pole pig) is the norm.

However, in my old house, I requested, and got a 300A drop. Told them
I had a largish welder, and I needed the extra current to keep the wife
happy
during summer, while I would weld, she would be in the house keeping cool.

But I prefer beating it to death
> with
> > >>facts instead of dictionaries.

Me too. Learn some more.

> > -Barry

Yes, thats Bobby.

Then their is the boy in Florida running 6 power supplies in the back of a
van with a big
block turning just those alternators, while the stock engine is under the
hood, pulling
the 4 wheeled base station down the road. Pictures of EVERYTHING I talk
about are

available on request, or on my website, www.bigradios.com.

>
> There are any number of good stories, some of them true and some of them
> urban legends. I know of one guy who observed the Amateur power limit
(1kw
> input at that time) by limiting the heater and filament power to a kw.

And what did that do?

The amateur power limit in the early days (1kW input) was TOTAL station
input.

And as you like to say, I prefer to beat things up with facts.

As the fils voltage is lowered, the amount of electrons available from the
fil to the
plate is lowered, resulting in lower peak emmission. Guess the comment you
made above is impossible,
since lowering filament voltage results in less power output, huh?

Or, in indirectly heated cathodes, the cathode isn't heated enough to give
proper emission
and you end up stuck in the same boat as the directly heated cathode (3- and
4- style tubes, as well
as some ceramic).

Either way, limiting your filament voltage does nothing, since lowering the
fils voltage only reduces
peak emission capability.

And, your comment was "by limiting the heater and filament power".

The filament is the heater.

In some tubes, the filament also doubles as the cathode. Maybe that is what
you meant?

Regardless, what you said was hogwash.

He
> happened to be the District Engineer for the FCC and a fine gentleman at
> that. He also lived well into the country and knew the power company
well.

So did the person you are purporting to be an urban legend. Read the story
again,
until you get all the facts.

> Sure these things are done. But anyone who has ever worked on the gear
> realizes that the scale of things changes rapidly with output power. A
> simple-minded 5kw out FM transmitter uses three-phase and a 4CX5000 with
one
> hell of a lot of cooling hardware.

I suggest you look at a single phase Collins U series unit.

208U-10 -- 10 Kw pep single phase transmitter. Pair of 4CX350s driving a single 4CX10K.
Uses single phase 220 power input. It is considered the standard by which all other transmitters
are compared against in the 10Kw PEP output class. They also make a 3 phase wye and delta,
depending on what you ask for.

The other U series transmitters / amplifiers are the same. So, it is quite easy to get 10Kw out of a
220 socket.

Now these things are designed to survive
> for days running into a dead short

No they aren't. If they find a vswr mismatch, or reflected power over a preset amount, they
autoshutdown. If yours don't, I suggest you find someone who can build you a real linear.

and would run 10-12 kw input AM linear
> and probably deliver 10kw pep ssb without a lot of sweat if one did not mind
> buying tubes periodically.

Huh?

With the lower duty cycle of SSB, you could run a 10Kw input amp at 10Kw output
PEP SSB with almost no problem, as long as you kept the compression and other
audio processing down.

That is, if it was designed properly in the first place.

But the thought of 10kw SSB out on single-phase
> current in a neighborhood setting, dedicated 7100 volt transformer and all
> is simply ludicrous let alone 25kw.

No, it isn't.

I get 15 thousand watts PEP out of my 4CX5000R tube.

I use a pole pig, class AB (Yeah, I draw grid current, so add teh appropriate number).

With 6500 volts on the plate, app 1200 on the screen I get 20dB power multiplication.

And I don't have a problem with line sag. I suggest you move if it is a problem with
your area, and if you don't want to move, insist that the utility fix your problem.

If this particular war story goes back
> to the AM days, that sort of power would not only wreck havoc with most
> receiving gear for quite a ways it would be audible on hearing aids, tooth
> braces, aluminum siding, and even toilet bowls; check QST of the 50s
vintage
> and they ran little items all over about goofy AM reception. If it was
> hidden in the inevitable small room in the basement I hope the cooling fan
> said Cummins on it.
>
> All sorts of things are tried and some of them even work -- for a few
> minutes. Most of these stories are urban legends.

And a lot of the people who say they are urban legends just don't want to
believe.

I have personally built, operated, configured and installed up to a 70
thousand watt
amplifier, for 11 meters, on a base station.

Mobile, well, thats a different story. Only a dual 3CX3000A7 is what I have
built.

However, I have operated, installed, and helped the end user work a dual
4CX10K box
being driven with 5 8877s.

Thats 20 thousand watts of drive, into 2 tubes. We would hold about 60
thousand watts, as measured
on a dual line section from Bird, using 1 and 5/8 inch hardline (I think.
Memory is a little fuzzy their).

And yes, it was the same system referenced as bobbies in the beginning of
the message.

I don't agree with posting the same message 8 times, But Twistie, and a select bunch who have confronted doug & co do the exact same thing that they are blaming dougs group for false,

"You are a lying troll and everyone knows it. Join the other two in being ignored. I would watch the topic if I were you. You're dangerously close to violating your ISP's TOS. Don't bother replying, you are now relegated to "block" status in my inbox delivery along with the other trolls."

After reading post by one gentleman here regarding the wiring for a
mic, reminded me I have a cubic butt ton (polite way of telling someone
"a whole sh*tload) of radios in my repair shop that all they need are
mics, I also have a good many mics, so I decided to start wiring the
mics to these radios and then perhaps sell them locally. Anyway I went
to this guys website and I was shocked when I read his site talking
about his radio and how easy it was to modify it to go WAY out of band,
there is NO excuse for these radio manufacturers to let this go by. At
the same time I think the FCC should take a closer look at these radios
that are type accepted for 11 meters,if they had looked more closely
they wouldn;t have let them be used for 11 meters if they were that easy
to modify.

Of course there are the times where they have pulled the plug and made the problems go away too.

> if they ban the mass import
> of these radios it will be no big deal because they will smuggle them in like

Just wishful thinking on your part Tim. As you well know there is nowhere near the market for banded hardware as there is for Tea or illegal drugs. Back when you were still wearing diapers, early 80's, a local company was selling an over the air service called "On-TV", which used a local UHF TV station (channel 20) to broadcast uncut movies commercial free. Many people either built their own decoder to get the transmissions or got them at local TV shops. After On-TV complained to local LEO's and the FCC the sources of decoders dried up in the Detroit area. That left the only place to get them was across the river in Canada. A few more phones calls by On-TV to US customs just about put an end to that source too. The fines and so on were not worth the trouble for the various sources to keep selling the decoders so they quit.

> government is not a be all end all organization and never will be unless your a
> commie red.

The FCC gives, and the FCC can take away privileges at any time they so choose. Don't forget where the 11m band came from in the first place Tim. If the Hams can lose it so can the CBers. All it takes is some ink a piece of paper to do the job.

Radio is about communication. So all the noise makers, sound effects really makes me wonder if the operator using them is serious about communications at all. For the most part all that crap seems to do is make the operator that much more difficult to understand on the air.

Please feel free to forward any and all posts
to the FCC, it's your privilege to do so. Just
like I can forward all post that you make that
are not up to your ISP's rules. You, as a private
citizen can not tell my ISP what is illegal to discuss,
on the other hand when you post Vile, Vulgar,
Harassing, Libelous posts, well my friend that is
against almost all ISP's rules. So considering they
are a private company, well just like when you
break a clubs rules, it is up to them if they want
to keep you.

>do absolutely nothing about the export radios,

It seems of late that the ARRL has the ear of the new head of the FCC, and the talk is about clamping down on the so-called "export radio" and the intrusions in to the 12m and 10m Ham bands.

> so they do the next best
> thing that feeds their egos and that is attack those whose viewpoints
> may differ from their own.

Sounds just like you Twisted.

> have not learned the basic rules of supply and demand,

I think many CBers are going to get a rude education in that department.

>especially where radios/electronics are concerned.

Well just look at scanners now days. It is getting really hard to find a scanner that can pick up cell phone calls because the new designs can't even be modified to do it any more. As a second example Radio Shack's cheap 10m mobile can't be modified like the older one to go out of band. What I find really humorous here Twisted is you talking about electronics, where you have admitted you're lucky if you know how to solder a plug on to the end of a mic cable.

> I would surmise a point was to be made if the ones who cried the loudest
> complained about

What you really mean by "surmise" is it is just "a wild a** guess with nothing to support it" point. Of course I wouldn't have expected you to say anything different. It would be out of character with your past postings because everybody knows you're never wrong, right? 8->>

Of course you don't see all of the dead, or nearly dead 706's, where the mods were messed up by some clown who doesn't have a clue. Icom gets a lot of rigs back because of that, but of course your good buddies aren't going to admit they screwed up the mods now are they?

Didn't I tell you to crawl back in your hole? You don't ignore
anything because you are to paranoid. Just go back to lurking, and do
it quietly because nobody here gives a shit about anything you have to
say anymore.

Hi WebDoc,

Sure, there's a really nice rig that just came out from Galaxy. I'll include the link below. I found out about it at Panther Electronics, a very reputable shop. They even have it as a discussion topic in their forum. Good luck and take care. 73. (http://forum.panther-electronics.com/)

The new 2950 DX uses surface mount technology on the main board, improved
front-
end overload rejection circuitry and is 10,11 and 12meter compatible.
I would rather push my Ranger up a hill than drive a Galaxy down the other
side......

The FCC has oversight of the telephone companies, the phone companies
own the ISP's in the US it all flows downhill.

We'll forward all your buddies posts. Whenever a piece of illegal cb gear
is put up for sale or illegal cb activity is discussed we well notify the
ISP. Harassment? Maybe. Legal? Undoubtedly. Within our rights? Unequivocally.

>like I can forward all post that you make that
>are not up to your ISP's rules. You, as a private
>citizen can not tell my ISP what is illegal to discuss,

Where do you get that twisted logic from? If you (or your buddies) are selling
illegal CB equipment in violation of FCC laws we have as much right as any
to tell the ISP about it and STRONGLY suggest the account be terminated.

>on the other hand when you post Vile, Vulgar,
>Harassing, Libelous posts, well my friend that is

Source record: 82251

Appparently ROUGH TOUGH OUTLAW CBERS get shocked and traumatized when they see the word "fag" or "asshole" in print. Oh my!

Frankly, we're not buying this. Landshark and Twisted and the whole outlaw/keyclown gang are perfectly capable of making vile threats and posting profanity whenever they feel like it. All it takes is a cruise thru the archives to prove this is true.

We already have proven Twisty to be a dog-beating, student-shooting, fantasy-journalist hypocrite nutbag who thinks illegal freebanding is his personal crusade.

Now it's time to add another cased to our file. Mr. Landshark, recently head of the "Profanity Patrol". Mr. Twistedhed has signaled his approval of the Shark's actions, or really, ANY actions that might silence critics of illegal CB.

Newsflash: In weeks to come, Mr. Shark will not be able to raise his snout above water without the harpoon of logic and lucidity being flung at him. "That he blows!" (Oh Christ, he's performing fellato on Twisty!)

You idiots only split hairs when you argue this truth. It is ILLEGAL to mod 10 meter rigs for CB, or any othe band <unless it is a ham band, and that mod is ONLY legal if used on a recognized amateur band. Even then, the spectral purity of the modified equipment must be within minimum FCC limits.> PERIOD. You act like you don't get it when we all know you do. You gripe and whine when you know I am right.

1. Transceivers are "type accepted"...I know they have a new phrase now, but I forget what it is...same meaning.

2. Type accepted transceivers are capable (out of the box) ONLY of being used in the spectrum that they are type accepted for.

3. Modifying a transceiver type accepted for one radio service, to a state of capability in another, non type accepted service, is ILLEGAL.

4. The HR 2510 is type accepted ONLY as a 10 meter transceiver. Ergo, mods to this radio that make it capable on 11 meters or any other frequencies,EXCEPT AMATEUR BANDS, and IF IT MEETS SPECTRAL PURITY RULES, are ILLEGAL. MODS TO THIS RIG, OR ANY 10 METER RADIO THAT MAKE IT WORK ON CB OR ON THE SO CALLED 'FREEBAND", ARE ILLEGAL!

Any questions? <TV commercial of the frying egg as "your brain on drugs" comes to mind here>

heheh you reminded me of my trip to milwaukee 3 years ago for the Harley Davidson 95th anniv. bash. Me and a friend of mine who is a truck driver walked by the sharp looking pete. that they use to pull the Easyrider trailer, they had the covergirl of Tattoo magazine posing on the hood of the truck, Jim whistles and says "Damn if thats not the purtiest lot lizzard I have ever seen". The girl sitting on the truck had no idea what we were laughing about, she had never heard the term lot lizzard before. Finally after he was able to gain his composure and wwipe the tears of laughter from his eyes the photographer explained to her what a lot lizzard was, by that time we were out of earshot. Later that day we walked past her as she was sighing pictures at the Tattoo magazine booth, she saw us amd yelled out "Lot lizzard huh? Bastards". Hehe Jim and I still laugh about that at the local Biker bar.

Thats about what i figured, it's a sad thing, while reading through the group earlier I saw a post regarding mic wiring, which reminded me I need to wire up a bunch of mics for the 25 mobile cb's I have in my workroom. Some of these radios/mics are units I have never heard of before. Anyway this one gentleman posted his web site where he has mic wiring guide for many radios, so I thought I'd check it out. While on his site I saw his rig, I was shocked at how simple it was to mod that radio to reach into the 10 meter band.

I had used a Cobra 148 GTL for years (shaking my head), the only thing ever done on my radio, and to be honest this might not have been legal, but I had the power reduced, I was only keying 2 watts on AM. That was all I needed, plus my neighbor who was a good friend of mine was also a CB enthusiast, and sometimes we would bleed eachother, so I had mine turned down to 2 watts, heck all I needed at that time was to be able to talk to the other side of town. Now I use a older Cobra 29 classic in my car, which is broken down at the moment, blew a head gasket, and a old Uniden president Washington for my base, which is also down due to the storms we had a few weeks ago, the wind took my tower and twisted it around like a pretzel. So for the time being I am only on the air from the office, which is cool because now the coffee pot, fridge, and restroom is right beside my radio heheh.

Maybe, but I AM going to ask a couple of questions. One - what voltage was he feeding to the amp? Two, What current was supplied to the amp? (this means, what was the efficiency of the amp - on other words, for the brain dead, was this input or output?) Three - what gauge wire did he use to supply the amp?

I am not saying this is impossible, I am asking serious questions. Please bear in mind that I have run 20 Kva at 120 volts and am familiar with wire gauges. I am also familiar with ohm's law. I have also repaired various HF, VHF, and UHF radios. Also, I will gently mention that the wires for the 20 Kva supplied at 120 volts were bent with hickeys.

For what it is worth, the shop I worked at had some UHF radios that were modified from 460 MHz to the 440 MHz amateur band. The earoms had to be reprogrammed. The radios were type accepted for business band UHF. It worked fine for the amateur 440 band. It could also be reprogrammed for the business band since the equipment was type accepted for the business band. It did not have to be type accepted for the amateur band. In any case, the gear met all requirements for either band (you didn't think the thing wasn't checked out, do you?). No, it was not modified (except for the earom reprogramming).

I have to agree with the majority of those you listed... I was out of the group for a while, so a couple of those may have come and gone in that time, as they don't even ring a bell, though most do... I don't remember Sir Mixalot, The CB Guy, or Radio Walt for instance. I am assuming that the majority of them are gone... I have not seen posts from a number of them in quite some time... Chuck for instance.. His business went under (like 2-years ago now I think., Damn time flies!) Ever since then, I haven't seen any posts from the guy... I remember people always harassing him about living in his moms basement... lol Those were the days!

In any case, I know what you mean about the filters... Have many things blocked, and just don't see the crap anymore. The group is ALMOST like old times, except that back in the day, there were probably close to 500 to 600 new posts a day. And the majority (90% if not more) were actually informational, and not all the crap that is here today...

Go figure.. I don't remember you either... Were you mostly a "watcher" back then? I was for the most part. Just starting to get an education about radio at the time. I've come a long way with the subject thanks to the helpful posts of many in this group.

Later...

Hello & Good Evening,
It is the only American Made Sportbike
available on the market. Erik Buell was
a engineer & racer for Harley, and had a
vision to make this. He went on his own
in 1980 or 81 and produced a very
aerodynamic bike. It now hold the land
speed record for a stock bike (taking it
away from BMW)

Nice job of dodging the questions .... ok, not really. But in case you
forgot or deleted the post, here are the questions again:

1) Why should you, and admitted RF pirate, be concerned if somebody
breaks the rules of their ISP?

2) Why should anyone follow your lead and obey ISP rules but ignore
FCC rules?

3) Why do you complain about others breaking the rules of their ISP,
but you feel others should not complain about you breaking the rules
of the FCC?

If these questions are too difficult for you to answer, then please
explain why you won't answer them.

terminated.

Huuum, lets see, "Dear Mr. ISP I wish to inform
you that Landshark is selling illegal equipment, per
FCC rules." Response: Please forward all headers
with such items and will investigate. " Well I don't
have any headers to forward, but he has talked
about how to run those illegal Items. Oh, and he has
admitted that he has, and will do those things in the
future" Response: Well he can discuss those things all
he wants, as long as, he doesn't post said " items" for
sale.

> You are a tattletale hypocritical fagboy who wants to dictate the

Very easily done, go to the link, put in those addresses, get the info, inform the people involved what this person is doing.

Last-modified: 20010410
URL: http://ddi.digital.net/~gandalf/spamfaq.html

Greetings and Salutations:

This FAQ will help in deciphering which machine a fake e-Mail or post
came from, and who (generally or specifically) you should contact.

The three sections to this twelve portion FAQ (With apologies to
Douglas Adams :-)) :
```

o Introduction
o Tracing an e-mail message
o MAILING LIST messages
o Reporting Spam and tracing a posted message
o WWW IP Lookup URL's
o Converting that IP to a name
o What to do with "strange" looking Web links
o Getting a World Wide Web page busted
o A list of Usenet complaint addresses
o Hoaxes, Fraud on the Internet and The MMF (Make Money
Fast) Posts
o Trying to catch the suspect still logged on
o Filtering E-Mail BlackMail, procmail or News with Gnus
o Rejecting E-Mail from domains that continue to Spam
o Misc. (Because I can't spell miscellaneous :-)) stuff
I couldn't think to put anywhere else.
o Origins of Spam
o How *did* I get this unsolicited e-mail anyway?
o How To Respond to Spam
o Firewalls and protecting your computer
o Revenge - What to do & not to do (mostly not)
o Telephoning someone
o Snail Mailing someone
o 1-900, 1-800, 888, 877 and 1-### may be expensive long distance
phone calls
o Junk Mail - The Law
o Additional Resources - Lots Of Links and a *really* good book

Introduction
==========
Please feel free to repost this, e-mail it, put this FAQ on CD's or
any other media you can think of.

The latest & greatest version of the Spam FAQ is found at:
http://ddi.digital.net/~gandalf/spamfaq.html

PLEASE email follow-ups, additions / changes to gandalf@digital.net

My news source is OK, but I sometimes miss items.

I accept all and any input. I consider myself to be the manager of
this FAQ for the good of everyone, not the absolute & controlling
Owner Of The FAQ. I do not always write in a completely coherent
manner. What makes sense to me may not make sense to others. If the
community wants something added or deleted, I will do so. I removed
any e-mail and last name references to someone making a suggestion /
addition. This is so that someone doesn't get upset at this FAQ and
do something stupid. If you don't mind having your e-mail in this FAQ
(or where it is required), please tell me and I will add it back in.

First off if you received a spam (Unsolicited Commercial E-Mail) there
is no "easy" way to get the spam stopped. Generally if you reply
(unsubscribe) all this does is confirm that your e-mail address is

"live" and just gets your e-mail address sold to other spammers. Spam has to be delt with one at a time. Sorry, it isn't easy to stop the spam. The "Internet" (the collective non-profit and profit entities of the network) is trying to fix this problem but it is taking time.

Before trying to determine where the post or e-mail originated from, you should realize that (just like the The National Enquirer http://www.nationalenquirer.com/ or a logical argument from Canter and Siegel) the message will have *some* amount of truth, but all or most of the information may be forged. Be careful before accusing someone.

Commands used in this FAQ are UNIX & VMS commands. Sorry if they don't work for you, you might wish to try looking around at your commands to find an equivalent command (or I might be able to help out some). There are programs for the Macintosh and Windows machines that do the same thing the UNIX commands do, see the above URL's for where to locate this software.

And no, I am not going to tell you how to post a fake message or fake e-mail. It only took me about 2 days (a few hours a day) to figure it out. It ain't difficult. RTFM (or more appropriately, Read The @&%^@# RFC).

Every e-mail or post will have a point at which it was injected into the information stream. E-mail will have a real computer from which it was passed along. Likewise a post will have a news server that started passing the post. You need to get cooperation of the postmaster at the sites the message passed thru. Then you can get information from the logs telling you what sites the message actually passed thru, and where the message "looked" like it passed thru (but actually didn't). Of course you do have to have the cooperation of all the postmasters in a string of sites...

Tracing an e-mail message
==========

To trace the e-mail you have to look at the header. Most mail readers do not show the header because it contains information that is for computer to computer routing. The information you usually see from the header is the subject, date and the "From" / "Return" address. About the only thing in an e-mail header that can't be faked is the "Received" portion referencing your computer (the last received).

You will need to take a look at the headers on the message as follows (Thanks to Michael, Piers and others) :
Claris E-Mailer - under Mail select Show Long Headers.
Eudora (before ver. 3) - Select Tools , Options... , then Fonts & Display then Show all headers
Eudora (ver. 3.x, 4.x IBM or Macintosh) - Press the BLAH button on the incoming mail message
For Mac Eudora 4.x, hitting the following will cause Eudora to alter its default setting so that BLAH will be automatically selected for

all new email received after this switch is set:
<x-eudora-setting:123=y> When checked, Eudora will show all the
headers from messages, not just an abbreviated set.
HotMail - To expose the full message header, click "Options" on the
Hotmail Navigation Bar on the left side of the page. On the Options
page, click "Preferences." Scroll down to "Message Headers" and select
"Full."
For Lotus Notes 4.6.x - From the menu bar, select Actions, then
Delivery Information. Copy the information from the bottom box into
your e-mail report at the top of the spam.
For Lotus Notes R5 - From the menu bar, select Actions, then Tools,
then Delivery Information. Copy the information from the bottom box
into your e-mail report at the top of the spam.
MS Outlook - Double click on the email in your inbox. This will bring
the message into a window. Click on View - Options. You can also open
a message then choose File....Properties....Details.
MS Outlook Express - Alt-Enter, or Alt-F then R.
MS Outlook Express - More Detailed:
To look for, copy and send headers In Outlook Express
1- Press CTRL F3
2- Press CTRL A
3- Press CTRL C
4- Press Alt F4. (At this point the message is already
copied)
5- Open a new message. Right click and paste or select
Edit and paste.
Netscape 3 - In the Netscape Mail window, click View/Document Source.
Netscape 4.xx - Double click on the email in your inbox. Click on View
- Headers - All.
PINE - You have to turn on the header option in setup, then just hit
"h" to get headers.
Yahoo - 1.Log into your Yahoo! Mail account.
2.Click the "Options" link on the left-hand navigation bar.
3.Click the "Mail Preferences" link on the right.
4.Locate the Show Headers heading and select "All."
5.Click the "Save" button to put your new settings into
effect.

Programs that do not comply with any Internet standards (like cc-Mail,
Beyond Mail, VAX VMS) throw away the headers. You will not be able to
get headers from these e-mail messages.

Aussie tells us that in Pegasus to view the full headers for each
message, use CTRL-H. This will show the full headers for the
particular message, but will not add them to any reply or forward. You
need to cut/paste the message into the reply/forward to send these
headers.

Richard tells us with Nettamer, a MS DOS based email and USENET group
reader you must save the message as an ASCII file, then the full
header will be displayed when you open the saved file with your

favorite ASCII editor.

At this point if you are "pushing the envelope" on your ability to figure out how to get that complaint to the correct person, I would suggest joining the Usenet group alt.spam or news.admin.net-abuse.email and post the message with a title like "Please help me decipher this header". Unfortunately there is no "single" place to complain to about spam (or Unsolicited Commercial E-Mail). Complaints have to be directed to the correct ISP (Internet Service Provider) that the spam originated from. See the below section entitled "Reporting spam".

URL's to help you figure out how to look at the headers:
http://www.concentric.net/~Nvam
http://www.rahul.net/falk/mailtrack.html

A little different description of headers:
http://help.mindspring.com/features/emailheaders/index.htm
http://help.mindspring.com/features/emailheaders/extended.htm
http://www.mcs.net/~jcr/junkemaildeal.html - Another Header Analysis
http://www.stopspam.org/email/headers/headers.html - In depth header analysis

There is spamming software that sends the e-mail directly to your computer. This makes only one received line in the e-mail making your life many times easier. The computer that is not your computer is the spamming computer.

Also, please look through the body of the message for e-mail addresses to reply to. Complain to the postmasters of those sites also (see below for a list of complaint addresses).

Gregory tells us that assuming a reasonably standard and recent sendmail setup, a Received line that looks like :

Received: from host1 (host2 [ww.xx.yy.zz]) by host3 (8.7.5/8.7.3) with SMTP id MAA04298; Thu, 18 Jul 1996 12:18:06 -0600

shows four pieces of useful information (reading from back to front, in order of decreasing reliability):
- The host that added the Received line (host3)
- The IP address of the incoming SMTP connection (ww.xx.yy.zz)
- The reverse-DNS lookup of that IP address (host2)
- The name the sender used in the SMTP HELO command when they connected (host1).

Looking at the below we see 6 received lines. Received lines are like links in a chain. The message is passed from one computer to the next with no breaks in the chain. The received lines indicate that it ended up at ddi.digital.net (my computer) from mail.bestnetpc.com. It was received at mail.bestnetpc.com from unknown (HELO paul-s.-aiello) ([205.160.183.123]). The last three lines suggests that it was

received at in2.|bm.net from mh.tomsurl|.com and from
reb50.rs41|1date.net. Since none of these computers are in the first
two received lines then we can ignore these lines and every received
entry after this line (this UCE had 4 or 5 more faked Received lines
in it that were deleted for this example). We also know that these
lines are faked because no domain name has a "|" character in the
name. Domain names only have alphabetic or numeric characters in the
name.

Do not get confused by the "Received: from unknown" portion. The word
"unknown" can be *anything* and should be ignored, this is whatever
the spammer put in the SMTP HELO command when they connected to the
SMTP server.

Received: from mail.bestnetpc.com (IDENT:qmailr@mail.bestnetpc.com
[205.160.183.3]) by ddi.digital.net (8.9.1a/8.9.1) with SMTP id
CAA10768 for <gandalf@digital.net>; Thu, 26 Nov 1998 02:55:11 -0500
(EST)
Received: (qmail 25259 invoked from network); 26 Nov 1998 08:05:49 -
0000
Received: from unknown (HELO paul-s.-aiello) ([205.160.183.123]) by
mail.bestnetpc.com with SMTP; 26 Nov 1998 08:05:49 -0000
Received: (from uudp@lcl|lhost) by in2.|bm.net (8.6.9/8.6.9) id
CFF569794 for <suppressed>; Thursday, November 26, 1998
Received: from tomsurl|.com (mh.tomsurl|.com [100.257.57.69]) by
m4.tomsurl|.com (8.6.12/8.6.12) with ESMTP id PAA21932 Thursday,
November 26, 1998
Received: from reb50.rs41|1date.net (root@reb50.rs41|1date.net
[256.36.1.176]) by tomsurl|.com (8.6.12/8.6.12) with ESMTP id
PBA023891 for <suppressed>;

So we complain to whomever owns unknown (HELO paul-s.-aiello)
([205.160.183.123]). Make sure that you do a nslookup (or use
http://samspade.org/t/ , put the address in the section "address
digger", click on Whois IP block and Traceroute and click on "do
stuff") on the IP address's. I try to verify 205.160.183.123 is paul-
s.-aiello. Indeed paul-s.-aiello does not even exist and
205.160.183.123 does not resolve to a name when I do a NSLookup. Next
would be a traceroute. See further below for more in-depth tracking
on resolving an IP.

IP portion = 205.160.183.123

Traceroute 205.160.183.123 gives us:
Step Host IP
Find route from: 0.0.0.0 to: 205.160.183.123 (205.160.183.123), Max 30
hops, 40 byte packets
<snip>
13 acsi-sw-gw.customer.alter.net. (157.130.128.26): 235ms
14 atlant-ga-2.espire.net. (206.222.97.24): 272ms
15 206.222.104.37 (206.222.104.37): 279ms
16 orland-fl-1-a5-0.espire.net. (206.222.99.7): 362ms

```
17 iag.net.orland-fl-1.espire.net. (206.222.106.6 ): 195ms
18 d1.s0.gw.dayb.fl.iag.net. (207.30.70.38 ): 230ms
19 s0.gw.bestnetpc.net. (207.30.70.254 ): 231ms
20 * * *
21 205.160.183.123 (205.160.183.123): 372ms
```

See the traceroute section below for how to interpret the "*" (and other codes) that are returned from a traceroute.

Note - if you see something like the following realize that the only portion you can trust is within the "([" and the "])". The spammer put in the (faked) portion "mail.zebra.net (209.12.13.2)" :
Received: from mail.zebra.net (209.12.13.2) ([209.12.69.42])

Kamiel tells us that you might also want to make sure that the IP is not hosted by an intermediary site. Check it out at:
http://www.arin.net

You should complain to the abuse@ or postmaster@<Last Two or Three words at the end of the name>. I would complain to abuse@iag.net OR abuse@espire.net (but NOT both sites) since after looking below at the list of complaint addresses in this FAQ there are no alternate addresses for iag.net or espire.net. Unless it is a "major provider" (someone in the below complaint list) I usually complain to the upstream provider rather than risk the chance of complaining to the spammer and being ignored. If you go too far up the chain, however, it may take quite some time for the complaint to filter down to the correct person.

Louise tells us that you are entitled to make an 'alleged' accusation but to prevent yourself from being libel, prefix your statement with:-
"Without prejudice: I suspect you are the culprit of such and such."

The constitutional and legal boundary of 'Without prejudice' exempts Politician's opinions being spoken publicly and this prefix is often adopted by Solicitors (English) or Lawyers/Attorneys (USA).

I use :
abuse@XXXXX - Without prejudice I submit to you this Unsolicited Commercial E-Mail is from your user XXXX. UCE is unappreciated because it costs my provider (and ultimately myself) money to process just like an unsolicited FAX. Please look into this. Thank you.

BE SURE to verify the IP address. Windows '95 machines place the name of the machine as the "name" and place the real IP address after the name, meaning a spammer can give a legitimate "name" of someone else to get someone innocent in trouble. A spammer at cyberpromo changed their SMTP HELO so that it claimed to be from Compuserve. The Received line looked like the below, but a quick verification of the IP address 208.9.65.20 showed it was indeed from cyberpromo :

Received: from dub-img-4.compuserve.com (cyberpromo.com [208.9.65.20])
by karpes.stu.rpi.edu

The below e-mail was passed to me thru a "mule" (un1.satlink.com [200.9.212.3]). The Spammer hijacked an open SMTP port to reroute e-mail to me:
Received: from un1.satlink.com (un1.satlink.com [200.9.212.3]) by ddi.digital.net (8.9.1a/8.9.1) with ESMTP id GAA06372; Fri, 27 Nov 1998 06:53:20 -0500 (EST)
Received: from usa.net ([209.86.128.234]) by un1.satlink.com (Netscape Messaging Server 3.54) with SMTP id AAT2FEA; Fri, 27 Nov 1998 08:46:07 -0200

A NSLookup on 209.86.128.234 resolves to user38ld07a.dialup.mindspring.com, so after I complain to mindspring.com I also send the postmaster of the open SMTP port the following :
postmaster@XXXXX - Your SMTP mail server XXXXX was used as a mule to pass (and waste your system resources) this e-mail on to me. You can stop your SMTP port from allowing rerouting of e-mail back outside of your domain if you wish to. FYI only. Info on how to block your server, see:
http://maps.vix.com/tsi/
http://mail-abuse.org/rbl/usage.html
http://samspade.org/t/
http://www.abuse.net/relay.html - Test for server vulnerability

Now that Cable Modems are so popular, companies are starting to put their "personal" e-mail servers on cable / DSL modems and are (of course) not configuring them correctly. I received UCE from an open SMTP server:
Received: from SDMAIN (DT1-A-hfc-0251-d1132e93.rdc1.sdca.coxatwork.com [209.19.46.147]) by ddi.digital.net (8.9.3/05.21.76) with SMTP id SAA04761; Fri, 30 Mar 2001 18:35:24 -0500 (EST)
Received: from Received: (qmail 554 invoked from network); 25 Mar 2001 23:56:02 (ip207.miami41.fl.pub-ip.psi.net [38.37.111.207]) by SDMAIN; Fri, 30 Mar 2001 10:19:58 -0800

Complain to Cox (abuse@home.com in this case) about their open SMTP server.

There are some systems that "claim" to "cloak" e-mail. It is not true. If you receive one that looks like the following :

Received: from relay4.ispam.net (root@[207.124.161.39]) by ddi.digital.net (8.8.5/8.8.5) with ESMTP id KAA28969 for <gandalf@digital.net>; Thu, 26 Jun 1997 10:41:46 -0400 (EDT)
Received: from --- CLOAKED! ---
or
Received: from cerberus.njsmu.com ([204.142.120.2]) by ddi.digital.net (8.8.5/8.8.5) with ESMTP id HAA06250 for <gandalf@digital.net>; Mon, 25 Jan 1999 07:11:18 -0500 (EST)
From: hostme39@aol.com
Received: from The.sender.of.this.untracable.email.used.MAILGOD.by.IMI

It is still broken down as follows :
- The route the e-mail took originated from one of the systems above the line marked "cloaked" or the line "untraceable" (in fact this makes it even easier to trace). There is no magic to it. Complain to that provider. If you get no response from the site that spammed, you should ask your provider to no longer allow the above site [207.124.161.39] to connect to your system.

It has been kindly pointed out to me that there is a "feature" (read "bug") in the UNIX mail spool wherein the person e-mailing you a message can append a "message" (with the headers) to the end of their message. It makes the mail reader think you have 2 messages when the joker that sent the original message only sent one message (with a fake message appended). If the headers look *really* screwy, you might look at the message before the screwy message and consider if it may not be a "joke" message.

There are also IBM mainframes and misconfigured Sun Sendmail machines (SMI-8.6/SMI-SVR4) that do not include the machine that they received the SMTP traffic from. You have to route the message (with headers) back to the postmaster at that system and ask them to tell you what the IP of the machine is that hooked into their system for that message.

An example of a Microsoft Exchange server that the "HELO" transaction is taken as the "From" portion (and is completely false) :
Received: from dpi.dpi-conseil.fr (dpi.dpi-conseil.fr [195.115.136.1]) by ddi.digital.net (8.9.3/8.9.3) with ESMTP id KAA06614 for <gandalf@ddi.digital.net>; Thu, 26 Aug 1999 10:51:31 -0400 (EDT)
Received: from FIREWALL ([192.168.0.254]) by dpi.dpi-conseil.fr with SMTP (Microsoft Exchange Internet Mail Service Version 5.5.2448.0) id QW11TJV1; Thu, 26 Aug 1999 16:44:38 +0200

It has also been pointed out that someone on your server can telnet back to the mail port and send you mail. This also makes the forgery virtually untraceable by you, but as always your admin should be able to catch the telnet back to the server. If they telnet to a foreign SMTP server and then use the "name" of a user on that system, it may appear to you that the message came from that user. Be very careful when making assumptions about where the e-mail came from.

Note for AOL users when looking at headers:
If you get double headers at the end of a message (like the below) the spammer has tacked on a extra set of headers to confuse the issue. Ignore everything except the last set of headers. These are the *real* headers.

---------- Headers ----------
Return-Path: <Gloria@me.net>

MAILING LIST messages
=====================================

Stephanie kindly defines MAILING LIST versus LISTSERVER :

A MAILING LIST is a type of email distribution in which email is sent
to a fixed site which holds a list of email recipients and mail is
distributed to those recipients automatically (or through a
moderator).

A LISTSERVER is a software program designed to manage one or more
mailing lists. One of the more popular packages is named "LISTSERV".
Besides Listserv, other popular packages include Listproc which is a
Unix Listserv clone (Listservs originated on BITNET), Majordomo and
Mailserve. Most importantly -- not all mailing lists run on
listservers, there are many mailing lists that are manually managed.

You may hear of mailing lists being referred to as many things, some
strange, some which on the surface make sense, like "email discussion

groups". But this isn't accurate either, since not all mailing lists are set up for discussion.

Istvan suggests "Majordomo software is remarkably funny about headers. It does not like headers which contain anything odd. All messages the software receives which do not conform to its rigorous standards are simply forwarded to the list moderator. It turns out this feature is effective at stopping between 80 and 90% of spam actually getting to the list."

Kirk tells us that you can set majordomo up so that new subscribers have to reply to a subscribe request, thus verifying the address is legit. Additionally the lists can be configured so that only subscribers can post. And finally you can put filters on content. I've got the list I manage configured to reject multipart email and email which contains html.

Richard mentions "Listserv can be configured to restrict non-members from sending to a list and can restrict spam based on the headers similar to Majordomo. I've used both of these features successfully. You can read more about Listserv capabilities, if you are interested, at:
http://www.lsoft.com/listserv.stm
http://www.lsoft.com/spamorama.html#FILTER (info on its spam filter)
I suspect that Listserv's spam filter may be better than Majordomo's (but I've not managed any Majordomo lists)."

Example Header appears below:
Received: from dir.bham.ac.uk (dir.bham.ac.uk [147.188.128.25]) by gol1.gol.com (8.7.5/8.6.9) with SMTP id GAA27292 for <XXXX@gol.com>; Sun, 5 May 1996 06:31:15 +0900 (JST)
Received: from bham.ac.uk by dir.bham.ac.uk with SMTP (PP) using DNS id <26706-38@dir.bham.ac.uk>; Sat, 4 May 1996 20:56:49 +0100
Received: from emout09.mail.aol.com (actually emout09.mx.aol.com) by bham.ac.uk with SMTP (PP); Sat, 4 May 1996 21:13:03 +0100
Received: by emout09.mail.aol.com (8.6.12/8.6.12) id PAA29156; Sat, 4 May 1996 15:35:53 -0400

Subject: CRaZy Complimentary Offer........

This is a post from Kevin Lipsitz for his "===>> FREE 1 yr. USA Magazine Subscriptions". The latest information indicates that the state of New York has told him he should stop abusing the Internet for a while ... lets hope it is forever. In relation to the Internet he makes a slimy used car salesman look like a saint.

For more info about "Krazy Kevin" or the Magazine Spam , Tony tells us the page "Stop Spam!" is available in html format at:
http://www.iac.co.jp/~issho/stop-spam.html

But as David reminds us, There are a million Kevin J. Lipsitz's out there. All selling magazines, Amway, vitamins, phone service, etc. All the losers who want to get rich quick, but can't start their own business.
Like :
http://com.primenet.com/spamking/

That having been said, e-mail from a Listserve can usually be broken down the same way as "normal" e-mail headers. There are just more waypoints along the way. As you can see from the above, the e-mail originated from :

emout09.mail.aol.com

You might with to also direct the listserve owner to look at & ask questions in news.admin.net-abuse.misc about how to keep spam off the listserve. It probably won't be all that difficult of a thing to do.

Reporting Spam and tracing a posted message
==========
If someone posts a message with your e-mail in the From: or Reply-To: field, it can (and will if you request) be canceled. Please repost the message to news.admin.net-abuse.misc WITH THE HEADERS (or it will probably be ignored) so that the message cam be canceled (the message-id is the most important) with a suggested subject of the following:

Subject: FORGERY <Subject from the Spam message>

Or you can look at the Cancel FAQ at :
http://www.ews.uiuc.edu/~tskirvin/faqs/cancel.html

Try to make sure that the message has not already been posted to news.admin.net-abuse.misc, news.admin.net-abuse.email or news.admin.net-abuse.usenet and that it is less than 4 or 5 days old. Chris reminds us that yes, there are a lot of annoying, off-topic and stupid postings out there. But that doesn't make it spam. _Really_. All we're concerned with is _volume_. Don't report any potential spams unless you see at least two copies in at least 4 groups. The content is irrelevant. Spam canceling cannot be by content.

For off topic posts, see http://ddi.digital.net/~gandalf/trollfaq.html

The first thing to do is to post the ENTIRE message (PLEASE put the header in or it will probably be ignored) to the newsgroup news.admin.net-abuse.misc. Do not reply or post it back to the original group. A suggested subject is one of the following:

Subject: EMP <Subject from the Spam message>
Subject: ECP <Subject from the Spam message>
Subject: UCE <Subject from the Spam message>
Subject: SEX <Subject from the Spam message>

Please include the original Subject: from the original Spam so that it can easily be spotted. Thank you.

Take a careful look at the header, if there are "curious characters" (characters that look like garbage) in the X-Mailer: line, or any other line in the header, then delete those characters otherwise the message may end up truncated. The offending line consists of the EIGHT characters D0 CF 11 E0 A1 B1 1A E1 (in hex).

If the post is particularly amusing (Spammer threat or a postmaster threat), put C&C in the subject. Seymour tells us it means Coffee and cats. This originated from a post claiming that a particular outrageous article had caused spewing of coffee into the keyboard and jumping while holding a cat, resulting in scratched thighs.

An Excessive Multiple Post (EMP) may exceed the spam threshold and may be canceled. An Excessive Cross Post (ECP) may not be canceled because it hasn't reached the threshold. A UCE is for Unsolicited Commercial Email, SEX is for off-topic sex-ad postings.

Make Money Fast message is immediately cancelable and are usually canceled already by others, so please do not report MMF posts. See MMF section below.

Tracing a fake post is probably easier than a fake e-mail because of some posting peculiarities. You just have to save and look at a few "normal" posts to try to spot peculiarities. Most people are not energetic to go to the lengths of the below, but you never know.

Dan reminds us that first you should gather the same post from *several* different sites (get your friends to mail the posts to you) and look at the "Path" line. Somewhere it should "branch". If there is a portion that is common to all posts, then the "actual" posting computer is (most likely) in that portion of the path. That should be the starting postmaster to contact. Be sure to do this expeditiously because the log files that help to trace these posts may be deleted daily.

If you *really* want to see some fake posts, look in alt.test or in the alt.binaries.warez.* groups.

A fake post:

Path:
....!news.sprintlink.net!in2.uu.net!news.net99.net!news!s46.phxslip4.in
direct.com!vac
From: XXX@indirect.com(Female User)
Subject: Femdom In Search of Naughty Boys
Message-ID: <DHLMvE.24H@goodnet.com>
Sender: XXX@indirect.com(Female User)
Nntp-Posting-Host: s46.phxslip4.indirect.com
Organization: Internet Direct, Inc.
X-Newsreader: Trumpet for Windows[Version 1.0 Rev B final beta #1]
Date: Mon, 6 Nov 1995 01:59:38 GMT
Approved: XXX@indirect.com
Lines: 13

This poor lady (Name deleted by suggestion) was abused by someone for a couple of days in an epic spam. Many messages were gathered. The message ID was different for several messages. But several anomalies showed an inept poster.

The headers were screwed up, and when looking at a selection of messages from several sites, the central site was news.net99.net, where goodnet.com gets / injects news at. This lead to the conclusion that either goodnet.com or news.net99.net should be contacted to see who the original spammer was. I never heard the results of this, but the spamming eventually stopped.

You can try looking at sites & see if they have that message by :
telnet s46.phxslip4.indirect.com 119
Connected to s46.phxslip4.indirect.com.
200 s46.phxslip4.indirect.com InterNetNews server INN 1.4 22-Dec-93 ready
head <DHLMvE.24H@goodnet.com>
430

Message was not found at that site, so it did not go thru that computer, or the article has already expired or been deleted off of that news reader.

If you wish to track a particular phrase, user-id (whatever) take a look at the URL for getting all the posts pertaining to "X" :

http://www.deja.com/
http://www.altavista.com/

WWW IP Lookup URL's
==========
http://samspade.org/t/ - My personal favorite. All the tools on one page.
http://www.amnesi.com/hostinfo/ipinfo.jhtml - Reverse lookup
http://cities.lk.net/trlist.html - Traceroute Lists by States and Backbone Maps List
http://www.net.cmu.edu/cgi-bin/netops.cgi - Traceroute and ping
Note : Studio42 lists its blocked users as: "All UU.Net dial-ups, thus most MSN subscribers and a percentage of Earthlink users."
http://www.studio42.com/cgi-spam/nph-traceroute.pl - Traceroute
http://www.studio42.com/cgi-spam/nph-nslookup.pl - NSLookup
http://www.studio42.com/cgi-spam/nph-dig.pl - Dig
Index to Traceroute pages:
http://dir.yahoo.com/Computers_and_Internet/Communications_and_Networking/Software/Networking/Utilities/Traceroute/
http://www.traceroute.org/
http://boardwatch.internet.com/traceroute.html - Traceroute Server Index
SWITCH WHOIS Gateway:
http://www.switch.ch/search/whois_form.html
Or
http://www.networksolutions.com/cgi-bin/whois/whois

http://www.ripe.net/db/whois.html - European countries WhoIs
http://www.apnic.net/apnic-bin/whois.pl - Asian Pacific WhoIs
whois.nic.or.kr - Korean Whois
http://www.arin.net/whois/arinwhois.html - North / South America WhoIs
http://mjhb.marina-del-rey.ca.us/cgi-bin/ipw.pl - Whois
IP to Lat - Lon (For those times when only a Tactical Nuke will do ;-
)) :
http://cello.cs.uiuc.edu/cgi-bin/slamm/ip2ll/
Yet Another IP to name:
http://cello.cs.uiuc.edu/cgi-bin/slamm/ip2name
What do those domain names mean :
http://www.alldomains.com/alltlds.html
http://www.ics.uci.edu/pub/websoft/wwwstat/country-codes.txt - Country
Codes for the last characters in a domain name
http://x.deja.com/article/660567270 - Badly Formed DNS article

Converting that IP to a name
============================
When all you have is a number the looks like "204.183.126.181", and no
computer name, then you have to figure out what the name of that
computer is. Most likely if you complain to "
postmaster@[204.183.126.181] " it will go directly to the spammer
themselves (if it goes anywhere at all).

If nothing else works, you might wish to go ahead and send a complaint
to postmaster@204.183.126.181. Ina tells us that the reason for this
is "that we've seen that forged DNS-records will mislead the
complainer. I've seen this done from time to time, and though not
common yet, it probably will become so."

Marty reminds us that there are some "special" IP's that are allocated
as private networks. These fall within the confines of 0.0.0.0 to
255.255.255.255 but should be ignored. The addresses are :

Class Start Address End Address
A 10.0.0.0 10.255.255.255
B 172.16.0.0 172.31.255.255
C 192.168.0.0 192.168.255.255
D 224.0.0.0 239.255.255.255 - Multicast
E 240.0.0.0 255.255.255.255 - Multicast
And the "special" addresses:
127.0.0.0/8 (Loopback address)

See :
http://www.umnet.umich.edu/groups/UMnet-
Routing/UAssignedPrivateIP.html

First off try using NSLookup (there is software for PC's, I use
http://samspade.org/t/ , put the address in the section "address
digger", click on Whois IP block and Traceroute and click on "do
stuff" or look at the URL's at the bottom of this FAQ). If the
NSLookup does not give you a name then try a Traceroute. Somewhere

you will get a "name" and at that point I would complain to the
postmaster@<that name>. See below for complaint addresses.

What to do with "strange" looking Web links
==========

http://1%30%38%35%338%31%32%39%32/ has some %-encoded characters, but
decoding those gives http://1085381292/
1085381292 is just another way of writing the IP address
64.177.154.172

To convert a decimal number to a "dotted quad octet" :
http://3438189385/yt/rotten1/

You can put this "strange" number in at any of the following :
http://samspade.org/t/
http://www.webspawner.com/users/ipconverter
http://www.isit.nl/cgi-bin/isitbv/ip.cgi

http://www.netdemon.net/ - Automatic url decoder built in for Windows
95.
As well as the Windows 95 based URL decoding tool, it has been ported
and made available to everyone as a CGI:
http://www.netdemon.net/decode.html
This CGI handles ALL the recent types of spammer tricks, including
decimal, octal, hex addresses, username/password tricks, hex encoded
characters, and redirectors.

And you get an answer like:
204.238.155.73

You can try the "strange" number at :
http://www.abuse.net/cgi-bin/unpackit

Kirk tells us wsftp and the traceroute that comes with wsftp will take
those number and automatically translate them into the IP addresses.

Or under Widows 95 :
start --> Programs --> Accessories --> Calculator
Choose view --> Scientific
Put in the "strange" number (3438189385) and click on HEX. You get:
CCEE9B49

Then type in each of the two characters in HEX and click DEC after
each number:
CC = 204
EE = 238
9B = 155
49 = 73

Viola ... Your IP is 204.238.155.73

For more general funny URLs, like
http://23123443~32:3758493879/www.samspade.org/10.00.0.1/xxxstuff.html

, try http://samspade.org/t/url.cgi?x

If you get a strange URL like:
http://www.nt.dahouc.mx^T^B^T^E^T.com|net.fr^B^E^T^B^T^E^T^T.ooooooooo
ooooooooo.com:80/nt/dahouchy/
Where the ^B = Control "B", ^T = Control "T", etc. you can look at the
very end right before the first "/" to figure out what the site is, on
this case it is ooooooooooooooooo.com, using port 80. The rest of it
is "decoded" by ooooooooooooooooo.com to give the "real" site name.
For MS Windows the program at http://www.netdemon.net will decode
these with ease.

If you are looking thru the HTML source and yo get something like:
<!-- CHANGE EMAIL ADDRESS IN ACTION OF FORM --><FORM name="form"
method="post"
action="mailto:mor&#11
6;mail6@yahoo.&
#99;om?subject=&#68
;ebt1" enctype="text/plain"
Then take the "funny" looking part and paste it into the "Obfuscated
URLs" section of http://samspade.org/t/ like so:
http://mailto:mor&#116
;mail6@yahoo.&#
99;om?subject=D
ebt&#49
And you get:
http://mailto:mortmail6@yahoo.com?subject=Debt1

So then you send a complaint to yahoo.com asking them to delete their
user mortmail6@yahoo.com.

If the site is a IP address like "198.41.0.5", you can do a DNS lookup
to backtrack the site. A DNS lookup or a host command (see example
below) uses the info in a Domain Name Server database. This is the
same info that is used for packet routing. The UNIX command is :

nslookup 198.41.0.5
Commands:
nslookup hostname dns_server
or
dig @dns_server hostname

And you get :
Name: whois.arin.net
Addresses: 198.41.0.5, 198.41.0.6

If you are having problems with this, Josh suggests you try :

$ nslookup
Default Server: ddi.digital.net
Address: 198.69.104.2

```
> set type=ptr
> 181.126.183.204.in-addr.arpa
Server: ddi.digital.net
Address: 198.69.104.2

Non-authoritative answer:
181.126.183.204.in-addr.arpa name = kjl.com

Authoritative answers can be found from:
126.183.204.IN-ADDR.ARPA nameserver = escape.com
126.183.204.IN-ADDR.ARPA nameserver = ns.uu.net
escape.com Internet address = 198.6.71.10
ns.uu.net Internet address = 137.39.1.3

Looking up IP address ownership

InterNIC is your friend. The InterNIC Registration Services Host
contains ONLY Internet Information (Networks, ASN's, Domains, and
POC's). Please use the whois server at nic.ddn.mil for MILNET
Information. Try :

Bruce tells us that there are three places where you can lookup an IP
address, being the current trinity of Regional Internet Registries.
These RIRs are:

Asia and Pacific Rim: APNIC - Asia Pacific Network Information Centre
whois.apnic.net
http://www.apnic.net/apnic-bin/whois.pl

Americas and parts of Africa: ARIN - American Registry for Internet
Numbers
whois.arin.net
http://www.arin.net/cgi-bin/whois.pl

Europe and Surrounding Areas: RIPE NCC - R?seaux IP Europ?ens,
Network Coordination Centre
whois.ripe.net
http://www.ripe.net/db/whois.html

Under Unix, you can use:
whois -h whois.arin.net 198.41.0.5
or
whois -h whois.apnic.net 198.41.0.5
or
whois -h whois.ripe.net 198.41.0.5

Each of the above three RIRs may refer to one of the other RIRs.
Please do not send complaints to any of the RIRs as they merely
provide contact information, and are not related in any way to the
possible spammers.

Dan has said that the NIC technical contact is the address to contact
if there is a technical problem with the name service records for that
domain. Sending spam notifications to the zone tech contact is an
abuse of the NIC whois records. Sending to the admin contact is
```

marginally more justifiable, but should only be used after postmaster and abuse address has been tried. Sending a complaint to all of the intermediate sites in a traceroute should *not* be done, these sites in all likelyhood cannot do anything about the problem (with the exception of possibly the next to last site).

For domains that have invalid contact information you should contact the appropriate RIR (see above)

To see who the upstream provider is, try :

traceroute ip30.abq-dialin.hollyberry.com

You might get :
traceroute to IP30.ABQ-DIALIN.HOLLYBERRY.COM (165.247.201.30), 30 hops max, 38 byte packets
1 cpe2.Washington.mci.net (192.41.177.181) 190 ms 210 ms 120 ms
2 borderx1-hssi2-0.Washington.mci.net (204.70.74.101) 100 ms 100 ms 60 ms
3 core-fddi-0.Washington.mci.net (204.70.2.1) 180 ms 130 ms 70 ms
4 core1-hssi-4.LosAngeles.mci.net (204.70.1.177) 150 ms 140 ms 150 ms
5 core-hssi-4.Bloomington.mci.net (204.70.1.142) 180 ms 200 ms 180 ms
6 border1-fddi-0.Bloomington.mci.net (204.70.2.130) 170 ms 290 ms 240 ms
7 internet-direct.Bloomington.mci.net (204.70.48.30) 300 ms 210 ms 270 ms
8 165.247.70.1 (165.247.70.1) 180 ms 240 ms 180 ms
9 abq-phx-gw1.indirect.com (165.247.202.253) 290 ms 220 ms 230 ms
10 * * *

The first column is the "hop" that traceroute is working on. The next is the "computer" (and IP) of the computer at that hop. The last three numbers are the milliseconds it took to get an answer from that computer.

You can get "codes" instead of the milliseconds. An example of a "code" is the "* * *" for hop 10.

Here is a list of the codes:
? Unknown packet type.
H Host unreachable.
N Network unreachable.
P Protocol unreachable.
Q Source quench.
U Port unreachable.
* The Traceroute Packet timed out (did not return to you).

Chris clarifies that a '*' in actuality could be caused by a timeout OR something listening on the UDP ports traceroute uses to get it's port unreachables back from, to work, OR the router simply does not support ICMP/UDP unreachable ports and traceroute cannot determine

it's status so it displays asterisks.

Humm..... Seems that after abq-phx-gw1.indirect.com we get no response, so *that* is who I would complain to... or you can just send a message to postmaster@indirect.com ... If that doesn't work then complain to MCI.net.

JamBreaker sez : Be sure to let the traceroute go until the traceroute stops after 30 hops or so. A reply of "* * *" doesn't mean that you've got the right destination; it just means that either the gateways don't send ICMP "time exceeded" messages or that they send them with a ttl (time-to-live) too small to reach you.

Try 'dig' (or one of its derivatives), it is used to search DNS records :
(For the software :
http://www.rediris.es/ftp/infoiris/red/ip/dns/dig-2.0/)

yourhost> dig -x 38.11.185.89

Getting a World Wide Web page busted
==========

Many spammers use throw away accounts, accounts that they know will be deleted as soon as the service gets a complaint. Of course the spammers mentality is "if it is free it is for me to abuse". If the spammer really annoyed you then you might wish to dig and get every account possible deleted. What you need to do is actually go to the WWW page that they advertise, look at the page and usually the page

will redirect you to another site (or possibly redirect 2 or 3 times). Send a complaint to these sites (with the original spam). It is important to explain to the site you are complaining to how you got to their site so that they don't ignore you.

In Netscape and Explorer there is an option to "view source". This will pop up a page with all of the http source from the page. This page will have all of the "links" to the next site.

If you look at the http source and it is unreadable (and sez "Haywyre"), take a look at :
http://www.netdemon.net/haywyre/

A list of Usenet complaint addresses
==========
O.K... So you have a common site that you can complain to. Good. If you cannot figure out where the message came from, you can post the FULL HEADERS (this is *very* important for tracing) to alt.spam, news.admin.net-abuse.misc, news.admin.net-abuse.email or news.admin.net-abuse.usenet (see the section entitled Reporting Spam and tracing a posted message). Usually you can get someone to help with the message.

If you complain (or asked to be removed) to the spammer directly, you may just be confirming a "real" live e-mail address, which may lead to even more junk e-mail. I would suggest complaining to the owner of the site only. You can send e-mail to foo.bar.com@abuse.net (where foo.bar.com is the provider you are complaining to) and it will get forwarded to the "best" e-mail address.. See http://www.abuse.net/

There is a list of admins to contact (besides the list contained here):
http://www-fofa.concordia.ca/spam/complaints.shtml

Greg reminds us that if you are complaining to a postmaster about a week-old post, don't bother. It's not on their server, they can't verify it. Make sure you use terms correctly. A recent trend is to call any off-topic post "spam". It's not. I deal with spammers and off-topic or advertising posters differently. Other providers do also. Also, try to keep the clutter in your complaints down. I don't need a copy of the referenced RFC or statute. It doesn't help either of us if I can't find your complaint in between all the mumbo jumbo.

Send complaint with FULL HEADERS in e-mail to any or all of the below :
abuse@spammer.site.net
postmaster@spammer.site.net
master@spammer.site.net (This seems to be the normal addess for many Asian companies)

The following providers have now created an "abuse" address, so I have listed them to shorten the FAQ. Just send an address to abuse@<the provider listed> for a complaint, i.e abuse@bikerider.com :

From : David Jackson (djackson@aol.net) (and this applies to *any*
abuse) :
To report an instance of USENET abuse send mail to postmaster@aol.com
- please remember to include a complete copy of the USENET article,
including all headers, to help us quickly quash the abuse.

Scott reminds us :
It might also be a good idea to remind people that sometimes the
postmaster _is_ the spammer. Joe Spam might have his own domain (since
they _used_ to be free) inside of which they are the postmaster. This
is terrifyingly common with net.twits (kooks, etc.) but seems rare for

spam. A quick note that if the spammer is the admin contact in whois, notifying the postmaster will surely generate laughs on their end.

In the letter to the postmaster, you might wish to mention Joel's very good FAQ about advertising on the Internet :

http://www.cs.ruu.nl/wais/html/na-dir/usenet/advertising/how-to/part1.html
http://www.cis.ohio-state.edu/hypertext/faq/usenet/usenet/advertising/how-to/part1/faq.html

One company that was suckered in by a bulk e-mail company received 35 responses to the addresses in the body of the message, and 100% of them were negative. Additionally the ISP that hosted them received 15 complaints asking for them to terminate their service. UUNet received 50+ complaints about this UCE.

And where they *should* advertise :
http://www.cs.ruu.nl/wais/html/na-dir/finding-groups/general.html

Additional business links:
http://www-personal.umich.edu/~jmm/papers.html#efi - Economic FAQ about the Internet
http://www.si.umich.edu/Classes/555/resources/si555syllabus.html - Electronic Commerce
http://www.si.umich.edu/Classes/555/resources/addition.html - Additional Resources

If you don't get a proper response from the postmaster, remember, Whois - rs.internic.net is your friend. See the section labeled "Converting that IP to a name" for more information on Internic.

This *should* get you a person to talk to & their personal e-mail address. If you don't get any response from that postmaster, then you should try the provider to that site. This gets a little trickier, but a traceroute should show you the upstream provider, and from there you can try contacting the postmasters of *that* site.

Any non-profit organization (like a University) should be very happy to help get rid of a spammer if the non-profit organizations resources are being used to spam a for-profit business. The IRS can take their non-profit status away for such things. Talk to the legal council at the non-profit organization if you don't get a positive response from the postmaster.

Worst case, a site can be UDP (Usenet Death Penalty) out so that other sites stop accepting news or even e-mail from that site. They are cut off from the net. Decisions like this are discussed in the news group news.admin.net-abuse.misc .

If the spammer site has problems trying to figure out where the spam came from, they can *always* get help from the denizens of

news.admin.net-abuse.misc, but have them take a look at their logs
first and see if they see something like (Thanks to help from
Michael):

My news logs (for INND) are:
$ cd /usr/log/news
$ ls
OLD expire.log news.err unwanted.log
errlog news news.notice
expire.list news.crit nntpsend.log

and here is my syslog.conf:
news stuff
news.crit /usr/log/news/news.crit
news.err /usr/log/news/news.err
news.notice /usr/log/news/news.notice
news.info /usr/log/news/news
news.debug /usr/log/news/news.debug

but, what they need to remember, is they HAVE TO LOOK QUICK!. INND
expire puts all these logs in OLD, and recycles them, and expires them
at the 7th day (and gzips them), i.e., OLD/:
ls -l news.?.*
-r--r----- 1 news news 181098 May 23 06:26 news.1.gz
....
-r--r----- 1 news news 319343 May 17 06:29 news.7.gz

so... to grep an old log looking for sfa.ufl.edu:
(the {nn} is how many days ago, 1 is yesterday, 2 is 2 days ago, etc)
cd {log/OLD}
gunzip -c news.1.gz | grep sfa.ufl.edu | more

Hoaxes, Fraud on the Internet and The MMF (Make Money Fast) Posts
==========
There is also a letter circulating about "dying boy wants postcards"
(Craig Shergold) which is no longer true. Same as with the Blue Star
LSD addicting children hoax. See Urban Folklore FAQ at :
http://www.urbanlegends.com/classic/craig.shergold/craig_nyt.html
http://www.urbanlegends.com/classic/blue.star.tattoos/blue_star_lsd_fa
q.html

A complete Urban Legends listings (It is big) :
http://www.urbanlegends.com/afu.faq/index.html

Some other hoax pages:
http://www.symantec.com/avcenter/hoax.html - Symantec Hoax Page
http://www.icsa.net/services/consortia/anti-virus/alerthoax.shtml -
Hoax

http://ciac.llnl.gov/ciac/CIACChainLetters.html - Chain Letters
http://www.snopes.com/spoons/faxlore/billgate.htm - All about the Bill

Gates Hoax chain letter that was followed by a hoax letter from The Gap, Bath & Body Works, Old Navy, Abercrombie & Fitch and probably just about any company you can imagine.
http://www.vmyths.com - Virus Myths
http://www.hoaxkill.com - Look on the site and see if an e-mail is a hoax and if you can't find it forward your e-mails to hoaxcheck@hoaxkill.com and they will look at it for you. If it is a hoax send it to hoaxkill@hoaxkill.com and they will notify everyone in the e-mail that the message is a hoax

And why Disney is *not* giving away 13,000 free trips, why Bill Gates is not collecting e-mail addresses (and many other hoaxes):
http://www.deja.com/article/406150013

My usual response goes something like:
<Quote part of the hoax)
> Hi! My name is Janelle McCan, Founder of the Gap. I am offering
> thirty five dollar gift certificates to every seven people you send
> this to.

If you ever get an e-mail that tells you to forward it to other people, it is *almost certainly* a hoax. Specifically if it tells you about a "new virus" or free money. Before you send it along *please* look it up by going to http://www.google.com and typing words from the e-mail into the search line, like (in this example) and the word hoax:
Gap gift certificates e-mail hoax

Sorry. This is a hoax. See:
http://www.snopes.com/inboxer/nothing/billgate.htm

Plus, if the Gap could trace your e-mails, don't you think the Government could do the same and wouldn't that make you worry *just* a bit? Not that they aren't trying, see:
http://www.zdnet.com/anchordesk/stories/story/0,10738,2606926,00.html

But anyway, there are no free Gap certificates, no free $1,000 bills from Microsoft or any free trips to Disney. Sorry.

PLEASE read about the Gullibility Virus. This is a very funny editorial to be passed along to your friends who send you all these kinds of hoaxes :
http://www.sccu.edu/faculty/R_Harris/warning.htm
<end of hoax message>

There has been some discussion that such things should be canceled because they exceed the BI 20 index. They are untrue and they waste bandwidth.

Virus updates, scams and hoaxes:
From Security Wire Digest (http://www.infosecuritymag.com/newsletter
)
MTX-TESTING E-MAIL SCAMS USERS
A scam artist has been making money off gullible users by sending a
virus alert about testing for the MTX Worm. The e-mail advises users
to call a 900 number, which costs $2.69 per minute, for a recorded
message that instructs users to visit three antivirus Web sites--sites
that provide AV definitions free of charge. Always check virus alerts
and possible hoaxes against hoax web sites or legitimate antivirus
authorities, such as Sophos, Trend Micro and TruSecure.
http://www.vmyths.com
http://www.sophos.com
http://www.trendmicro.com
http://www.trusecure.com

Robert Heinlein has a saying "TANSTAAFL" (There Ain't No Such Thing As
A Free Lunch). If it looks too good, it probably is.
http://www.deja.com/article/518601356 - Article on "HOW TO CONVERT $99
INTO $588 AS MANY TIMES AS YOU WANT" fraud
There is also a fraud promising you millions of dollars from a
"government official" in a small country with a "secret" bank account,
but all he needs to transfer the money to you is:
(a)Your Company's Name and Address
(b)Your full Name(s), Telephone, and Fax numbers (Private and Company)
(c)Your Bank Name, Address, Account number, Telex and swift code (if
any).
If you send this information, they have all the information they need
to drain your account of all money that is in there. See :
http://home.rica.net/alphae/419coal/news1998.htm
http://home.rica.net/alphae/419coal/ - How to contact the US Gov't
about this scheme
Send scams to 419.fcd@usss.treas.gov (Put No Monetary Loss in the
header if you haven't lost any money)
http://www.cbintel.com/nigeriafraud.htm
http://www.byte.com/column/vox/BYT19990707S0001

In the United States :
The U.S. Securities and Exchange Commission web page (stock
solicitations, stock manipulation by sending out spam after buying a

stock to get others to buy the stock and increase the price)
http://www.sec.gov/enforce/comctr.htm or Email:
enforcement@sec.gov
http://www.sec.gov/consumer/iemmtips.htm - Pump and Dump tips
http://www.sec.gov/news/netfraud.htm - SEC prosecutions
Net Securities scam: Report to cyberfraud@nasaa.org
The Food and Drug Administration :
http://www.fda.gov/opacom/backgrounders/problem.html
Medical Items:
US Food and Drug Administration - MedWatch - Medwatch@OC.FDA.GOV
I sent Medwatch a spam about a "miracle fat removing creme" and I
received the following, so for non-prescribed drugs I guess you retto
the following:
Thank you for your comments. The office of MedWatch does not look into
this type of complaint. This information may be given directly to FDA
via the web. Please go to http://www.fda.gov. Click on: Buying
Medical Products Online. Scroll down to the bottom of the page and
click on: Notify FDA About Problem Websites.
http://www.fda.gov/oc/buyonline/buyonlineform.htm

Make Money Fast is a pyramid (or Ponzi) scheme where you are in a
chain of people wherein you send money to a few people and try to
recruit others to send money to you. Basically if it even remotely
smells like a MMF scheme it is illegal (even tho' many of the MMF
schemes "claim" to have been looked at by a lawyer or checked by the
United States Postal Authorities).

For a list of countries where Make Money Fast is illegal see :
http://www.stopspam.org/usenet/mmf/mmf_table.html
http://www.stopspam.org/usenet/mmf/
http://ga.to/mmf/
Scams can be found at places like :
http://ga.to/mmf/currency.html

Please, only report MMFs in news.admin.net-abuse.misc if they're spam
and you've seen it in lots of groups and / or the postmaster/user are
defiantly stupid.

MMFs should be reported to the user and their postmaster and the
following :

Where to send complaints to in Australia:
Ministry of Fair Trading
P O Box 6355
EAST PERTH 6536

In Canada I believe that the applicable Canadian description can be
found at :
http://www.rcmp-grc.gc.ca/html/commerc.htm
And from the Canadian Department of Justice server (
http://canada.justice.gc.ca/):
STATUTES OF CANADA, C, Competition - PART VI OFFENSES IN RELATION TO

COMPETITION - Definition of "scheme of pyramid selling" - Section 55.1
EXTRACT FROM THE CANADIAN CRIMINAL CODE
Chain-letters
206. (1) Every one is guilty of an indictable offense and liable to
imprisonment for a term not exceeding two years who . . .
Pyramid Schemes
55.1 (1) For the purposes of this section, "scheme of pyramid selling"
means a multi-level marketing plan whereby ...

United Kingdoms:
Consumer Affairs and Competition Policy Directorate 2
Department of Trade and Industry, 1 Victoria Street, London, SW1H 0ET
Tel: 0171 215 0344
Have a booklet called 'The Trading Schemes Guide' which is very useful
indeed and explains the UK legal details on these things,

In the United States, you should write the Federal Trade Commission
Ms. Broder
(bbroder@ftc.gov). For more info on pyramid schemes use
pyramid@ftc.gov
To find your nearest postal inspector in the USA, see URL
http://www.usps.gov/ncsc/locators/find-is.html
California MMF law :
http://www.leginfo.ca.gov/cgi-
bin/calawquery?codesection=pen&codebody=endless

DOES ANYBODY HAVE POSTAL INSPECTOR ADDRESSES FOR OTHER COUNTRIES THAT
PONZI / MMF SCHEMES ARE ILLEGAL IN?

Another type of fraud is one where the spammer sends out a HTML
message with a message / URL link that says "try a new game". When
you click on the URL there is nothing related to the original message.
What the spammer has (at the very least) done is gotten some money for
himself by you clicking on his "click to pay" URL. Worst case the
spammer may have taken advatage of a security hole in your brower and
done something nefarious. Bottom line, do not click on the spammers
URL, look at the HTML and complain to the upstream provider.

Trying to catch the suspect still logged on
==========

If you think you know a machine close to the spammer, you can change
your default DNS lookup server (and get *lots* more info ;-)) by :
$ nslookup
> server wb3ffv.abs.net
Default Server: wb3ffv.abs.net
Address: 206.42.80.130
> ls -d kjl.com
[wb3ffv.abs.net]
kjl.com. SOA kjl.com dns-admin.abs.net. (10
21600 3600604800 86400)
kjl.com. NS ns1.abs.net

```
kjl.com. NS ns2.abs.net
kjl.com. MX 10 abs.net
kjl.com. SOA kjl.com dns-admin.abs.net. (10
21600 3600604800 86400)
```

If you are quick enough, you can see if the spammer is still on by :

```
rusers rust.nmt.edu
```

And you might get :

```
kuller ray timbers jweinman timbers john timbers rayzer
```

Assuming that the spammer is from ingress.com you can expand the Spammers UserID (some sites have expn / vrfy turned off) by:

```
> telnet ingress.com smtp
Trying 199.171.57.2 ...
Connected to ingress.com.
Escape character is '^]'.
220 ingress.com Sendmail 4.1/SMI-4.1 ready at Sun, 22 Oct 95 15:13:39
EDT
expn krazykev
250 Lipsitz Kevin <krazykev@kjl.com>
```

We connect to port 25 (smtp) and issues an expn command. Looks like krazykev@kjl.com is being used as a maildrop for this user. I'll would send my complaint to postmaster@kjl.com as well (not that it would do any good in Krazy Kevin's case... but the reply to your e-mail might be amusing).

To find out the Mail Exchange records, do a nslookup for the MX records only. You can then look up the expansion of the postmaster or root to see who they really are. For example :

```
% nslookup
> set type=mx
> gnn.com

gnn.com preference = 20, mail exchanger = mail-e1a.gnn.com
gnn.com preference = 10, mail exchanger = mail-e1b.gnn.com

% telnet mail-e1a.gnn.com smtp
220 mail-e1a.gnn.com ESMTP Sendmail 8.7.1/8.6.9 ready at Thu, 11 Jan
1996 12:54:26 -0500 (EST)
expn postmaster
250-<wross@ans.net>
250 <gnnadvisor@mail-e1a.gnn.com>
expn root
250-<mitch@ans.net>
250 <gnn-monitor@ans.net>
```

Duncan tells us 80% of sites that have EXPN and VRFY disabled are "vulnerable" to the following technique. The risk factor is not exactly huge it can only be used to test whether an address will

bounce at the tested box.
$ telnet localhost 25
Trying 127.0.0.1...
Connected to localhost.
Escape character is '^]'.

(The names of the computers have been changed to protect spammer's
accounts and my mailboxen. Naturally you would not normally probe your
local machine this way.)

This obviously only works when you are talking to the machine that
actually delviers the email, so pull out your copy of nslookup find
the MX records, and be sure to use the best MX. I sometimes use this
method to test for abuse, which is probably an alias--this method can
not distinigish between aliases and accounts.

You can use the 'host' command. It's really simple:
% host -t any domain.name

This will give you anything your name server can find out.

% host -t ns domain.name

This tells you the name servers. Not all systems have host, but it's a
small program which should be easy to compile (like whois).

The command "last" will tell where the spammer logged on from last,
but it has to be done by a user from that site. For example :

last imrket4u

Would produce :

```
imrket4u ttypf ip30.abq-dialin.hollyberry.com Fri Sep 15 00:27
- 00:34 (00:06)
imrket4u ttyq8 ip30.abq-dialin.hollyberry.com Fri Sep 15 00:19
- 00:20 (00:01)
imrket4u ttyqc abq-ts1 Thu Sep 14 20:42 - 22:21
(01:39)
imrket4u ttyqc rust.nmt.edu Thu Sep 14 18:39 - 18:41
(00:01)
imrket4u ttypb abq-ts1 Thu Sep 14 17:55 - 17:57
(00:02)
```

Filtering E-Mail BlackMail, procmail or News with Gnus
==========

Filtering with BlackMail. This is free software that works with
Mailers Smail, Sendmail, Qmail or Fetchmail under the OSes: Aix,
various BSD, Irix, Linux, NeXTStep 3.x, Solaris, SunOs, SVR4:
http://bitgate.com/spam/ - By Ken Hollis (Not me ...)
Or
http://www.jsm-net.demon.co.uk/blackmail/source

Get the procmail FAQ :

http://www.ii.com/internet/faqs/launchers/mail/filtering-faq/
or
http://www.best.com/~ii/internet/faqs/launchers/mail/filtering-faq/

http://www.ii.com/internet/robots/
or
http://www.best.com/~ii/internet/robots/

Procmail ruleset :
http://sepwww.stanford.edu/oldsep/joe/AntiJunkEmail.html

Or read about it when it is posted to :
Newsgroups: comp.mail.misc , comp.mail.elm , comp.mail.pine ,
comp.answers , news.answers
Subject: Filtering Mail FAQ

Bob tells me that Eudora Pro has a good filtering capability. You can
filer based on who you send e-mail to, known spammers, etc. Enough
filters and you may see hardly any Spam. Claris E-Mailer, likewise,
has a filter option.

Brian has a Gnus scorefile from the Internet blacklist :
http://www.cs.ubc.ca/spider/edmonds/usenet/gnus/BLACKLIST

Or his example global scorefile :
http://www.cs.ubc.ca/spider/edmonds/usenet/gnus/SCORE

Many news readers have a "kill" file that will filter out the posts
from either a certain user-id, or posts with certain titles. Each
news reader is unique. You might wish to read the help file on the

subject of kill files.

Rejecting E-Mail from domains that continue to Spam
==========
Spamfilters can be found at:
http://www.io.com/~johnbob/jm/index.html
http://www.samiam.org/spam/index.html
http://www-new.hrweb.org/spambouncer/

List of spammers:
http://www.samiam.org/spam/spammers.txt
http://www.idot.aol.com/preferredmail/

Or look at a page on how to block e-mail :
http://www.nepean.uws.edu.au/users/david/pe/blockmail.html

Also how to stop your mail server from being a Spam Relay :
http://maps.vix.com/tsi/

Sendmail patch that permits filtering by envelope sender and recipient
as well as by Received: lines, header recipient (To: friends@public..)
and enables refusing of relaying _before_ transmission of the message:
ftp://ftp.hiss.org/pub/sendmail/

Ask your admin to add the following to their sendmail.cf. This will
reject all mail that continues to come in from domains that only send
out spam. This is a group effort from many admins :
Modify your sendmail.cf in the following way.
1. Setup a hash table with the domains you wish to block:
Bad domains (spam kings)
FK/etc/mailspamdomains

2. Add the following rules to S98 (be sure that there are three lines
(i.e. the lines are not split up) and be sure to put a TAB character
between the $* and the $#error, not a space) :
Spam blockage
R$* < @$*$=K . > $* $#error $@ 5.1.3 $: "Your domain has been
blocked due to spam problems. Contact your administrator."
R$* < @$*$=K > $* $#error $@ 5.1.3 $: "Your domain has been blocked
due to spam problems. Contact your administrator."

3. Make your hash table. Here is a very small example :
moneyworld.com
globalfn.com

Mail that comes in from any of these domains will be returned to
sender with the error. If the sender is bogus, it will bother the
postmaster at the bad domain in an appropriate manner.

Keep in mind that *ALL* email from these domains will be blocked.
This is really only a good solution for domains that are setup by
spammers for spamming. Blocking something like aol.com, although it
may seem initially attractive, would cause problems for legitimate

users of email in that domain. Compile your list after careful verification that these domains fit the above description.

Misc.
==========
Origins of Spam
==========
The history of calling inappropriate postings in great numbers "Spam" is from a Monty Python skit (yes, it is very silly... see http://www.ironworks.com/comedy/python/spam.htm) where a couple go into a restaurant, and the wife tries to get something other than Spam. In the background are a bunch of Vikings that sing the praises of Spam. Pretty soon the only thing you can hear in the skit is the word "Spam". That same idea would happen to the Internet if large scale inappropriate postings were allowed. You couldn't pick the real postings out from the Spam. See: http://www.geocities.com/~hkentcraig/HowInternetSpamGotItsName.html

Geek cartoons, some anti-spam cartoons mixed in:
http://www.userfriendly.org/cartoons/archives/

To join a discussion list for Spams, send a message to
listserv@internet.com
In the body of the message type :
subscribe spamad your_name your_affiliation

Or a real mailing list for the discussion on spamming and about what is and/or isn't possible in dealing with this problem. If you would like to join the mailing list send mail to majordomo@psc.edu with the following message in the body :
subscribe spam-list [preferred address]

Black listed Internet Advertisers :
http://math-www.uni-paderborn.de/~axel/BL/ (Europe)

Oldmilk tells us the alt.spam Commandments :
1) Thou shalt not post binaries to a non binary group.
2) Thou shalt not post "sPaM this l00zer" to alt.spam
3) Thou shalt not post to inform us for the thousandth time that this group was started to discuss the fine spiced ham product from Hormel.
4) Thou shalt not spam this newsgroup.
5) Thou shalt not post on a topic that has nothing to do with spam fighting.
6) Thou shalt not harass any regular poster here, lest your ass be spanked to rosy hue.
7) Thou shalt not attempt to make any straw man arguments that spam is good.
8) Thou shalt read the newsgroup before posting.

First off, the only CORRECT way to "SPAM" the net :
http://www.spam.com/
http://www.spam.com/fc.htm - SPAM Fan Club

http://www.spam.com/ci/ci_in.htm - Spam, SPAM and the Internet ...
Use "Spam" when referring to Internet Unsolicited E-Mail, ONLY use
"SPAM" (all CAPS) when referring to the Hormel Product.
Show SPAM Gifts http://coyote.co.net/spamgift/
Or for the free SPAM recipe Book ($1.00 postage and handling) :
SPAM recipe Book, P.O. Box 5000, Austin, MN 55912
Or for SPAM merchandise and apparel call 1-800-LUV-SPAM

SPAM Sites (the food) / The Church of Spam :
http://pemtropics.mit.edu/~jcho/spam/ - SPAM Haiku
http://www.go2net.com/internet/useless/useless/spam.html
http://www.iconnect.net/home/jstrong/spam.html
http://www.rsi.com/spam/
http://www.rsi.com/spam/spam-recipes.html - SPAM Recipes
http://www.spam69.demon.co.uk/spam.htm
http://www.stampo.com/spam.html

A conversation with a spammer. I was amused. First time I had ever
spoken with one. I also forgot to mention (in our very short
conversation) that his World Wide Web service would be deleted (which
it was) :
Me (7:04 PM): I got your spam. By Monday morning all your
accounts should be canceled. That would be your AT&T account, your
Hotmail account and this AOL account. You are welcome. Bye.
GS711 (7:05 PM): <snip - Expletive Deleted>
Me (7:05 PM): Thank you very much. You should learn how to
advertise correctly on the Internet.
Me (7:06 PM): If you do it correctly than you won't have to run
and hide.
GS711 (7:06 PM): thanks for letting me know who you are
Me (7:06 PM): Who am I? :-) ...
Me (7:06 PM): BTW, all your Spams will be reported by many other
people other than myself ...
(He signed off)

And another exchange with a spammer:
http://x.deja.com/article/607067261

A Spammers Soliloquy. I had to keep this one because it was actually
very creative (unexpected from a spammer) :
http://ddi.digital.net/~gandalf/spammersoliloquy.html

And a final note to spammers (I try not to make too many "personal"
statements in this FAQ ...). It is best not to be such a pain that
the Geeks find an intense interest in you. They are almost certainly
smarter than you, at the very least they are smarter in the ways that
the Internet works. The worst thing for you, however, is that they
usually have no life and can easily make you "their life".

How *did* I get this unsolicited e-mail anyway?
==========
Unfortunately just posting a message to a news group can get

unsolicited e-mail. Some spammers "harvest" e-mail addresses by stripping e-mail return addresses out of messages people post. Try posting to alt.test a few times. You will get not only a few autoresponder messages (that is how it is *supposed* to work) but also a few unsolicited pieces of e-mail. The solution to this is to "mung" your address when you post by adding in extra characters (like "Spam") in your return address. You then put in your signature something like "Remove the word Spam from my e-mail to contact me". See:
http://www.private.org.il/harvest.html - How spammers harvest addresses
http://members.aol.com/emailfaq/mungfaq.html - Address Munging

Another way to get e-mail is to have a World Wide Web page. Some spammers just start a web spider (a piece of software that just traverses World Wide Web pages and collects information) going and collect e-mail that way. To prevent your e-mail from being harvested, you can "mung" your web e-mail.

Yet another way for spammers to verify your address is real is to have multiple unique pages to their site so that when you click on the URL they provide, they know that you (and only you) got that URL. See:
http://cnn.com/2000/TECH/computing/01/14/email.privacy.idg/index.html

Pierre suggests that when putting a mailto URL in a web page, precede and follow it with "%20". When someone clicks on it, it will merely put spaces, which will be ignored, around the address, but when a spammer harvests the address, it will have a %20 in it, which will render it undeliverable.

For additional munging see:
http://www.powerup.com.au/~mfleming/antispam/webmung.html

A suggestion of some nasty little HTML items to have in your WWW page (invisible, of course) are :

<A HREF="mailto:root@[127.0.0.1]">
or if your server allows "server-side includes" (and .shtml) :
<a href="mailto:abuse@<!--#echo var="REMOTE_ADDR"--> ">anti spambot

Also you might include a mail to news gateway like the following so that the Spam is posted to Usenet :

See http://www.sabotage.org/~don/mail2news.html for mail to news gateways.

<A HREF="mailto:news.admin.net-abuse.email@myriad.alias.net">
Or
<A HREF="mailto:news.admin.net-abuse.misc@myriad.alias.net">
Or
<A HREF="mailto:news.admin.net-abuse.usenet@myriad.alias.net">

Note : You should note on your World Wide Web page that these links
should *not* be followed by Lynx users, as they will see them no
matter how you choose not to display them on a graphical interface.
The last few in the below list are particularly not nice as they
execute commands on a UNIX host. Substitute root@[127.0.0.1] with any
of the following :
postmaster abuse root admin postmaster@localhost abuse@localhost
root@localhost admin@localhost postmaster@loopback abuse@loopback
root@loopback admin@loopback
`cat /dev/zero > /tmp/...`@localhost
;cat /dev/zero > /tmp/...;@localhost
`umount /tmp`@localhost
;umount /tmp;@localhost
`halt`@localhost
;halt;@localhost

How To Respond to Spam
==========

Howard reminds us :
Note to all: NEVER followup to a spam. NEVER. Express your
indignation in mail to the poster and/or the
postmaster@offending.site, but NEVER in the newsgroups!

Karen asks:
But what about the newbies who look at a group, see lots of spam and
ads, see NO posts decrying them, and conclude that ads are therefore
OK?

Ran replies :
When it gets bad, you'll usually see some "What can we do about
this?" threads. That's a good place to attach a reply that tells
people why it's bad, and what they can, in fact, do.

Austin Suggests:
At the risk of attracting flames, let me suggest an exception to
Howard's law. A followup is allowed if the following 3 conditions
hold.
1) The offending article is clearly a SCAM (for instance, the
Canada calls with the Seychelles Islands phone # scam)
2) No one else has followed-up with a posting identifying it as a
scam (in other words, no 'Me too' warnings)
3) It is unlikely to be canceled soon, either because it seems to
be below the thresholds, or it is in a local hierarchy that doesn't
get cancels, or Chris Lewis is on vacation in the Seychelles Islands.
If all three conditions are met, a followup that X's out the contact
information , severely trims the contents and identifies the post as a
scam is exempt from Howard's law.
Bill's and Wolfgang's addition :
4) Follow-ups should be cross posted to news.admin.net-abuse.misc
and the groups of the spam, but Followup-To: *MUST* be set to
news.admin.net-abuse.misc *ONLY*
_or_

post a follow-up and *SET* Followup-To: alt.dev.null.
In the first case change
Subject: Important FREE $$$
to
Subject: Spam (was Re: Important FREE $$$)
and include the original Newsgroups and Message-ID line, so the professional despammers will immediately find what you're talking about. Do not post unless you're absolutely sure that you can do all that properly. Also 1) - 3) do apply.

If you see the same article with different Message-IDs in several groups, collect the _complete_ headers of each article and check news.admin.net-abuse.misc if it's already been reported. If not, start a thread with Subject: Spam (was Re: <original Subject>) in news.admin.net-abuse.misc or news.admin.net-abuse.usenet . Include all of the headers and as much of the body of one article as you see fit.

Shalon adds:
One note here: in the soc.subculture.bondage-bdsm group, we have 3 or 4 netcops who *do* follow up each spam message with header, whois, traceroute, and contact address info so that those in the group who do not have the technical skills to determine this can complain. It's an unmoderated sex-related newsgroup which has almost no spam -- so it would appear that the technique works extremely well.

Firewalls and protecting your computer
======================================

If your computer is constantly connected to the Internet (DSL, cable modem, thru a corporate connection) you should have *some* kind of software or hardware that monitors to keep ackers out.

Something I put together about firewalls in general:
http://digital.net/~gandalf/firewall.html

A description of of what a firewall looks for / can tell you is at:
http://www.robertgraham.com/pubs/firewall-seen.html

Review and explanation of firewalls:
http://grc.com/su-firewalls.htm

An example of personal firewall software is:
http://www.zonelabs.com/ - Free for personal use
http://www.finjan.com/ - Surfguard Free for personal use (protects against malicious web pages)
http://www.networkice.com/

The problem with some of these types of software is that they are "technical" when they report an "attack" and the "attack" may or may not be worth noting. Network Ice (Black Ice) seems to work fairly well IMHO, but again you will need to examine each "attack" and see what it really is before complaining to a provider.

Bottom line, if you are constantly connected to the Internet (or even if you dial up for long periods of time) you should either have a firewall in your network, or run software like the above.

Revenge - What to do & not to do
==========

No matter how much we hate Spam and how much we dislike what the spammers to our quiet little corner of the Universe known as the Internet, Spam is not illegal (yet). If you try anything against the spammers, please * do not * put yourself in risk of breaking the law. It only makes them happy if you get in trouble because you were trying to get back at them.

The reason why spammers use "throwaway" accounts is because they know the e-mail account will be deleted. They usually provide either another e-mail address or a name / phone number or postal address so that prospective "customers" can be contacted. Be sure to complain to the postmaster of all e-mail names provided to make sure that this route is inhibited.

There are sites dedicated to revenge like
http://www.spamcentral.tsx.org

You can ask the Attorney General of a state whether or not that business is licensed in that state, and who runs the business. I looked up a business out of Nevada and found :

http://www.naag.org/ - National Association of Attorney Generals

http://www.state.nv.us/ag/ - We welcome any comments or concerns from you regarding Attorney General matters. If you would like a response from this office, please provide your name, address and telephone number, with your electronic inquiry and this office will respond to you by mail.
Write to : aginfo@govmail.state.nv.us

Look the business name / owner up on the WWW for Las Vegas NV :
http://sandgate.co.clark.nv.us:8498/businessLicense/blindex.htm
Which gave me the following info for the spammer "ROAD TO WEALTH INC":
http://sandgate.co.clark.nv.us:8498/servlet/BusinessLicense?instance=blotdetl&license_number=000144-533-3

And see if they are paying the correct taxes:
http://www.state.nv.us/binn/license.htm
Nevada Department of Taxation
555 E. Washington Ave.
Suite 1300
Las Vegas, NV 89101
PH: (702)486-2300
FAX: (702)486-2373

City of Las Vegas
Department of Business Services

P.O. Box 1900
400 Stewart Avenue
Las Vegas, NV 89125
(702)229-6281

Telephoning someone
=====================

Calling someone once is fine. If enough people are irritated at the spammer and they all call the 1-800 number the spammer provides, the spammer will get the idea (sooner or later) that it is costing them more in irate people (and most especially loss of business) and it is not worth it to spam.

Do not dial any phone numbers more than once from your home. Phone harassment is * illegal * and you * can * be prosecuted in court for this. Even tho' the caller id blocking code (may be *67 or *71 or some other code) prevents your number from being displayed on their telephone at home if they have caller ID, *57 will give the phone company the number, *69 will dial back the phone number via automatic call back. If it is a 1-800 number there are two problems. First they can *always* get your phone number, and secondly it may *not* be a toll free number. You may be charged for calling a 1-800 number.

Likewise, do not call collect using 1-800-COLLECT or 1-800-CALL-ATT from home, once again this can be traced.

Austin comments : I would say that calling a listed non-800 number *once* collect to voice a complaint is not harassment, but justified. They sent you a postage due message, didn't they? If they don't want to accept collect calls, they should say so - and if they do, you should be a responsible person and not do it again.

AT&T Information for 1-800 numbers is 1-800-555-1212, but that only helps if you know the company name you are trying to call. Also, you can try searching for a 1-800 number (you do not have to know the company name) at :
http://www.anywho.com/tf.html

Other telephone search mechanisms:
http://expertx.com/Free/xPhone/Locate.htm - Where that phone number is located
http://www.zip2.com/
http://www.bigbook.com/
http://www.switchboard.com/
http://www.555-1212.com/

Snail Mailing someone
=======================

Likewise, one well thought out letter sent to the spammer might help convince the spammer not to do this again. Especially if the spammer was part of a corporation that didn't realize the detrimental effects

of spamming the Internet.

If you decide to deluge the spammers postal address by filling out one or two "bingo" (popcorn) postage paid cards in the technical magazines (by circling a few dozen "product info" requests per card & putting on printed out self sticking labels with the spammers address), or by putting preprinted labels on postage paid cards that come in the mail in the little plastic packages, don't organize a public campaign (that they can point to) against the spammer in the newsgroup.

Scott also reminds us :
Since this is the "Spam FAQ", I'd like to point this out: You're basically Spamming the company offering information in a magazine. It costs companies money, not the one you're spamming. They get a free pile of junk which is easy to throw out. In other words, this may be harming third parties more than the intended target. I'm not trying to be Mr. Nice Guy, just trying to point out an important technicality.

Organizing a campaign against the spammer could lead to the spammer trying to get a cease & desist police order against the organizers. Likewise, FAXes that are inverse pages (black background on white letters) to a spammer could probably give you problems.

1-900, 1-800, 888, 877 and 1-### may be expensive long distance phone calls
==========
http://www.ftc.gov/bcp/conline/pubs/tmarkg/nine.htm - 1-900 explained
http://www.ftc.gov/bcp/conline/pubs/services/cramming.htm - Mysterious Phone charges

Be very careful when dialing a 1-800 or any "toll free" number you are not familiar with. It may end up being a very expensive mistake. Remember to dial these numbers from a phone booth so that your home phone will never be charged. Another reason to call from a pay phone is so that the spammer cannot get your home phone number. Even if you are "Unlisted" when you call a toll free number the spammer gets your phone number.

All 1-800, 888 or 877 numbers are *not* free. You may be charged for the phone call. You can tell if the number charges by calling from a phone booth. If you cannot get through then it charges. See below.

Likewise, numbers that may "look" like they are United States long distance phone numbers may in fact be out of country and may cost you $25 or more for a couple of minutes call. These calls are not refundable. A scam artist trying to get money from the phone calls (he gets a skim off the top) was dialing random beepers with an out of country number.

A phone scam can be read at http://www.scambusters.org/809Scam.html

Some area codes to look for (some may not be active for another year
or two):
(Also see http://www.nanpa.com/number_resource_info/assignments.html)

242 Bahamas
246 Barbados
264 Anguilla
268 Antigua
284 British Virgin Islands
340 U.S. Virgin Islands
345 Cayman Islands
441 Bermuda
473 Grenada
649 Turks and Caicos
664 Monserrat
670 CNMI (Commonwealth of the Northern Mariana Islands?)
671 Guam
758 St. Lucia
767 Dominica
784 St. Vincent and Grenadines
787 Puerto Rico
868 Trinidad and Tobago
869 St. Kitts and Nevis
876 Jamaica

If the ad says "Procall", it is a large service bureau for 1-900
numbers in Arizona. When you call a pay-per-call number, there should
be a recorded intro that will give a customer service number. That
should connect with a live person.

I would like to thank Eileen at the FTC for kindly answering my
questions about 1-900 & 1-800 phone numbers.

Paraphrasing what she e-mailed me :
When a 1-900 number is advertised, the price must also be disclosed
(this may be found at 16 CFR Part 308).

When calling a 1-800 number that charges, there must be an existing
subscription agreement between the buyer and the seller

http://www.ftc.gov/ Federal Trade Commission Home Page

(from the "Online Scams page)

Junk Mail - The Law
==========

http://www.jmls.edu/cyber/index/spam.html - Collection of legal spam
items
http://www.vtwctr.org/casewatch/

http://192.41.4.29/index.html - 'Lectric Law Library
http://spamlaws.com

Kevyn tells us that : In many countries, forgers of headers can be prosecuted. This is the equivalent of forging a postmark and delivering it yourself. When someone sends out spam with forged headers, he or she clearly:
a) knows that what they are doing is wrong, and that they can be punished for it
b) is clearly attempting to evade detection and punishment.

For Norwegians, these pages may be interesting:
http://www.datatilsynet.no/
(Datatilsynet is a government controlled organisation, made to protect people's right to privacy. This page explains that if someone wants to advertise by email or SMS messages, they need prior consent from the victims)
http://odin.dep.no/bfd/norsk/aktuelt/pressem/004051-070038/index-dok000-b-n-a.html

You should also read Title 47 of the United States Code, Section 227. There is a FAQ at cornell.law.edu for the text of the law (gopher or ftp or http://www.law.cornell.edu/uscode/47/227.html), and you can use DejaNews to read the USC 47 thread on news.admin.net-abuse.misc to make up your own mind (it invariably comes up) or you can look at :

http://www.cybernothing.org/docs/code47.5.II.txt

In Washington (State) (for example) fax laws (RCW 80.36.540 - Telefacsimile messages) define "telefacsimile message" in such a way that could be interpreted to include E-mail. It was not originally written to cover E-Mail, but that is for the courts to decide :-). California regulates it thru Section 17538(d) of the Business and Professions Code.

A spammer has actually been prosecuted. See:
http://www.oneworld-design.com/nospam.html

In California (Quoted from http://Spam.abuse.net): Spamming to or from California e-mail service providers against their policy is now a civil offense under California Business and Professions Code Section 17538.45. If you run a California-based e-mail service provider, you need to notify your customers of the law and your anti-spam policy in order to be eligible to collect damages of $50 per message.
Jeff tells us the California Code referring to spam (CA Bus. Prof. Code Sections 17538.4 and 17538.45) may be found through entering "17538" into:
http://www.leginfo.ca.gov/calaw.html (A pretty authoritative source)
That search pointed to:
http://www.leginfo.ca.gov/cgi-bin/waisgate?WAISdocID=705326548+0+0+0&WAISaction=retrieve
Also see:

http://www.netatty.com/spam.html - Sue a California spammer

The Virginia law : http://leg1.state.va.us/000/cod/code51.htm

The Washington State Law : http://www.wa.gov/ago/junkemail/

The Federal Computer Fraud and Abuse Act :
http://www4.law.cornell.edu/uscode/18/1030.html

Additional Resources - Lots Of Links and a *really* good book
==========

The latest & greatest version of the Spam FAQ is found at:
http://ddi.digital.net/~gandalf/spamfaq.html

if it is would you mind landing a good right hook and a left jab for dear old cd????? unknown radio op is out.....

Dayton? I don't like dirty, filthy cities, and if I wanted to be in yankeetown I would buy an Asian made vehicle and move there. I extended an invite to whoever wants to come play in my personal slice of Dixie. I like it here so much I hardly ever leave anymore. Getting ready to kick it 'round here with one of your boyz real soon, but you already know that, of course. Anyway, I think that invite came from the ever credible party that said I was everything from superswangthangman to a gang member to a journalist to a hammie to a doggie beater to a drug dealer to a cb shop to an importer to a trailer dweller and now they are about to expose me with the REAL stuff..so stay close. Oh, I was also reported to a few authorities and an ISP who had to gently remind my church that I was a false idol. Have you read your bible lately, CD?

oh so dayton is a filthy city. didn't know that. so at this ham fest the filthy city will be filled with guys with bad teeth and body oder. gad what a deal.
yes i read the Biblical text, no doubt about it.... yes..... by the way , are you jewish, and were you born near rome, italy???? if the answer to these questions is yes, then n8 and o8 were correctamundo.....at least in this instance.....but it was my understanding that n8 wanted to meet somebody at dayton and duke it out with gloves on.....and i thought you took him up on that offer.....but it would appear that you sir , have attracted a large fan club.....how does it feel to be popular?????? ....unknown radio op is out.....ps..... am i going to have to get back on there and run those assholes off, or are you and tim neboski going to take care of this little pissing contest???? i am getting that froggy feeling again.....,.....uro is out.....again.....chillen on phil hendrie.....

Contrary to what redskirts profess, I regret to inform you that genitals are not people of non-Jewish origin.

N8 correct? Harvest time already?

Cary? Oh, he's still around, only his insults are now akin to the kid like sparks who always got picked last in kickball, sorta effeminate on the playing field, only talks when among his peers sort of ruined-him-for-life kind of thing..He got that overseers ting gwin on and dey know better than everyone. Why, even the ISPs are blind and wrong, eh? Actually, I bribed my way with 3 swine tick hounds and big azzed linears. Long as I got linears, my shoppe, my underworld connections, and Cokie Roberts and Dan Rather buying my stuff (I AM a journalist, remember?) and hog hounds, "CAN'T TOUCH 'DIS!"

He also is scratching the tattoos on my fans foreheads. My name (once it is revealed, of course) with a crooked head and horns, and a certain triple digit number, gazing down upon my flock, will adorn all skin above the eyes. It will be a true masterpiece, as beneath my name, will be the graveyard of yon beakmasters, illuminated only by a minute shimmer, emanating from a single smoldering ember, unable to reignite the masquerade of sparks, but sufficient to comprehend the self-imposed impiety responsible for the dying flame. Will he take cw with that breakah, neighbor?

The church isn't that large. Just the same old tired, poor, broke, and hungry few looking to me as salvation for their wounded and dying egos. How does it feel? Well, I only gave it thought once or twice before. As stated by your soon to be bangin' hood-ear-plugga, no such thing as bad publicity, especially in my world.

Boxing ain't that big here in this part of de swampland. We do have many local bars that have amateur fight night, now that is where it's at. Not what you call gloves, but technically, your hands are covered.

(Sigh) If you must jump in, I guess you must, but they were just getting started. I mean, do you have any clue the amount of money spent on advertising? Let these dogs dig. Nothing but good can come of it. Just don't break a nail.

Trade in the Phil Hendrie for some Howlin' Wolf or Muddy Waters or Coltrane. Trust me. You'll thank me.

Hi all,
I'm looking for info. on an old digi-scan from REDCO
Model #RDS-1
a manual would be great if you have it so I can hook it up
to test
I'm building a receiver and if I recall correctly I can use the digi-scan
for frequency control

I would appreciate any help you can give

> programs.

True. But amateur radios don't have to be "type accepted". An Amateur operator can build his own rig and use it. It's perfectly legal to modify the radio. The action of doing so is not a crime or infraction on FCC regulation. THE USE (the action of using it) on any frequency the operator is not licensed for *>IS<* a violation of FCC regulations. What's so hard to understand about this? The object (the radio) is not covered by any FCC regulation about modifications because it is amateur radio equipment. Amateurs do not have to use type accepted equipment.

Using that radio on 11 Meters is a violation of FCC regulation because the operator is performing the action of keying that radio up. If you persist in thinking that the radio is contraband then you're sorely mistaken. It's an amateur radio, and therefore can be modified in any way. It doesn't key up on it's own folks. Someone has to press the button.

Perhaps you want the option to receive on that frequency, but not transmit. For instance. How about split frequency use! Perfect example for priority board here. Let's say you want to monitor CB frequency (Channel 9 for instance), but have the priority board tuned to 10 Meters so you can listen for a call on 10 Meters.

> use it on 11 meters period.

YES!!! Now you get it! It's THE USE of the radio...

THE radio -> Not illegal
THE USE OF radio on 11Meters -> A violation of FCC regulations.

^^^ See the difference??? Note the words in caps. I don't think I can make
it much clearer than that.

Read example above.

Also worthy of note is that with the chipswitch you can program the upper
and lower band limits and totally ignore 11 Meters.

As far as semantics go, take a look at the subject line of this message.
It's a false statement. And I've given you reasons why one would want to do
this.

>

That's right. TRANSMIT... The action of keying up non type accepted radios
on 11 Meters is a violation of FCC regulations.

Because in order to receive that frequency the side effect is that it will
also key up on that frequency. You just don't key it up.

>

IF the cam caused emissions... Ok, let's make the analogy a little
different.

Let's suppose it's a car that was made before emissions were put into effect
and therefore is grandfathered. Kind of how like the 2510 is exempt from

type acceptance on 10 Meters. Analogy still holds.

>
> Much the same reason that a non type acepted radio cannot be legally

> never transmits. But how many people are REALLY only using it for
> receive?

How many people? Wait a minute, are you suggesting that a tool be
contraband because some people would use it on 11 Meters? Ok... Lets' use
that logic in your paragraph and apply it to similar circumstances.

The operator is GUILTY of using the PERFECTLY LEGAL radio on frequencies
HE/SHE is not supposed to transmit on!

Eeee gads... Let's take that same sentence and use an AXE as the noun in
place of the radio but change the action..

The operator is GUILTY of using the PERFECTLY LEGAL axe on his neighbors car
and got fined for vandalism.

Let's try another one...

The operator is GUILTY of driving a PERFECTLY LEGAL car without a license
and got fined for driving without a license and vandalism for driving across
the park lawn.

An HR2510, AXE, and CAR are perfectly legal items and are not contraband.

Semantics semantics... But I'll tell you what... Semantics are important,
especially in this case here. It's important that people can make a
distinction between the use of, and the item itself. Otherwise you set a
dangerous precedent which is to make any chosen object/tool contraband
because of a possible use.

For instance:

We'd have to contraband matches, lighters, and gas cans because someone could use them to commit arson.

We'd have to contraband knives because someone could get stabbed.

We'd have to contraband guns. (This however is an ammendment to the US Constitution.)

We'd have to contraband any object that any one person might have their health and/or well being jeopardized by. I'll tell you what! Those tree huggers are going to flip their wigs when plants become contraband because someone is allergic to the pollen.

Think the above sounds rediculous? Good. SO DO I!!!! But it's your logic, not mine...

SUMMARY AND CONCLUSION:

1.) HR2510/HR2600/Lincoln -- Perfectly legal equipment. Buy, sell, trade, modify, cherish, etc...

2.) TRANSMITTING said items listed above by a non licensed operator AND/OR on 11 Meters -- This is a violation of FCC Regulations.

BOILED DOWN TO NITTY GRITTY (and put into as few words as possible to accomodate short attention spans.):

OBJECT - Not contraband.

USE OF - Possibly a violation.

Well Landfag, if you ever DO sell any Keyclown shit on this NG you can bet your ass there will be 100 emails to ISP's far and wide complaining about it and citing FCC regs concerning the exact nature of your violation.

However, we KNOW that your game is to PROMOTE illegal CB while pretending to be an upstading citizen concerned about rules.

We were referring to your Keyclown pals...many of whom DO post their illegal crap for sale here in this NG. They will get a little note reminding them that LandFag (you) are responsible for initiating the ISP-reporting Game
:)

>all citezens, ham or not, alike)

Can you point out where, in the CFR, that "anyone" can do that?
The amateur regs (Part 97 of 47CFR) gives amateurs wide latitude
for emergency communications, but nothing is said about that
pertaining to "anyone" and "all citizens."

>on CB that the rest of the citezens don't
>have. Some of these people think, for example, they can use their
>"modified" ham rigs on CB as long as they turn the power down to 4 watts,
>which of course is still illegal.

Can you provide the callsign of any amateur illegally using his
ham gear on CB? Just one will do.

>Nothing in the Amateur service rules extend
>any special privledges to use non-type accepted equipment in other radio
>services such as GMRS, commercial bands, CB or FRS.............., its just as
>illegal for a ham to modify his rig to get on the marine band whilepleasure
>boating or the CB channels, as it is for a CBer to mod his rig to go above or
>below channel 40........

Can you give the callsign of just one ham using his VHF radio illegally
on the marine band?

Without proof of your accusations, you're committing libel against
the entire amateur service.

First off, I didn't read anything in the previous posts about anyone complaining about that to begin with.

But I'll get my trusty PERFECTLY LEGAL axe and have a whack at it. Here goes.

People complain only when it affects them in a negative way. For instance, I don't care what anyone does. It's not something that should concern me, unless it becomes a problem that affects me. So, I really don't give two hoots about what spam some college kid is sending to millions of e-mail addresses in order to afford his tuition. However, if the content disturbs me I will complain about it.

As far as what I "feel" about what other people should do or not do is insignificant. I don't *>think<* people should eat green fuzzy meat... But I can't stop them from doing so. And as long as I don't eat green fuzzy meat it's not a problem for me. Making green fuzzy meat contraband is rediculous.

I don't think people should drop heavy objects on their toes while wearing sandles either. But making sandles contraband and regulating footwear to steel toe isn't an option.

I don't like radishes... But I'm not going to suggest that they should be contraband.

I don't like diet soda, snakes, smog, mousquitos, cheap 3.5" floppies, or VHS, BUT most of all I dislike sticking my nose in other people's business. It's the smell.

[Previous content below removed for brevity and to clear the air..]

I never heard landshark admit/confess to anything of the sort. And as far
as him being concerned... That's up to him. Plenty of people may be just
as "concerned" about the ozone hole. And they probably complain about it.
It's their right to express their opinion on the matter. But as far as
there being a law quashing such discussion, well... No..... 1st ammendment
says that such laws as a "no-no" and cannot be passed.

>
> 2) Why should anyone follow your lead and obey ISP rules but ignore

What does the President have to do with ISPs? Besides, GW's conviction
was a very long time ago, I don't think he is proud of it, and I don't
believe he has said that he might do it again. I don't quite see the
connection....

>> 2) Why should anyone follow your lead and obey ISP rules but ignore

>Their purgative, I really don't care if they follow my lead or not.

That was a loaded question, thank you. But yes, since ISP rules are
not laws, it is a person's "purgative" [sic] if they want to obey or
ignore those rules. It is -not- a person's prerogative to break the
law.

>> 3) Why do you complain about others breaking the rules of their ISP,

Let me get this straight -- now you say it is ok for anybody to break
the rules, legal or not, provided it doesn't offend you?

I did not twist your words one bit, shark. The problem here is that
you are a hypocrite. You have admitted breaking a law that affects
almost everyone in this ng. You yourself have used vile, vulgar,
harassing, and even pornographic styles with the intention of

offending another person. Some of your posts have been written in a "less than civil, orderly manner." You didn't start complaining about such posts until the same type of posts were directed at you. And now you want to be treated with respect?

Sure, shark, I'll treat you will all the respect you deserve.

I believe that anyone can use a ham station for distress traffic
(immediate threat to life or property), but only if normal
communications are not available.

>>on CB that the rest of the citezens don't

No clue, but it would be naive to think that it doesn't happen.

>Without proof of your accusations, you're committing libel against
>the entire amateur service.
>
>KH6O

I doubt it, since he is only talking about "some people", which may not even include hams, and certianly does not include "the entire amateur service."

Well the Motha ship has not taken flight yet, you cannot rush perfection. Im still smooth cruisin doin what I can with what I got. BA, he's still a bad man when he wants to be. I dont compromise audio for output and if I get walked on?, oh well, Motha Nature will give it to me another day a different way.

Umm sparky, the ISP's being notified of the abuse has nothing to do with
what they are saying aout any one individual, it's due to the flooded
posts in general.

Source record: 82202

Thanks for the relay G, for some reason I did not get the reply directly.

1. At no point did I say it was not possible. Hell my Hotpoint Electric Range runs close to 10 kw on single phase circuitry. It is not, however, a varying SSB load. It is a fair bet a certain P3 Orion is capable of 10kw USB DC to Light while mobile; when you have one base in the world, it is necessary to talk to them now and again. Funny what can be done when price is no object.

2. If no one else noted it, 50kw PEP vs 1.5 is something on the order of 15db or about three S units, less than half of what the original posting claimed. Stories tend to grow.

3. Until fairly recently, Reddy Kilowatt would do virtually everything you had in mind -- at a price. Dual services are not that uncommon in this part of the world but you can be assured the usage will be checked by the Pot Patrol these days..

4. All things can be done if enough time and money are spent. But things like monster radios are both more expensive and more time consuming than legend seems to indicate, have a tendency to disappear in their own heat, and have some fairly unpleasant side effects when they work at all. For every one that works, there is almost certainly the wreckage of several dozen more occupying space at the local landfill.

5. I would remind you of the Cathedral Syndrome. If all one is looking at are the ones that stood up they are pretty wonderous. If you realize that it was customary not to hold services in one for a year lest the whole town be lost in the collapse, they are merely remarkable. If you realize that well over 90% fell down on the workers constructing them, they are not a good idea at all.

Now wait a minute, what part of I haven't even had
an antenna for over the past 5 months wasn't
understandable? So how can I "break the law"
EVERYDAY??? And how does' my having transmit
with excessive power effect "everyone on the
newsgroup? Two people here "flood" the newsgroup
everyday, THAT EFFECTS EVERYONE!!

> You yourself have used vile, vulgar,
> harassing, and even pornographic styles with the intention of
> offending another person. Some of your posts have been written in a
> "less than civil, orderly manner." You didn't start complaining about
> such posts until the same type of posts were directed at you. And now
> you want to be treated with respect?
>

On the contrary, I have used colorful metaphor in the body
of the message. Please Sparky, feel free to do a Deja
search, see what you come up with. Maybe two or three
times in the past 7 years, yes seven years, not every day
like you two. Never a subject line with that type of language,
always in the main body of the message.
I have and repeat never posted any sort of pornographic
picture!! So that statement you made there is without fact or merit.

> Sure, shark, I'll treat you will all the respect you deserve.

What ever floats your boat, I don't really care. Report
me to whom ever you please.
I suggest if you want all these "flood" post of offending
types of subject lines to stop, you send the entire
message, including headers to these posting ISP &
the ISP of the poster if different.

You and I share the same passion about rights and freedoms in this country. I (as you apparently do) feel that we should have the choice to have access to the things we need to make our lives better or more enjoyable. With that freedom, comes the RESPONSIBILITY to know when something can be used for purposes not intended or illegal, and to avoid

it. This is all well and good when our society shows proper responsibility and is held accountable for thier (mis)actions.

The problem here is that it seems that a significant percentage of the people feel that communications (and many other)laws should be selectively ignored when it limits them in their pursuit of their favorite activites. This lack of responsibility makes enforcement of the law much more difficult. The FCC and other lawmakers understand that limiting access to devices that could be utilized for unlawful purposes is an effective way of limiting illegal activity. As much as I am a freedom loving American, I have to come to the realization that since much of our society cannot handle the responsibility that comes with our freedoms, that many of them will be taken away as a result. I'm not happy about it. It bothers me that because a few mentally disturbed kids shoot up a few schools, that I may eventually lose the right to carry and own a handgun. But that seems to be the way society is leaning in their attempt to get a handle on what is perceived to be a runaway situation.

Place an "opened up" ham rig on 11 meters, and in the hands of a responsible ham, who only uses it to receive, and there is no problem. But when a great percentage of people choose to not abide by this, then other steps need to be taken to limit access. Making rigs harder to modify, clamping down on the import of "contraband" type radios, and heavy sentences for those convicted of trafficking illegally modified radios are steps aimed at limiting access for those with little social responsibility. For you or I, that may want the freedom to experiment on the ham bands, we may find it a little tougher (like when the FCC clamped down on amplifers that could be used on 11 meters) to modify radios, but this is the price we have to pay because of all the lawless types out there that abuse the privilege for everyone else.

What the illegals and abusers have to understand is that when you're in a "public" arena (like radio) that your actions can affect many other people. Those people also have the right to expect reasonable access to radio services. When this isn't the case, there becomes more pressure on the government to do something to "fix it". When the shit hits the fan and the FCC starts really clamping down, I'm sure their will be many crybabies whining about how "The Man" ruined their fun. But it will be of their own doing. You can either take responsibility for your actions, or have it shoved down your throat. I prefer the former, but many here won't understand until the latter happens. And even then they'll try to deflect that responsibility to something else (The "man", "hams", Their ethneticity, or something else).

Personally I can't wait until this latest generation finally grows up.....

Won't help. Even if the radio is hooked to an external power source,
unless the radio is turned on, the CPU is still draining the lithium
battery. The on/off switch literally disconnects the power source to the
rest of the radio. I had thoughts of running a "keep alive" wire to run
the CPU when the radio was turned off, but decided that changing the
battery once every 5 or 6 years wasn't that much of a problem.

Very true and something that I routinely do with mine (running on dim,
that is)

What answer? I asked why you are concerned about somebody else
breaking rules when you break them yourself, and then you start asking
questions about the president. If I wanted to know something about
Bushski I would send my query to DC.

I said you violate a -law- that affects almost everyone in this ng.
You know, Part 95? CB radio? rec.radio.CB?

> Two people here "flood" the newsgroup
>everyday, THAT EFFECTS EVERYONE!!

Not me, I usually ignore those posts. So do most of the others. They
only bother -you- because now they are about -you-, and -you- are not
everyone.

>> You yourself have used vile, vulgar,
>> harassing, and even pornographic styles with the intention of

I did (Google), and for a while there you were quite profane. And a
lot of your posts promote illegal activity (freebanding), which I'm
willing to bet is against the TOS of -your- ISP.

> Maybe two or three
>times in the past 7 years, yes seven years, not every day
>like you two.

Me two? I use an occasional profane word. I harass illegal operators,
those that promote illegal operation, twistie and moped when they need
it, and a transient troll or two. I have never posted echos. I have
never posted pornography (unless you count that pussy on my webpage).
I have never posted any description of sexual acts (ok, once). So what
do you mean, "like you two"?

> Never a subject line with that type of language,
>always in the main body of the message.

Not that it matters, but there's no difference. Either you read it or
you don't. I didn't look for headers that you wrote, but I did notice
that you didn't have a problem posting on a thread with a profane
header, and you could have changed it if it really was important to
you.

> I have and repeat never posted any sort of pornographic
>picture!! So that statement you made there is without fact or merit.

True. But the vigor of your defense to this one fact leaves your other
arguments weak.

>> Sure, shark, I'll treat you will all the respect you deserve.
>
>What ever floats your boat, I don't really care. Report
>me to whom ever you please.

>the ISP of the poster if different.

If you think that I am violating my TOS then by all means inform my
ISP. But at the same time you should remember your own profane,

harassing posts -- because it sure looks like you can't take very much
of what you dish out to those that offend you.

Well Good Morning Sparky,
I see you want to twists word again, that's fine
go ahead and do what you want.
I repeat, anyone that feels the need to report
me to my ISP, please go ahead. I will report
every "flood" post, vile, vulgar, off topic, harassing
subject line post that I see, and suggest again that
anyone else that cares should do the same thing.
It seems that Sparky is just like an outlaw CB'r,
he doesn't mind these people breaking the "rules"
of their TOS, and as such doesn't turn them in
because he agrees with them, even though they
are breaking the "rules". Now that's what I call a
HYPOCRITE!.

The Landshark
A day without riding a Buell,
is like a day without Sunshine.

I don't have a clue what either a DX 500 or 1600 is but backing off the 520 is no trick at all either carrier or SSB. A 520 should be able to overdrive virtually any amp in existence.

it would drive the 1600 nicely and is a little too much for the 500. try
turning it down to about 50 watts or so.

Most operators that are being talk about dont have allot of money to squander as you mentioned. Were their pocket books falls short there passion makes up for the difference and they do find a way. If one of these high powers stations were sold for amateur or commercial use the price tag would quadruple easy.

As far as juice is concerned, 200 amps service is not a worry. They know that they can produce far more power than they could ever get from the electric company by simply strappin seven 270 amp alternators to a 454 engine and putting it in a shed some where. Not do you just have 1980 amps at your disposal but you got 3 phase to boot!!! You could run a pair of biggest tubes on the market with that kind of juice.

What I just mentioned is not a secret and has been mentioned on the reflector numerous times. I dont advocate doing this at home kiddies,this talk is all hypothetical and is meant for entertainment purposes only. :)

Thanks for the URL. It was an interesting article. Methinks it is not so much folks intentionally wanting to cause problems as it is that a lot of people just aren't aware of anything other than the device they are building or using. It certainly wouldn't make sense to have such heavy regulations that you would need a license for a cellphone, but manufacturers of devices and other users of spectrum certainly need some kind of plan to avoid total chaos.

Thanks again for the pointer to the article. It was most interesting.

Well, the 200 amp service is at 220 volts. What is the voltage of your aforementioned alternators? If the answer is 12, you have 12 volts times less than 2000 amps which is less than 24,000 watts. Any idea of what size wire it takes to carry that current? I've worked with 600 amp bus ducts, and those solid copper bars are NOT small. Oh, and they handle 600 amps ... a lot less than what you're talking. Also, any connections must have virtually zero resistance. 1/100 ohm translates into a 20 volt drop (difficult if you only have 12 volts to begin with). Of course, the alternators may well be higher voltage, I suppose. 24 volts will get you up close to 48,000 watts - assuming zero loss any of the way. This is the reason power companies step the voltages up to 150,000 volts and more for long distance transmission. Too lossy (and too expensive) to try and run high power at low voltages.

73 from Rochester, NY
Jim

I didn't twist anything. You never did directly answer the first question, you backed away from your posts where you admit violating the law, you say that others use profanity daily but you have only used "colorful metaphors" maybe two or three times and that those "colorful metaphors" were ok because you didn't put them in the subject line, you twisted -my- words at least once, you think that any negative post that offends you affects everyone, and you think I am one of two that may be responsible for flooding the ng.

And then, after all that, you call ME a hypocrite?

The alternator output voltage depends on the induced field voltage. You can virtual get out any voltage you want. This intern is fed to the primary side multiple three phase xformer to step up to HV. Getting a conductor to carry the current is elementary, I would be more concerned about getting a big enough heliac and antenna that will hold up corona melt down. Your antenna will start melting from the tips inward. Alternators are also inefficient old school, I haven't began to talk about fuels cells. You need to understand, people have been there and done that, do you know how powerful a determined idea is? Tesla was playing with hundreds of thousands of watts in the 1900's, please this is the Y2K+, lets get beyond the doubt.

hi jim our resident high power expert has spoken again for the unbelievers.

here it is unedited:

lalalalalala

>
> Well, the 200 amp service is at 220 volts.

Actually, the standard is 240 / 120.

In actual use, it bounces all over the place.

What is the voltage of your
> aforementioned alternators?

Depends on what you order. Most people pull about 18 volts 3phase off them.

However, you spin the alternator higher and higher, and the frequency goes
up,
which causes losses to go down.

If the answer is 12, you have 12 volts times
> less than 2000 amps which is less than 24,000 watts.

Huh?

The alternator puts out in the neighborhood of 200 amps at 18 volts.

Thats 3600 watts per alternator.

Thats for a 165 amp rated alternator

CE Neihoff makes one that I have seen do 800 amps, single stator.

Electrodyne makes a dual stator that will provide near 600 amps of
AC output per stator. That means 1200 amps, at 24volts, each alternator.

Any idea of what size
> wire it takes to carry that current? I've worked with 600 amp bus ducts,
> and those solid copper bars are NOT small.

On all the systems that I have set up, I run 0 gauge wire from the
alternators
to a run of 4/0 gauge that goes to the back.. Compression fittings all the
way around. Thats for DC. For AC, I run (depending on the alternator)
from 0 to 2/0 gauge, for each phase.

You also need to take into account that these are 3 phase, meaning that each
phase will only take 1/3 the current. So, all of a sudden, those 600 amp

alternators are only putting out 200 amps per leg.

Not too hard to carry 200 amps 15 feet, is it?

Oh, and they handle 600 amps ...
> a lot less than what you're talking.

Those are also rated for 600 amps continuous. The duty cycle that the
average CBer
uses is way more along the lines of 25 to 50 percent. You ALSO need to take
into
account that most people running these monster boxes have negative carrier
shift,
and that means that when they talk, they actually pull LESS power than when
they
are just throwing a carrier.

Also, any connections must have
> virtually zero resistance. 1/100 ohm translates into a 20 volt drop
> (difficult if you only have 12 volts to begin with).

lol

Check out http://www.angelfire.com/pa/baconbacon/page2.html

It will show you how to figure out loss for 3 phase power.

Your WAY off base here.

Have a good one Jim.

Strike two.

yes you can get almost anyvoltage you want but as the voltage goes up the current goes down. 270 amp Leece Neville alternators are dc only remove the diodes, run it Ac and it is not a 270 amp ac alt running 3 phase. All your Jive lingo may sound good on the radio but out here in the hood it is mainly bs.

Hi again WebDoc,

>
>It's a nice looking rig I'll give you that, but is it type accepted for
>cb? If not I don't want it!
>

Yes, it is type accepted for Class D Citizen's Band service. Some may try to mislead you re. the modifiability of the radio, however, they do not present the facts.

Galaxy is but one moniker that uses RCI main circuit boards, specifically the EPT-69xx series. Other brands utilizing RCI manufactured boards include Ranger, Texas Ranger, RCI themselves, Pryme, and Cobra. What!...did I say Cobra? Yes, when Cobra ceased to employ Uniden, they turned to RCI. Speaking of Uniden, they are probably the most legendary modifiable CB board in 11 meter history. The Cobra 148GTL & 2000GTL were famously modifiable. My Yaesu and Alinco gear is all modifiable.

The bottom line here is "personal resposibility." It's not the gear that depresses the P.T.T., it's the user. The Galaxy DX2547 s a really nice 40 channel 12 watt rig. I personally use a unmodified Uniden Grant XL.. (also very modifiable) I hope this helps you with your decision. Take care and 73.

Mark

P.S. The Uniden Washington is still available here and there, I do like the Galaxy's frequency counter though. (Stricly for aesthetic reasons...lest some twit ask what it's there for.) It reminds me of my old Cobra 2000GTL.Take care and good luck to you.

Oh yeah, I forgot the usual faggot illegal denial that these "DX" amps (made for 11 meters) are going to be used on ham bands by licensed hams.

Well Sparky you show your true colors
again, you really are no better than Doug
and his cohort. YOU are the true
hypocrite in this whole mess. You claim
to be on the righteous path of the good for
the airwaves, but when it comes to "your"
friends breaking the "rules" here, and it's all
about "rules, you say, "it's ok, because they
are doing it to an "illegal"
Nope, sorry, I don't need mommy like you
and the others, you can continue slinging, but
all it's doing is ruining any credibility you had
on this group.
I have admitted to doing illegal radio's ops in
the past, and said in the future I might again, but
that doesn't make me wrong in the time being.
Flooding is against ISP's TOS, Harassing is
against ISP's TOS, Vile, Vulgar, Offending
posts are against ISP's TOS, and they will be
reported. On the other hand if you want, please
forward my admittance to the FCC, and see what
comes of it..... Nothing, because they
have to catch you in the act, considering that I
don't even own a mobile or base antenna, that will
be a laugh.

>
> Sorry for the post. I'm just checking something...

Ah yes. That was me posting the "A Tester" message. I was trying
to figure out if that is where your "friend" is posting his messages
from. The answer seems to be yes.

It's a free mail and newsgroup service which can be found at
www.ynnmail.com.

Looking at the headers of the message I posted from there, I see:

X-User-Info: 206.139.252.3 206.139.252.3
NNTP-Posting-Host: 206.53.132.39
Message-ID: <3b044807$1@news2.mibx.net>
Date: 17 May 2001 22:52:07 GMT
X-Trace: 17 May 2001 22:52:07 GMT, 206.53.132.39

The IP in the X-User-Info: is the real IP of my computer. The
NNTP-Posting-Host: has nothing to do with me, it's probably the address of
the dnews web server that the ynnmail.com site uses for doing news.

So, to compain about the posts, you can try sending e-mail to the guys
at ynnmail.com. From their web site:

YNNmail contact information:

Technical Support Email Address : support@ynnmail.com

Technical Support phone number : (408) 350-8011

Business fax number : (408) 792-0909

To figure out who the guy doing the posts are, try tracking down the IP
address in the X-User-Info: header and see where that leads you...

No big thing; he IS the electric company. Incidentally the alternators down at your local Reddy Kilowatt station do not run a particularly high voltage. Three-phase is popular simply because it takes up the stator space single-phase would not so it is mechanically more efficient on both ends. There is no particular magic in it other than to make the rectifier bank cheaper and raise the frequency of the output to the filter in rf applications. It also gives the grid a more balanced load on the three phases which is of interest in transmission line losses and transformers.

I would personally use a 400 inch diesel rather than a dump truck engine but WTH. Hells Bells, steal a locomotive. On Sunday mornings I get to watch great shitpots of Wyoming coal heading for Detroit Edison and Commonwealth Edison hauled by two UP units. Put one of those beasts powering your 75 meter linear. Wonder if those moose Fairbanks Morse units were pulled when they sold the missle sites? You might still find one of the power units to the old reefers; 3-cylinder diesels producing 208 3-phase.

But again: we get back to the first rule of Aeronautical Engineering. Bricks can be made to fly if the customer has enough time and money.

Dick

I just did that. It leads to an AOL web proxy server. So he's connecting
through AOL and using the www.ynnmail.com account to post those messages.
To trace it beyond that you would need the help of AOL.

And I believe both parties are licensed for the 10 meter ham band in
contrast to some lifer Techs of my acquaintance, the Kenwood 520 is an
ancient and honorable amateur transceiver for SSB, and its conversion to 11
is not the easiest thing in the world to accomplish. The DX series of amps
you know more than I do but the odds are it will work as poorly at 28.350 as
it does at 27.650 or as well.

If you think you are actually accomplishing anything with the campaign, you
owe it to the cause to do a better job of it than that. So far, it has had
all the effect of a Soviet spontaneous demonstration. But then it does beat
passing a code test, doesn't it?

You have this thing with homosexuality which leads one to believe you are
more than likely a closet case yourself. So friggin what? Seems to bother
you a whole lot more than your words bother me.

Hi, Powerhouse! Yes. I remember you. I have always kept a pretty low profile
in the group. I get a big kick of the "Jerry Springer-type" hate and discontent
argruing. But multiple posting makes about as much sense to me as someone
throwing dead carrirers on the CB. At first it pisses you off. Then it just
gets plain old after awhile. On the radio, you just squelch them out, QSY, or
shut the radio off and find something else to do. Since I started using the
bozo filter, it's just like having a giant sqelch knob on my PC.
This is still a great NG. It must just be the eleven year toll-cycle.
When this all dies down, a whole new group of bozos will be there to take their
place. Well gotta go now. I have an appointment with my P-DOC. Seventy-thirds
upon you! _________-_________-

Hi Tim. Well, the original thread started about someone using a 50,000 watt transmitter from his house. This I have a problem with. I am not nitpicking about the service (120/240 single phase). Whether you draw 200 amps on each of two 120 volt loads or 200 amps on one 240 volt load makes absolutely no difference. It totals 48,000 watts maximum available to the input of a power supply. Yup, putting a modulated signal of this size out WILL make the mains vary one whale of a lot. This is exactly what happened to a friend of mine back in the early 70s. He was warned of two investigations - one by the FCC and the other by the local utility company. The fruit cellar (transmitter) was capable of about 20,000 watts pep output. It did cause problems with the primary power regulation. Seems when he spoke, lights dimmed in a couple of other houses (most likely on the same pole pig). As far as the three phase, sure. This makes things a lot easier. Not only does the draw on each leg drop, you get a far cleaner DC signal with less filtering (could you even filter a single phase full wave rectified circuit at this kind of current?). Compression fittings are absolutely necessary - my mentioning of resistance applies specifically to the nuts on the lugs of connections. I should have noted the 3-phase mentioned. It DOES make a difference - a BIG difference. All in all, I might tend to believe this high power operation off of an external combustion engine driving a bunch of alternators more than I would believe that kind of power from the house. I'd love to see how they mount all of the alternators, though. I'm not saying it is impossible, just that it would be rarely - if ever - done. All of that aside, either you've got to combine a LOT of transistors and actually get them to work, or you have to go through a step up transformer (and a step down) for the voltages for a BIG tube. In any case, I remember that 20 KVA transformer - pretty hefty. Oh - and rated 50-60 Hz. I'm not saying it is impossible, I simply look at the difference between 100 watts and 1000 watts. Easy, a bit of money. On to 5000 watts. Not as easy, more money. 10,000 watts. Hmmm ... starting to run into problems. At 20,000 watts, my friend was running into trouble with the local utility. He also tryed to outshout a guy on 40 meters and about a whole foot of RG-11 coax disappeared in a big ball of fire (also killing the main breaker). Never did find the missing foot of RG-11. He was running into big time problems at the 20,000 watt level. How do you feed 40,000 watts to the antenna? I'm not saying you can't - I am saying that while I may live in Rochester, NY, I think my heart may lie in Missouri.

73 from Rochester, NY
Jim

ps - yes, I have worked with polyphase current
pps - no, I would not care to be within several hundred feet of such a transmitter in operation. Think about it the next time you use your

microwave.

No it's closer to 30 Mhz wide although it is assigned a 6 MHz channel in the US (more than that in Europe, 8 I believe). Similar situation with the digital replacements for AM and FM broadcast. It's resistance to multi-path is so poor, there has been a revival of some ghost-buster circuitry used in Japan but not imported because it would also decode the earlier forms of cable encryption.

Eventually all TV in the US will be between the present Channels 22 and 50. And the ITU allocations are not that detailed.

Troll, troll, troll your boat.

jim, like toll said he had a 300 amp drop into his house and you can get bigger or multi 200 amp lines no problem as long as you can afford them. i'll try to dig up some pictures of some high powereed base instals but for now click these three links here and youll see how all the alternators are mounted. this is not rare like you think jim. tune any radio you have to 27.025 26.835 or any other freq and listen to the high powered mobiles with huge alternator systems and then there are the bases that will still wipe them clean

http://www.geocities.com/timnebo/backviewgoosemotor.art

http://www.geocities.com/timnebo/backviewgoosemotor.art

http://www.geocities.com/timnebo/sideviewpulley.art

maybe not all of them have 8 but there are lots and lots running more than one just for high powered radio purposes

If an amp will work out of the box between 24 and 35 MHZ, it is
ILLEGAL.

If an amp will work out of the box on these frequencies with less than 50
watts drive power, it is ILLEGAL.

I am amazed at all the bullshit of "it is legal when this and legal when
that". All it is is a bunch of crap thrown up by idiots who know better,
but can't stand to be branded as the criminals they are.

That sounds pretty fishy. RG-11 is good for a max of 1700 watts at 30
mHz, so why would he even attempt to push 20 KW through it at 7 mHz?

Running this kind of power is going to take large hard line. I tend to
think most of these stories are urban legends as this kind of power can
eat up antennas with corona discharge real quick unless you are using
antennas designed to handle such power.

Supposedly the quad antenna was invented at HCJB for exactly that reason.
The chief engineer enjoyed reading his paper by the corona at nite but
really hated to replace elements on a yagi.

The man in question would not be the first or last to do something silly
like forget the RG-11.
Twenty kw at 75 ohms produces about 16 amps (W=I**2 Z) of rf.

While one can find now and again a successful effort, you do not see the
other 99% that failed miserably. Not impossible, merely improbable.

Just to clear up a little point. The maximum power input to the PLATE circuit was 1,000 watts. If the configuration was a grounded grid amp, then the input power to the driver stage had to be added to that since that RF power also appears in the output. Filaments, receivers, lights, and whatever else had nothing to do with it.

You are correct. He seldom really pushed the thing. When he did, it blew the line. I have seen it in operation. It was built in the open in a fruit cellar and a girlfriend of his (who was a ceramics teacher) built the chimney for the tube. The tube was a pull from WHAM, a clear channel 50 KW station located in this area. He used it, but usually at much lower outputs. You mention the power capability of the coax - well, that's why a foot of coax disappeared! I gingerly entered the fruit cellar and looked at the plate current. As I recall, the thing idled at 300 ma at 3000 volts. No, I kept my hands in my pockets! The mercury vapor rectifiers did glow most impressivly.

What these select few get bent out of shape over is the fact they can do
absolutely nothing about the export radios,

It seems of late that the ARRL has the ear of the new head of the FCC,
and the talk

"And how long do you think this talk will take to actually materialize
into action?"

is about clamping down on the so-called "export radio" and the
intrusions in to the 12m and 10m Ham bands.

"Great. I have always said stay out of the hammie bands."

so they do the next best
thing that feeds their egos and that is attack those whose viewpoints
may differ from their own.
Sounds just like you Twisted.

"If you want to debate a topic, fine. If you want to lie and get
personal, talk to your smut pal. You just hold a grudge."

have not learned the basic rules of supply and demand,
I think many CBers are going to get a rude education in that department.

"Nothing rude about it. Cbers will adapt and roll with it. Always, have,
always will."

especially where radios/electronics are concerned.
Well just look at scanners now days. It is getting really hard to find a
scanner that can pick up cell phone calls because the new designs

"No? I beg to differ. CERTAIN ones can not be modified......YET. Exports
are easier than ever to get. My AR is only three years old and is all
mode coverage 500 kHz-1900 MHz. Another model offers 10 kHz to 2.6 GHz."

can't even be modified to do it any more. As a second example Radio
Shack's cheap 10m mobile can't be modified like the older one to go out
of band. What I find really humorous here Twisted is you talking about
electronics, where you have admitted you're lucky if you know how to
solder a plug on to the end of a mic cable.

"Actually, with the help of a few here, I have managed to change and
wire a few mics, learn my way around some entry-level mods, and swap
some crystals in an old mobile for another project I did just to see if
I could. What does guts and workings have to do with what was being

discused anyway? Oh...., nothing. You just wanted to be hateful."

I would surmise a point was to be made if the ones who cried the loudest complained about
What you really mean by "surmise" is it is just "a wild a** guess with nothing to support it" point.

"You could have powder burns on your hand and you would want a video of you pulling the trigger before you could convince yourself you were guilty."

Of course I wouldn't have expected you to say anything different. It would be out of character with your past postings because everybody knows you're never wrong, right? 8->>
--

"Nah. Since you feel the need to speak for "everyone" once again, let me correct you as usual. What every one knows, is that I exposed you for forging and you haven't got over it yet."

: <Does the rig compute the SWR or get it more directly?>
: All I see is one bar coming up on the indicator like it has a proper
: match. Is that what you were asking?
: The SWR's that I listed before were off a BIRD meter.
: M:)

No.

Since you state that the SWR is fine - according to the Bird meter, there is a problem in the rig. The question was to help determine what might be the cause. If the SWR is computed, then the CPU in the rig could be faulty. If the SWR is obtained through an analog circuit, then that could be the problem.

I forgot to ask if the SWR bar indicator stayed completely lit, or is it just one or two segments.

Another possibility, if it is just one or two segments, is that the indication is proper for the amount of SWR you have - but there is something wrong when the indicator switches over to signal strength (or whatever else it is used for on receive).

Something tells us that if your pirate pals started calling CQ on 28.000
USB you'd be the first one there to join them.

>
>so they do the next best

2038. Wilson 1000 good antenna did some nice skip also (review)

Newsgroup: rec.radio.cb
Date: 2001-05-18 05:00:29 UTC
From: John Dobbs <jdobbs2001@yahoo.com>
Message-ID: <x%1N6.2994$i8.2626434@newsrump.sjc.telocity.net>
Source record: 82389

I tryed an experiment and Im now using my wilson 1000 as my home base antenna basically I have a aluminium roof for my porch in the back yard its about 12 feet high and I have the antenna on top I tuned it down and get 1.2 SWR on channel 1 and 40 and in the middle the SWR meter does not move much I get contact 9 miles away 3 S points on the guys meter running 9watts only. when I switch to a stock antenna I only get 1 S point. now thats a nice difference. good antenna makes a nice quick base antenna. I also made contact to Nova Scotia Canada during the day SSB on 27.555 (stock 30 Watt PEP USB) so shooting skip is still possible without needing super directionals.

So one out of 700,000 is about 0.0001% of the ham population. But even if it were 1000 hams out of the 700,000, that would still only be about 0.1% -- one-tenth of a percent. That doesn't fall in the category of "much," or "many." It's almost insignificant.

>According to the FCC, much of the carrier throwing, music etc that
>appears on the CB bands is due to Hams.

Reference please. And is "much" your word or theirs? What percent of a quantity would you use the word "much," Bill? Say 25% ? That would mean the FCC (or you) believes that about 175,000 hams are QRMing 11m. Or would say that the use of "much" would mean, say, 10% ? That itself would imply that 70,000 hams are federal law-breakers. So is "much" your word choice or the FCC's, Bill?

If you are an extra and I am a CBer, why do you need me to quote you
regs? I "believe" that my previous statement came pretty darn close to
the meaning of 97.403, but in case I picked the wrong one, you might
want to check the other emergency rules pertaining to ham radio, which
are found at 97.401 through 97.407.

Close enough?

Capn, DeNILE is not a river in Egypt. Quit reading your text books and start trying practical application. Amprage loss is not inversley proprtional to voltage rise. You have little amprage drop but not to the degree that you describe. We are talking 3 phase. One 3cx3000 with one hi output Leece at approx 4000 RPM will slap a Bird RMS meter with a 10K slug in the corner. Now multiply that by 7 or even 9 alternators and a couple of big tubes.

Mark,

I think this may have been a troll post. I took a look at the radio,
it appears to be an exceptional base unit...and perfectly legal. Heck,
I may even pick one up myself. I think it'd make a fine addition to
the shack. As for the mod-ability issue, like I said, I think you got
trolled. I'm not into all that IP address stuff but I wouldn't be
surprised if this thread contained only four posters, myself included.
Your points re. the different makes and models of radios containing
the same boards is well taken. I've seen this firsthand, my very first
"serious" 11 meter rig had a board that was surprisingly similar to my
pal's Cobra 148GTL. So similar, in fact, that the manufacturer and
model number on the boards were identical...Hmmm? I know you were just
trying to be helpful, just watch out for the troll bait.

Hi,

Can someone please explain all this header/IP address stuff to me. I see alot of references to "check the header, IP address, etc."...but what does it all mean. I took a good look at the stuff posted below but it looks like gobble-de-gook. Can it actually help get these crazy multiple posts of the NG. Not trying to be funny or sarcastic, just really curious. Thanks for the info.

If your a licensed amateur, can you build your own 10 meter capable
linear amplifier? Secondly, can you go out and buy a Texas Star
amplifier (which is marketed as a CW transmitter before a user mod is
applied) and legally use it on 10 meters? I've been off the NG for
awhile and now that a friend is letting me use his computer, I'll be
asking many more questions. No flames please, just trying to learn the
ropes. Thanks.

> peace.

^^^ Note the use of the insults... But he is improving. At least there is no profanity in this rebuttle.

Sparky... Ever jay walk? Ever correct the cashier when the change is more than you should get? Have you ever spit on the sidewalk? Ridden a bicycle without a helmet?

Your question about "Why should he care if this, and he does that..." It all comes down to the individual and what really bothers them enough to complain about. You're question is irrelivent because if you put the logic onto something else it sounds equally rediculous. You can apply the logic to just about any "law"
Why do you complain about people driving 150MPH when you exceed the speed limit by 5MPH to pass?

Why do you complain about shoplifters at the store, when you yourself got more change from the cashier than you were entitled?

Why do you complain about people spitting on your sidewalk, but you spit on others?

See... It doesn't really deserve a response, does it? It's freakin rediculous to ask in the first place.

So, what you're saying is that the laws should be enforced! EXACTLY!
Outlawing a radio because people are not honoring FCC regulations would be
analogous to outlawing baseball bats because they're used in gang wars.

>

> situation.

It's a runaway situation because the laws in place are not enforced. Here's how it works folks... Pass hundreds of laws, then after they "don't work" because they're not enforced just tell everyone, "Well, ok... We'll have to ban them....." You can't judge a politician by what they say, but rather by what they do.

>

I don't agree with you there. Write your congressman and tell them the FCC needs funding in order to enforce these regulations. All it would take is one major bust in every 3 counties and the band would clear up really quick. I figure 2 FCC crews per state should be able to clean this up within one year.

It's really simple... Your "solution" to the "problem" is to simply address the "symptoms". It doesn't work for the following reason: People will (and do!) make illegal amplifiers from components. You still haven't addressed the problem directly and therefore you're just making it more enticing because they'll still get away with using home-brew amplifiers, etc... Which I may add generally cause more interference than the properly engineered units.

>
> What the illegals and abusers have to understand is that when you're in

Expecting people to be curteous and nice and responsible for their actions
isn't something that you can expect. HOWEVER! When someone does, give them
the respect they deserve. But then again, feel free to have some fun...
Fart in an elevator every once in a while and let out a little chuckle.
You're totally anonymous. And farting isn't against any federal regulations
as far as I know! So next time you pass gas, just remind those liberal
environmentalist whackos that you just expanded the ozone hole a little
more. Shake their tree and make them nervous.

>
> Personally I can't wait until this latest generation finally grows
> up.......

Yep... It's going to be interesting. At that point in time though an
increase in social security will only be the "super size" upgrade to the
senior "value meal". I just hope by that time the orange juice is still
made from oranges and not by DuPont or Ortho I don't think their mayonaise
has any links to the food-chain already, but it still looks like
mayo..........

And the Wright Brothers had a monopoly on airplanes for a while too.
Alexander Graham Bell had a monopoly on telephones for a while, and yep...
Even the caveman who made the very first and only wheel.

Geee... Wonder why..... Could it have been that things have to be
invented at some time, and therefore are truly unique and therefore have no
competition (yet)?

Fact is that Mosaic was out before Netscape. Therefore Mosaic had a
"monopoly" because at one point in time it was the first and only web
browser available.

Great satan Microsoft... Well, I'm not going to call Bill evil, but his
business tactics leave something to be desired. OpenSource is the way to
go...

Woops... I hit send before I was done! Sorry for the double post...

Yeah... I'd say having to use a slug for an AM broadcast station
constitutes excessive power... No reason to run that much power at all.
It'd be like bringing a bullhorn to a library. You just don't do that sort
of stuff. No reason to.

Why don't you do the same Twistie. What does your post have to do with Cb radio? 2 wrongs dont make a right, practice what you preach.
Like Steve Case a multi billionare cares about a cb radio usenet. Dont hold your breath waiting for a reply from him. Remember 2 antennas are better than 1

I bet she's talking on a Tram D-201-A. I love Trams. I even sold my TR-27A to radio walt on ebay awhile back. I try to stay with AMERICAN made equipment! The D-201-A's were assembled in Mexico. The D-300 (washington/ madison knock-off) was not of this great nation! Yet these radio's command the most $$$!!. I'd tell myself to go figue, but I don't know how?!

Keep your head down toward the ball, shoulder
square towards the area you're aiming for, that
might help. If not try a set of Pings or Taylor
made.

Hi, 'ol timey! Yes. Those guys kicked ass out here and so do you! I think it's way cool, the way you get to the point and catagorize each person. I would be honored if you could put me in one of those catagories or even create a special one just for me. I know that I fit in the " nut case " catagory. I am an old time cb'er, but am also a ham. My shack is loaded with tons every conceivable piece of "ILLEGAL CB EQUIPMENT" you can imagine! My nieghbor turned me into the FCC for tearing up their new telephone. The fcc tried to blow smoke up my ass about needing a CB radio license. I gave them the list of all my CB equipment that I plan to convert to ten meter use. I told them that my pair of 572-B's linear wasn't enough power and that I plan to upgrade to the full legal limit! The FCC basically told me good luck and case closed!

I already know that I'm nuts and have sought help for my problems. I think that you could label me an advanced class key-clown, or the ham from hell. About a week ago, I posted the letter I sent the FCC & the one they sent back to me in this news group.I forgot what subject I was replying to Anyway, I really enjoyed your post and I appreciate you responding to mine. Thanks & 73. Bob.

For sale.
President Lincoln 10/11 meter mobile radio.
This radio was working great then it stopped transmitting.
It still receives just fine, but I believe the volume or speaker is going out.
It will have sound for a while then it will quit.
I push the PA button in & out and the sound comes back.
Might be something simple to fix.
I replaced the unit with an HR 2600 and would like to offer this unit to
someone who could use it.
Features include...CW/AM/USB/LSB/FM, SWR meter, RF power,
Auto squelch, Mic. Gain, Loc/Dx, Dim, Scan, Span, Roger beep,
F. lock, Frequency range 26.000--29.999 MHz.
Unit is in good shape with normal wear, there is a couple spots on top
where I had velcro. I used the microphone, mounting bracket
and speaker plug for the 2600 application, so these item will not be included
with this radio.Please take a look at the photo attached to get a better idea.
I will take $90.00 (includes shipping Via US Postal, shipped in the USA only.)
I do not have a owner/operator manual. Power cord is included.
If you are intereted, please contact me direct.
I will try to answer any questions in a timely manner.
Thank you...

It sent it through a site that decodes all the crap in the message header.. Below is only a portion of the process it went through to decipher where the message originated. The only thing you have to pay attention to is where it tells you to send the complaint.... abuse@globalcenter.net If they get enough complaints, the individual will loose his account with them. After such, no more flooding of the newsgroup until he finds somewhere else to post from... Then the annoying cycle starts all over again..

Sorry about that, but profanity is not part of my regular repertoire.
You must be thinking of someone else.

>Sparky... Ever jay walk?

Sure, but I try to avoid it these days.

> Ever correct the cashier when the change is more
>than you should get?

Yes, as a matter of fact I did just that yesterday. If you freqent the
same store for many years it is a good idea to develop an honest
relationship.

> Have you ever spit on the sidewalk?

Yep, although spitting is not one of my vices.

> Ridden a bicycle
>without a helmet?

Back when I could ride a bike, helmets were not required. But I did
obey the rules of the road.

>Your question about "Why should he care if this, and he does that..." It
>all comes down to the individual and what really bothers them enough to
>complain about. You're question is irrelivent because if you put the logic
>onto something else it sounds equally rediculous. You can apply the logic
>to just about any "law"

Maybe you don't see what's going on here. Landshark didn't start
whining about all the ng trash and tattling to the ISPs until the
flames were directed at him. That's fine. But now you have an admitted
RF pirate and proponent of radio piracy, someone that obviously
doesn't care about federal laws, preaching about following rules that
don't even apply to him. "Rules for thee but not for me" is his game.

>Why do you complain about people driving 150MPH when you exceed the speed
>limit by 5MPH to pass?

I'm glad you pointed that out, because the severity is important. In
what state will you receive a $17,000 ticket for speeding? Spitting on
the sidewalk? Jaywalking? People fail to see the importance of radio

communication and it's necessary restrictions. It can be a very powerful weapon if used by the wrong people, and can be a very useful tool when used properly. The fact is that there are a whole lot of people and precious little spectrum. Let's put this into perspective by looking a more appropriate analogy:

What would you do if thugs suddenly started chasing the joggers out of your local public park, and throwing kids out of the swimming pools? What if they blocked off the streets in your neighborhood and in front of your house? For their own personal use? That's a fair analogy for radio piracy -- you are way off base when you start comparing it to minor infractions. But what if these same public-resource-pirates said you can't paint your house purple because it offends them and violates your rental agreement? (This is not a rhetorical question.)

Karl, I respect your posts, but don't start defending these yokels. Shark, twistie, or anyone that says that it's ok to steal some spectrum, and then turn around and say it's wrong to disobey the TOS of your ISP, is a Class A hypocrite looking to get out of the flames, nothing more.

Alan,

If you are trying to "learn the ropes" about what is allowed in the Amateur Radio Service you need to pose your question in a ham radio forum - not in rec.radio.cb.

This is not a flame, but your question sounds suspiciously similar to many outlaw CBers queries regarding how to "get away with" purchasing, converting, using 10 meter ham amps on 11 meters.

Source record: 82462

KRS, no need to try and explain ac mobiles to me, Maybe you should read the text books perhaps it will enlighten you a bit , As a matter of fact maybe I will show you my trophy winning AC Mobile so you can learn first hand. A alternator is only capable of "x" amount of power, no matter what tube is used so when you increase the voltage the current must go down, and vice versa. There is no free lunch. You can do the math assume each 240/250 amp ac Leece will do about 10kw, balls to the wall, foot to the floorboard which I know they will do that for a short period of time without the chance of burning up the stator.
For starters you need would need 1 alternator to light the filaments of your ac driver say a 3cx3000 (55amps) and the big box for 1- 3cx15000(160 amps) plus you will need another alternator for the predriver 8 pill, You will need another alternator for your vehicles electrical system and radio etc, power radio, engines electrical system. Now your ready to start hooking the rest up (4) to your power supplys for the Big Box. You act like every alternator is hooked up to the final amplifier, not quite. And it seems from what you are saying is if you run a 270 amp Leece Neville at 15 volts it will do 270 amps, what happens when i increase the voltage to 28 volts, still think it does 270 amps not on your life.

All,

I've got a couple of questions about President HR2600's.

I've seen some listed as President brand, and also Uniden brand. Who makes the radio, and what are the differences (if any)?

And why are they generally listed as export radios?

TIA

On the contrary, I have been complaining about
the multiple post since the beginning. "Everyone's"
I have reported many people that have "flooded"
the newsgroup with spam, so that statement again
is without merit.

>

Complain to the police, city counsel, county supervisors, but
I wouldn't take the law into my own hands and confront
these people face to face.
That's why you and Doug get off on this, you wouldn't, no couldn't face
these people if you had to accuse them to their face. So it is much easier
for you to complain and whine about it here because you don't have to face
them. I on the other hand don't care about what I have done in the past, I
hope that I have learned from my mistakes, but sometimes you don't.
I know, I can't forecast the future but I can tell you one
thing, GO AHEAD AND TURN ME IN, PLEASE, DO

IT!!! To the FCC, CIA, FBI, ISP whoever you have a fancy
with. Because, if your not doing anything at the time of
enforcement, then their is nothing they can do.
I & anyone else that wants to, can turn people into their ISP's for
violating TOS, because they are typing it out , posting it for everyone to
see and as such are subject
to the ISP's TOS, plain & simple.

> Karl, I respect your posts, but don't start defending these yokels.
> Shark, twistie, or anyone that says that it's ok to steal some
> spectrum, and then turn around and say it's wrong to disobey the TOS
> of your ISP, is a Class A hypocrite looking to get out of the flames,
> nothing more.
>
Again, Sparky you are the Class C HYPOCRITE, no
matter what you say. You condone your friends breaking
rules of their ISP, but it's not ok for us to turn them in. You condone them
turning in people for selling "Illegal radio's" but when somebody turns them
in for breaking the TOS of their ISP's, to you that's wrong

HYPOCRITE, that's you.

TTFN>>>>>.....

2096. I sucked 937 peeders on the way to Chi Town

You were loud as hell here early this AM, was in the back seat when I cleaned out your boodie-hole. Got on the head and forgot to bring a condom (one rubber between dweebo and me, what can I say, I'm partial to my dweebo meat!) Going back down on you later on after dinner,I need a good dessert of hot jizz. Same price as this morning. Sound good to you?

No I was not trolling, I am looking for a new Base for the office, and
I want to make sure it is legal, both for my own reasons and for
legality reasons as we do alot of work with/for the government.

Amazing!!!

Just because you get a few flames -- flames that you fanned into
bigger flames -- you fuck it up for all the legitimate people using
the service?

And then you say, "Sorry, but it wasn't my fault". That's the excuse a
small child would make. What's next, shark? Are you going to shut down
the entire newsgroup because you got a little miffed? Are you going to
shut down the CB if someone calls you names? Are you going to shut
down the FCC because you don't like their rules? What are you going to
say then? "Sorry, but he wasn't nice to me."

Landshark, you are a real piece of work!

Bullshit. Even if you -did- call the respective LE and they do little
to solve the problem (as is the case with the FCC), you would do the
same thing anyone else would do and fight back. And rightly so.

> That's why you and Doug get off on this, you wouldn't, no couldn't face
>these people if you had to accuse them to their face.

More bullshit. I have no problem confronting a hypocrite such as
yourself, or any other radio pirate face to face. I have done so many
times, but in almost twenty years only two of these BS artists ever
showed up. Both of them weaseled out.

> So it is much easier
>for you to complain and whine about it here because you don't have to face

Oh no, I called you a name!!! Please don't report me to my ISP!!! Because that would be just terrible and I would have to find another ISP!!! Assuming they would want to lose a steady customer based on the whinings of a crybaby, whose email they could easily block, finding a new service would take about five minutes, so please don't report me!!! Oh, the torment...!!!

Anywayz,

So when do you want to do this face-to-face thing? Or was all that talk of yours about confrontation just a bunch of testo-posturing?

Sadly, in a NG virtually dominated by radio pirates, freebanders and high power keydown enthusiasts, your inquiry will probably not be answered in any realistic fashion.

Yes Bill you're right,
Brian Griffey did the same thing, everyone
including myself we're giving him a hard
time about his amp. No one could say
a thing to his ISP about him, because the
discussions (while heated) we're not
against the ISP's rules. He then posted
some 40 time in a 3 day period for sale
his wonderful Skywave amp, I and many
others reported him to his ISP and "Bingo"
he was yanked.
Now just one person complaining to
an ISP will not ever get you yanked, but
numerous complaints will.
A "Flood" is the same post done more than
a few times, with the same message in the body
and same subject line used.

Did you hear that NONSENCE that George told us the other day that there was NO price fixing or manipulating of the gas prices, that it was supply & demand? I heard another article days ago that said that demand was DOWN. This increase in gas price has nothing to do with demand, they said. But George says it does! We put George in there to get the gas prices DOWN. He sounds like a wimpy GORE to me! Looks like we need to hype up CB for a use it was used for 25 years ago & more---people asking each other where the low gas prices are, instead of the local TV stations telling us that info!!!! Dave!!!!!!!!!!!!!!!

This ng has sunk to new lows with the homophobes blasting their nonsense about certain individuals. Dont they get it that minors read here for tips and pointers and yet they find any avenue to get their venom across? Obviously the 'net minders' of their respecive ISP's could give a crap which leads to more of the same. 6 years of reading posts here only confirms my belief that the American society even with its first amendment rights still doesnt get it. Hate sucks and you in the long run will be the ones picked apart. 73, Jim.

:>FCC announcements. The call sign was listed.
:
:So one out of 700,000 is about 0.0001% of the ham population. But
:even if it were 1000 hams out of the 700,000, that would still
:only be about 0.1% -- one-tenth of a percent. That doesn't fall
:in the category of "much," or "many." It's almost insignificant.

But, that is not what you asked for. You asked for the call sign of
"any amateur illegally using ...". I didn't recall the sign, but
did recall the FCC action notice. You can look it up for yourself.

That fulfilled your request. Quit trying to squirm off the hook.

Further, you failed to address the fact that the FCC feels much of the
intentional interference on the CB bands is due to Hams. You can also
look that up.

I wasn't exaggerating. The claim was made that "You could run a pair of
the biggest tubes on the market ...".

I simply listed a tube where this is not true - and where the power
available would not power the driver that would be needed.

The exaggeration was not on my part.

Hi Anthony,
The Uniden President line of 10 meter radios are, as stated 10 meter amateur radios. The 2510, 2600 and, Lincoln are basically the same radios, except for certain features that each radio has. I have a 2510 and a 2600.
The 2510 is a bare bones rig with a roger beep.
The 2600 has a repeater offset.
The Lincoln (which I don't have the pleasure to own) has variable AM power.
I am not sure of any other features.
Overall they are good on AM and great on SSB.
Hope this helps.

If that's what you think, but I have to live in my neighborhood (I own my
home outright), and I wouldn't even consider "confronting them" over
an issue that could be talked about. If that doesn't
work, well that's why I pay 48 % tax bracket and
I'll let my tax dollars do the work for a while.

> > That's why you and Doug get off on this, you wouldn't, no couldn't

Yes you do, or as with "Illegal" CB operation
you would be on a crusade about violating TOS.

> > but it's not ok for us to turn them in. You condone them
> >turning in people for selling "Illegal radio's"
>
> No, I don't.

Yes you do, I'm sure that a post could be dug up
with you stating that fact. But I really don't have
the time now a days, with all the reporting I'm doing.
remember.

> > but when somebody turns them
> >in for breaking the TOS of their ISP's, to you that's wrong
> >
> >
> >
> > HYPOCRITE, that's you.

Hello & Good Evening Jim,
Yes it has, but things are looking up ;^)
You have the right to report any individual
that has violated his ISP's TOS (Terms Of
Service) If we all band together, we can at least
make them post in an orderly manner.

Hello & Good Evening 137VA,
I have to thank you for not using foul
language, but he does have the right to
at least say that it's illegal to use on the
cb band. Also if somebody was to use
it "illegally", well that is up to the FCC to
"Enforce" not some local, driving around
with a loop antenna looking for your
house. Then park out in front and
start keeping a record of which light went
on, in which room, at what time. It's a
shame that some people just have to much
time on their hands.

>Thank you Doug.............

I suppose that works both ways, doesn't it? If you had stayed on topic
-- CB instead of pirate radio -- you probably would have been ignored.
When the flames started, you chose to fan them. And you know that if
you kick someone off their ISP they will come back on another one. So
I guess the only person at fault here is YOU, shark!

>> >Again, Sparky you are the Class C HYPOCRITE, no
>> >matter what you say. You condone your friends breaking
>> >rules of their ISP,

>>
>> No, I don't.
>
> Yes you do, or as with "Illegal" CB operation
>you would be on a crusade about violating TOS.

You think? Where have I condoned such posts? Since you label this as
my behavioral standard, find at least three posts. You won't find even
one.

>> > but it's not ok for us to turn them in. You condone them
>> >turning in people for selling "Illegal radio's"
>>
>> No, I don't.
>
>Yes you do, I'm sure that a post could be dug up
>with you stating that fact. But I really don't have
>the time now a days, with all the reporting I'm doing.
>remember.

Go for it. Again, you won't find one single post to support your BS.
Have you been talking to twistie? You are starting to sound like him,
saying that something is true just because you say it is.

>> > but when somebody turns them
>> >in for breaking the TOS of their ISP's, to you that's wrong
>> >
>> >
>> >
>> > HYPOCRITE, that's you.

I already purchased the clubs I like(ed) (pings), I am now thinking of
trading them on a set of wooden sticks. My daughter is starting to beat me,
she is 10. That worries me. Maybe I should have stuck with the CB. The way I
play I say FORE a lot, thing is by the time the ball is just about to hit
someone I am just getting done saying teeeean FORE!!!

Come On!!!

Great looking forward to it, I'll be at the Sunny Day Break in Motown
Memorial day weekend. Please bring your trophy. We can set a date to go toe
toe, mobile to my hypothetical mobile ;)

A
> alternator is only capable of "x" amount of power, no matter what tube is
> used so when you increase the voltage the current must go down, and vice
> versa.

Yes amps go down some but not proportionally and if so please show me
analitacal data proving otherwise. You have some amprage loss but the
alternator is putting out approx. 35 AC volts thats not that high yet. Lets
say you just get 150 AC amps, multiply that still by a whole lot of
aternators.

>>>There is no free lunch. You can do the math

Thats the problem, everyone says " oh it cant be done its impossible" when
it being done and has already been proven. For someone who has won AC I
would figure you would know that.

>assume each 240/250 amp
> ac Leece will do about 10kw, balls to the wall, foot to the floorboard
> which I know they will do that for a short period of time without the
chance

Wrong. 270 amps Leece and that is also assuming your using Peter D's 3 phase
xformers. Peter D does not make the most efficient xformers, I know of a
custom made one that will run circles around Dahls and its even a smaller
unit to boot.

> For starters you need would need 1 alternator to light the filaments of

Hello! are we talkin mobiles now? I thought we talkin about a box running
off a engine on a stand? We are talkin 3 phase rectified plate voltage dude,
your filament is being supplied right out the wall. Think in the terms of
purely dedicating all that voltage towards your big tubes plate.

"Jive lingo may sound good on the radio but out here in the hood it is

Could it actually be that like so many of us, Bill is just a ham that got disgusted with the stuck up douche bags on the bands? My ticket expired over 10 years ago and I don't think I would EVER think about getting another! You self righteous pukes can't even get the ham bands cleaned up of over powered equipment on your own bands but think you have the resources to reign in what for lack of a better term is a unregulateable chunk of the airwaves?
I wish you luck!

I just spent 3 nights at the Red Roof Inn in Maumee.
Not exactly my idea of a place with a lot to do.
Train

Why dont you wire a mic. to a din-plug cord?
Required tools:soldering iron,rosin-core solder,#1 phillips-head
screwdriver,multimeter,
wire-stripper and a little patience.
Almost any mic. can be used on almost any radio,the impedance of the
replacement mic.
must be the same or lower than the stock mic.
Open the radio to determine the color code for each pin then take note of
connections
at PTT switch.
Most Uniden microphones have a 500ohm Impedance and make fine replacement
units.

12ft. is only 1/3 of a 11meter wavelength, better results will be obtained
by raising the base
of the antenna to a full wavelength elevation or higher.
The Wilson 1000 is a base-loaded 1/4wave antenna, their is considerable
signal attennuation
due to the fact that the antenna uses a loading coil to make electrically
longer.
If you like DX,n build two 1/2wave center-fed dipoles,one vertically
polarized for sky-wave
propagation and the other horizontally polarized for ground-wave
propagation.
These antennas are easy to build and the only thing you may have to buy is
the coax or a
balun depending on your design and installation.
Good Luck.....

In the US, Barry, there are some rules about linears as a result of illegal use on CB. This is not the place to discuss them but in general, amps do not work out of the box. To whatever extent we give a hoot (200 PEP is perfectly adequate when 10 is open) there are fix kits available, generally requiring showing a license. Not a big deal.

Still illegal. Notice, when you buy a commercially made HF amp, they will supply you with the modification instructions to put it on 10 meters. Look at a QST, CQ, etc and see for yourself.

Sparky lisped:
More bullshit. I have no problem confronting a hypocrite such as
yourself,

"(Chuckle)..sure you do. You are so scared you fantasize that someone
here actually CARES who you are. You fondle yourself daily using the
"who am I" game. You name doesn't mean jack, junior. No one cares. You
are impotent, here as well as on the air. "

or any other radio pirate face to face. I have done so many times,

"Why don't I believe you? Probably because everytime you post here it is
malicious, an attack, or a lie."

but in almost twenty years only two of these BS artists ever showed up.
Both of them weaseled out.
So it is much easier
for you to complain and whine about it here because you don't have to
face them.

"Pot, kettle, black. Dogie complained to Ebay, we complained to his
ISp's about his behavior here. You also lied and complained about mine,
but as you see, I am still here, which makes your allegations of my
misconduct even more hilarious. You wrongly accused so many of so much,
you are now relegated to Dogie status. You only exist when we allow.
You're back out!"

Hey, if you want to do this face to face that's fine with me.

"Last time you made that offer, someone called you on it and you
immediately backed down by crying for someone to pay your way 'cause
you were too poor to afford it yourself. Now run off and lick your
wounds and RF burns from the smoke you have been choking on. Told you
not to touch your radio when I key.
Oh, and if 3 wise men suddenly appeared from the east near your place
and you somehow found yourself growing a full set, come on down. The big
cb bash in O town is right around the corner. I'll show you my amp and
radio collection, whipped dogs, WW I memorabilia, kittens on meathooks
for Blacktips, export businesses, and logs from the starships and
helicopters, and Dogie's own. They have been in a jar hanging around
Cooter Mae's neck since January. Why do you think he is still screaming?
They may be offered as a door prize for the "longest distance traveled
cber to attend." You may have a shot (unless the Big Island is
represented) and can kill two birds with one stone. Now turn that
illegal radio on and have your hypocritical self give me a shout to get
your receive washed again. You know where I am. All replies on hold

'till Monday."

I was on topic, the name of the group is REC.RADIO.CB.
Where does it say REC.RADIO.LEGAL.CB? So with
that, both (I'll spell it out for you here, just in case your
glasses are steaming up) Legal and illegal could be discussed.

Well as for the rest of the crap Sparky, it doesn't matter
to me, you will keep spewing you're innocence about
not causing any of the hate out here, when in fact you
are the biggest wind tunnel out here fanning the flames.

This says it the best:
> >Correct, they do speak for themselves. I have been
> >on this group since it's inception, you, on the other hand

Hey Sparky!! It's easy to not be you, I mean, anyone
could make up a name, come out here with the sole
purpose to fan flames, correct?

Uhmmm.. Wit a minute, a president Lincoln is a 10 meter radio, out of
the box. Now It can be modified for 11 meter use, BUT out of the box
it is a perfectly legal 10 meter radio. So, you're wrong.

Yep. That stands for Citizen's Band, not Criminal Band.

>Where does it say REC.RADIO.LEGAL.CB?

Let's see, the CB is 40 predesignated channels near 27MHz used with no
more than 4 watts A3 and 12 watts A3J. Anything else is necessarily
OFF TOPIC. Where does it say REC.RADIO.ILLEGAL.CB? It doesn't,
although there is an ALT.RADIO.PIRATE. Where in the FCC rules does it
define CB radio as being illegal? It doesn't.

> So with
>that, both (I'll spell it out for you here, just in case your
>glasses are steaming up) Legal and illegal could be discussed.

You missed the boat: Legality defines the CB -- any unauthorized use
of the band is piracy.

Mexican Radio
Stan Ridgeway

I feel a hot wind on my shoulder
and the touch of a world that is older
I turn the switch and check the number
I leave it on when in bed I slumber
I hear the rhythms of the music
I buy the product and never use it
I hear the talking of the dj
Can't understand, just what does he say?

I'm on a Mexican radio
I'm on a Mexican - whoah - radio
I'm on a Mexican radio
I'm on a Mexican - whoah - radio

I dial it in and tune the station
They talk about the U.S. inflation
I understand just a little
No comprende, it's a riddle

I'm on a Mexican radio
I'm on a Mexican - whoah - radio
I'm on a Mexican radio
I'm on a Mexican - whoah - radio

I wish I was in Tiajuana
Eating barbecued iguana
I'd take requests on the telephone
I'm on a wavelength far from home
I feel a hot wind on my shoulder
I dial it in from south of the border I hear the talking of the dj
Can't understand, just what does he say?

I'm on a Mexican radio
I'm on a Mexican - whoah - radio
I'm on a Mexican radio
I'm on a Mexican - whoah - radio

Radio, radio,
Radio, radio...
(what does he say?)

Greetings!

On Fri, 18 May 2001 20:40:30 GMT, while the modem was busy tying up
IRQ's with the Mouse, sparky@cet.com (Sparky) dissertated the
following:

:+> >Sparky... Ever jay walk?
:+>
:+> Sure, but I try to avoid it these days.

In this neck of the woods, if you "Jay-walk" you just might get run
over. Sometimes if they see you move, they try to back up and hit you
again...

:+> > Ever correct the cashier when the change is more
:+> >than you should get?
:+>
:+> Yes, as a matter of fact I did just that yesterday. If you freqent the
:+> same store for many years it is a good idea to develop an honest
:+> relationship.

Due to those bar code readers, I was charged $27,342,11.08 [tax
included] for an overring once...

:+>
:+> > Have you ever spit on the sidewalk?
:+>
:+> Yep, although spitting is not one of my vices.

Around here, spitting is only for those that chew "cud" and are
avoided by other locals. You can get smacked by a passer-by if you do
it in front of someone that gets offended.

:+> > Ridden a bicycle
:+> >without a helmet?
:+>
:+> Back when I could ride a bike, helmets were not required. But I did
:+> obey the rules of the road.

I can show you some grave markers and "little white crosses" from
people that didn't.

:+> [Spelling and grammer check]
:+> Your question is irrealvant because if you put the logic
:+> >onto something else it sounds equally rediculous. You can apply the
:+> >logic to just about any "law"

This occurs everyday, around here - you're considered an idiot if you don't. So, when you apply "law" versus "general consensus" - laws can be enforced in court for stupidity, but in the real world - you have to get hit, caught, or otherwise damaged to have the "laws" applied due to your stupidity.

Note the part about "spitting" above, it's true and fights have occurred over such a simple act of stupidity. A physical confrontation is occurring and the cops usually let the two duke it out and send both to jail.

This is the quandary, we don't need reminding that a law is being broken. Many laws are ignored due to the nature of the events at a given moment that force people to consider the consequences and take their chances.

Let those that take those crazy chances get their own butts in a sling, don't get yourself tangled up with them under harassment as some have.

Misery loves company...

Regards!

Greetings!

Ahemn...

This is an international NG, it's all over the world and if you read a
CB FAQ, you'll find that "CB" is a moniker for a wide range of
different modes, frequencies as well as types of radios and subsequent
regulations for different countries.

Some countries follow FCC guidelines, while others use ITU. Two
different ballgames.

On Sat, 19 May 2001 20:02:12 GMT, while the modem was busy tying up
IRQ's with the Mouse, sparky@cet.com (Sparky) dissertated the

2260. OT: Unusual PUNishment:

Newsgroup: rec.radio.cb
Date: 2001-05-19 21:50:24 UTC
From: "Scott (Unit 69)" <upplus@hotmail.com>
Message-ID: <3B06EAA0.34248876@hotmail.com>
Source record: 82611

Unusual PUNishment:

1. Two vultures board an airplane, each carrying two dead raccoons. The stewardess looks at them and says, "I'm sorry, gentlemen, only one carrion allowed per passenger."

2. Two boll weevils grew up in South Carolina. One went to Hollywood and became a famous actor.
The other stayed behind in the cotton fields and never amounted to much. The second one, naturally, became known as the lesser of two weevils.

3. Two Eskimos sitting in a kayak were chilly, but when they lit a fire in the craft, it sank
proving once again that you can't have your kayak and heat it, too.

4. A three legged dog walks into a saloon in the Old West. He slides up to the bar and announces:
"I'm looking for the man who shot my paw."

5. Did you hear about the Buddhist who refused Novocain during a root canal? He wanted to transcend dental medication.

6. A group of chess enthusiasts checked into a hotel and were standing in the lobby discussing
their recent tournament victories. After about an hour, the manager came out of the office and
asked them to disperse. "But why?" they asked, as they moved off. "Because," he said, "I can't
stand chess nuts boasting in an open foyer."

7. A woman has twins, and gives them up for adoption. One of them goes to a family in Egypt and
is named "Amal." The other goes to a family in Spain; they name him "Juan." Years later, Juan
sends a picture of himself to his birth mother. Upon receiving the picture, she tells her husband
that she wishes she also had a picture of Amal. Her husband responds, "They're twins! If you've
seen Juan, you've seen Amal."

8. These friars were behind on their belfry payments, so they opened up a small florist shop to
raise funds. Since everyone liked to buy flowers from the men of God, a rival florist across
town
thought the competition was unfair. He asked the good fathers to close down, but they would not.
He went back and begged the friars to close. They ignored him. So, the rival florist hired

Hugh
MacTaggart, the roughest and most vicious thug in town to "persuade" them to close. Hugh beat up
the friars and trashed their store, saying he'd be back if they didn't close up shop. Terrified,
they did so, thereby proving that: Hugh, and only Hugh, can prevent florist friars.

9. We all know who Gandhi was, right? He was a spiritual man who fasted regularly. Some may not
realize that fasting, when practiced regularly and for extended periods, leads not only to
weight loss, but can also cause bad breath. No matter, his interests were higher. This great
leader hardly ever wore shoes. One might say he was ... a super-calloused fragile mystic plagued
with halitosis.

10. And finally, there was the person who sent ten different puns to friends, in the hope that
at
least one of the puns would make them laugh. Unfortunately, no pun in ten did.

2261. MUCH WHINING AND BABYISH CRYING FROM ILLEGALS

Pathetic. That's the only word to describe you guys. You are all stirred up cuz someone DARES challenge your supposed rights to defy federal laws and make the CB band miserable for legal CBers.

Your weaselly excuses for breking the law are also MUCHO LAME. Yet we get you to keep making newer and more ridiculous "justifications for being illegal" every day.

Hint: no one is forcing you to read or respond to what we write. But your EGOS won't let you ignore it. You are so used to being "king of the band" with your illegal amps that you can't get a life other than to cry, whine, and desperately argue with us.

So to all KeyClowns everywhere: Thankyou! You entertain us greatly.

??Foothold?? It's a public newsgroup. I'm participating in a discussion about the rediculous notion that an HR2510 is an illegal piece of equipment. Just pointing out the fact that the equipment is perfectly fine and not to be construed as contraband like crack or cocaine is.

A true "TROLL" would not post anything of merit, and make no points in their opinion on the matter. And probably take the discussion into an insult war on a particular person posting a message. Just like you do to Landshark. So, me troll? No...

Check the mirror pal... There's the troll.

I'll make my point as delicately as I can. Here's a snippet from one of your previous posts responding to Landshark.

this scares me, but I am in agreement on this one, the financial
statements for BP shows they have made more money this last quarter than
they did a year ago at this time, and the production levels are down
from a year ago at this time..... so less product = more profit = them
ripping comsumers off.

Many years ago I was coaching middle school football and had my center subjected to a lot of cheap shots. At a break, I installed the Snowplow play designed to leave the nose moose with cleat marks up his chest in a smoldering heap. It worked admirably except that the nose moose had been replaced and we beat up an innocent victim.

So are you. The bozos bugging you here are Codeless Techs who cannot or will not pass a code test and are therefore not licensed for ten meters. This is in fact the biggest reason they are here. You will find that both communities piss on their shoes about equally.

For a man who cannot spell either 'linear' or 'their' you handle the Bard well. You also seem to be under the impression that 10 meters is channelized. Somehow I don't see much danger coming from your direction.

It's is not the CBers that are trashing this group. Multiple post flames, homophobic posts, threats ect. are created mostly by non CBers, ex-CBers or anti CBers. Ignore them. True CBers have more manners.

LOL! So YOUR excuse for trading tips on kilowatt CB amps and 25-32 Mhz 'exports'
is that it ALL for the benefit of some other mysteryious countries?

HAHAHAHAHAHAHAHAHA!!!!!!

THAT'S THE LAMES T EXCUSE YET!

FACT #1. There's specific rec.radio.cb NGs for UK, Italy, Poland, and others.

QUESTION NUMBER 1: What country lets unlicensed citizens operate in the "freeband"
(up to 28 Mhz)?

QUESTION NUMBER 2: What country lets unlicensed citizens operate with more
than 100 watts on 27 Mhz?

THINK, ANDY, THINK.

PONDER.

THE TRUTH WILL DAWN ON YOU SOON.

Thats one of the points L'Shark. Unless a Federal crime is committed then the idiots with an agenda will continue to flame this ng with their rhetoric and their providers will sit on the sidelines until provoked. Sad to say there has not been many banishment's unless you consider what happened to 'the professor' and his spamming of the ng for his 'skywave' amp. 'Oldtimers' will remember this. 73, Jim

WADR, we are all aware of that fact. However, the almost overwhelming
majority of votes are domestic, not foreign. Also note that there are
many CB newsgroups for other countries such as Italy, France, the UK,
etc. And since the general conversation has always been about US CB,
the need to nit-pick the insignificant details of foreign CB is only
used when there is no other redeeming argument available.

There is one other point you totally missed -- when something is
legal, it cannot be illegal. The Citizen's Band is legal, and illegal
radio is OFF TOPIC.

Sorry Dick, but this bozo (me) isn't a ham at all. The code is a
breeze, I learned it from my Uncle listening to the SW as a kid. I
don't know why some people complain about it and others wear it like a
badge of honor. But judging by the enormous pissing contest between
the code-ranks, it is evident that hams behave no different than
CBers, and that makes these petty comparisons moot.

I don't understand the code issue either. I did my 20 over 25 years ago
when code made sense but at about 12 maybe. But the original poster seemed
to be advocating tearing up ten meters in retaliation for the keyclown bit
here. My only point is that even if he succeeded he has the wrong people,
and people who would find our Lifer Tech's antics as repulsive as he does.

In honor of your becoming Kenneth I will adopt a 'handle' as well.

What are you talking about Ken is correct, some of them truckers put out so much RF they stall cars
if they key in the midtown tunnel.
And S-30 signal strength of cursing and screaming about the traffic on the BQE, Cross Bronx and Long Island expressway is normal.
I must say I dont hear truckers or AM above 27.375 except for some Spanish speaking guys calling the Caribbean

I don't know about anyone else but your posts complaining about illegal use don't bother me one bit. I just don't find the point in accusations of a person's sexuality and flooding the NG. I actually find some of your posts rather interesting when you aren't gay bashing and flaming people with some completely senseless posts. I like your posts that have some sort of meaning instead of calling people fags and telling them to get the illegal stuff out of the group. The main thing I haven't liked about your time as the ANTI KEYCLOWN is the flooding. Is just a big nuisance (I don't think I spelled that right). People are going to complain (just like me right now) and ignore you and reguardless of what you say or threaten, they are still going to sell and talk about illegal equipment. In no way am i trying to argue with you and in no way am i for illegal opperation. What happened today kind of brought me out of a stalemate on the issue. I was driving thru my home town, beloit, wi, today and there was a truck driver going thru town and asking for directions on chan. 19. And there were about 2 or 3 locals on channel 19 that wouldn't let him talk. One of the locals said he was going to pump up his 1KW and shut down CH 19. Ultimately the driver never found the directions to where he was going. The locals did not want him or anyone talking on their "business channel" (or so they like to call it) so they shut it down. The trucker was in a panic and really needed to know where he had to go. I don't know if he found directions when he got out of town or if he stopped somewhere or what. They do it quite often...usually every night. This episode just kind of pissed me off just a little bit and got me wanting to study for my ham ticket. I listen to the hams in my area on my scanner and none of them are like this. Granted I will still be a CBer mainly because I have a few friends I talk to on the local channel. Ok sorry about the bitching and venting..just had to get it out a little bit. I'm outta here...have a good one

Exactly, but what can we do about it? I would suggest that we get all of the truckers to block the major highways and cause a major backup. Have you seen that diesel has not gone up very much at all, my quess is that they don't want to piss the truckers off and have them turn the major highways into a parking lot.

later all

That would be the Uniden Washington, and sadly, even this unit is coming to
it's death, as it has been discontinued by Uniden. If you want one, buy it
now before they are gone...

Thanks Brian,

Your experience of listening to the unfortunate trucker and his plight is typical. It happens every day. (BTW, Beloit is where Cong. Ehlers first rec'd complaints of illegal CBers with big amps screwing up entire neighborhoods with RF...leading to HR2346)

A word about the AntiKeyClowns. It has been proven that reason and logic does not work with the hard core "keyclowns". They thumb their noses at polite and civilized discourse. They deny reason. They respond with ignorance, threats and profanity.

Consequently, the AntiKeyClowns have simply chosen to communicate with these people 'on their own level'. Crude put-downs are all they understand.

Also, different AntiKeyclowns use different tactics. Some flood. Others tweak. Others debate intelligently.

Unless this ongoing "dialogue" involves you, the best advice we can give you is to simply ignore it.

Andy, the only fly in your metaphorical ointment is that jaywalkers do not attempt to make a 'hobby' out of jaywalking. There are no businesses dedicated to making it possible for people to illegally jaywalk. Jaywalkers do not get together to see who can jaywalk the most recklessly or tie up the most traffic. Fines for jaywalking are not $17,000. Jaywalkers do not share tips on the best places to jaywalk. Jaywalkers do not form clubs for the purpose of organized jaywalking. Jaywalkers do not post idiotic justifications for breaking traffic laws in public newsgroups.

Public demonstrations are effective for rallying support, but do
little to influence lawmakers -- they hear only money, and with money
they buy their elections.

If the power rates continue to climb, you are going to see a nasty
jump in the homeless and jobless rates. This will result in a
class-split between the 'have's and the 'have-not's. The affected
citizens may respond with a general boycott and/or the establishment
of an underground economy. At the worst, expect widespread organized
civil disturbances countered with an armed military response, probably
by the National Guard.

This is only a prediction, but it is not an exageration. It is the
result of a long study into the causes of modern civil conflicts, and
from first-hand observation of the civil war in Lebanon. Of course,
all this may be averted if GW ever pulls his head out of his ass.

Having just read my weekly News of the Wierd e-mail, the urge struck to make
a few comments:

1. You have cleaned up your act a bit which is welcome.

2. You show signs of learning to write a coherent paragraph, also welcome.

3. The flooding is about the only sign left of insanity. Prevail on your
other personalities to stop it and peace and harmony may yet reign supreme.

While on a personal level I tend to be a bit cynical, believing that the
Gung-Ho shall inherit the Earth for no better reason than they deserve it,
you have obviously taken a more existential viewpoint and feel called upon
to crusade. Whatever, no one appointed either of us the font of all
wisdom; I for one don't want the job anyway.

I still think you are simply avoiding a code test but WTH.

Dick N&#65533;BK

>All hams and any other band out there listen up.
>You are doing nothing but pissing off the CB'ERS and making it hell on
>yourselves.

Mr. Troll, you are ignoring an important fact of life. Many of the folks you hear on CB also hold a ham license. It is not a "them vs us" issue. Anyone can use the CB band, ham or otherwise.

>You are forcing them to buy
>linear amps to screw with you even more.

By doing what? The last time I twisted somebody's arm to make him purchase an amplifier, my jaw was sore for a week--if you get my drift.

>If you don't
>like it then band together and do something about it....

We did. About a century ago. And the organization is working on the CB-in-10-Meters problem, as we speak.

Here's the good news: Stay out of 10 Meters, and nobody cares WHAT you do.

hahaha, you can't get 2 truck drivers to agree on what time it is let alone get a majority of them to agree to shut down on a particular time or day. I do not mean this as an insult, my uncle was a truck driver, my grandfather was a truck driver, I was a truck driver. We neet to get our collective heads out of our butts and work on a sollution. There is a young man in my area who recently engineered a fuel that is made from soybeans, his car will go 64 MPH and he gets 90 MPG!!!!
And the most important part, he hasn't sold out to the gas companies, so there might be a chance yet.

Dave,
What a load of crap. For starters, go back and look at what he had to say about energy during the campaign. Read his comments regarding the oil company's gripes about small profit margins. Read between the lines. He told everyone that he was going to take care of the oil industry, and they in kind would take care of him. It worked, he won the office, and now he is fulfilling his campaign promises. Secondly, only a small percentage of eligible citizens are actually registered to vote, and of those only a small percentage even bother to cast a ballot even given the ease with which early voting, mail in voting, etc. is generally allowed across the nation. Of the voters who do cast a ballot, many do so out of ignorance without checking into the facts of the situation. Folks, you voted for the guy, an inept entrepreneur who could never make money, and you got what you deserved. Live with it.

If you want to see a successfull troll see "respond ham abuse" I thought it was semi-obvious but the result was a Ham fight:)
Sometimes text can be more fun then "AAUUDDIIOOO!"
The funny thing is that there is almost no rancor between the 4-watt guys and the big radio/linier amp guys or the freeband guys. Compare that to the code/no-code purile penis envy going on in Hamboland:)
Sincerely,
Ken(BEEP)!

The best is when one or more trucks head towards the EASYPASS b4 they
realize they need the full service on the GWB and totally block the 4
easypass lanes on the left. Then it gets nasty!
Sincerely,
Ken(BEEP)
PS. gotta get that roger beep fixed on my superstar 3900ghp:)

Nice to hear from you, Bill. I hope business is treating you well, sir.

>In every case, Base or Mobile CB type radios can all
>be modified in some way to BECOME illegal transmitters.

If you could drop me an e-mail when that 2547 becomes available, I'd appreciate it. Truth's I don't need it but my very first rig was a Galaxy and it'd be nice to have a LEGAL rig of the same brand in the shack. So I'm doing a little comparison shopping. Thanks, take care, and 73.

Mark

2333. ILLEGAL CBERS ARE ALL OF THE FOLLOWING THINGS

Newsgroup: rec.radio.cb
Date: 2001-05-20 17:54:11 UTC
From: CB RULE ENFORCER <ENFORCER@FCC.COM>
Message-ID: <3b07f6b3$1@news2.mibx.net>
Source record: 82676

1. Criminals. They are in violation of regulations that could land them in jail or get them big fines.

2. Uncaring about lives and safety. International search and rescue operations are only one of the services allocated the "freeband". There are others as important. The illegals have no concern for the disruption caused to these services.

3. Uncaring about neighbors and their own towns in general. RFI to consumer electronics, interference to hospitals, airports, public safety services, etc. Is almost solely a result of illegal CB equipment. The statistics do not lie. There are millions of CB'ers, only a few hundred thousand hams. Amateur equipment is meant to be operated, generally, at a higher power level than CB radios. It is therefore subject to tighter spectral purity requirements than CB radios. CB radios are meant to be operated at low power levels, which means that these "dirtier" rigs, will not pollute enough to be worried about IF THEY ARE OPERATED LEGALLY. As if that will happen, given the socially mutant attidudes expressed in this NG.

Be PROUD, ILLEGAL CB'ers. You are a sociopathic group of lawbreakers vainly attempting to justify your actions. No wonder you are slammed with gay stuff...You act like gays trying to promote their agenda, even though the world knows they are an aberration. So are you.

Here's the deal:
Of all the cbers in the world, a VERY small percentage are here on this
newsgroup.
So if the dogooders want to bitch at cbers, shouldn't they do it on the cb?
That won't happen because up there they would be like a fart in a hurricane.
They actually think that being a total jerk on this newsgroup will change cb
radio in the real world.
Ain't gonna happen.
So flame on twits.
You're only here because its dead on the HT.
It's really kind of entertaining.

Well, I must say this is the first post you have made
that I can agree with. BUT, I must throw out a curve at
the statement..... Ever hear of an event that happens
every last Friday of the month on the streets of San Francisco?
I've read about it on the motorcycle newsgroups, it's
called Critical Mass. It's a gathering of groups of bicycle
riders, some estimates around 200 to 600 bicyclist, that
protest in the streets of SF. They ride their bikes in mass
groups, taking over streets, intersections and sometimes
attempting to ride on to the local bridges. All with one thing
in mind..... Cause traffic and bring attention to themselves!
Apparently they are not happy with some
bicycle laws that limit their activities and with the lack
of some laws for their safety.
This is all done without permits, permission from the
city & county and completely against the law! Supposedly
they have web sights that tell you where to meet, how to
cause the most traffic at major intersections, where to
create the biggest nuisances for car drivers and so on.
They hand out fliers at the events explaining to bicyclist on
how to avoid getting arrested while causing major traffic
jams on city streets that lasts for hours.

So with all that said, there is an example of what was asked by you.
Though some people do get arrested (
from the figures at the web sights, .5 to 2% depending
on size of event) it's relatively low. The same figures
could probably be applied to Illegal cb operation, though
I'm only guessing on that.

>
> Pathetic. That's the only word to describe you guys. You are all
stirred up
> cuz someone DARES challenge your supposed rights to defy federal
laws and
> make the CB band miserable for legal CBers.
>
> Your weaselly excuses for breking the law are also MUCHO LAME. Yet
we get
> you to keep making newer and more ridiculous "justifications for
being illegal"
> every day.

Not really, if you do anything illegal, anything,!! That
means speeding, spitting, jaywalking, peeping tom,
riding a bicycle on the wrong side of the road, not
wearing a helmet on a motorcycle(where applicable)
going in the wrong way at a parking lot, smoking
with-in a certain distance from a building (see motorcycle),
going to fast in a no wake zone, fishing in a closed area,
hunting with illegal ammo etc, etc, etc., that makes you illegal
everyday, every time you do those things True? or False?

> Hint: no one is forcing you to read or respond to what we write. But
your
> EGOS won't let you ignore it. You are so used to being "king of the
band"
> with your illegal amps that you can't get a life other than to cry,
whine,

> and desperately argue with us.

Correct, no one is forcing us to read your posts, but at the
same time..... No one is forcing you to speed, spit, jaywalk,
peeping tom, ride a bicycle on the wrong side of the road, not wear a
helmet on a motorcycle(where applicable) go the wrong way at a
parking lot, smoke with-in a certain distance from a building (see
motorcycle), go fast in a no wake zone, fish in a closed area, hunt
with illegal ammo etc, etc, etc correct, True? or False?

> So to all KeyClowns everywhere: Thankyou! You entertain us greatly.

Your more than welcome, I enjoy having you kicked off the ISP's when
you do the Mass postings and all the others
ISP's rules you seem to ignore so well.
I do have to commend you though for not posting against
the rules of your ISP, for all the rules breakers out there...

I thank him.....

That happened at the Trogges Neck Bridge !!
One of these guys doing that cut off a woman in some small car pinning her under the trailer.
A shouting match encored then several motorist got out of there cars and started
kicking the sh*t out of the driver.
Some other trucker cam out with a pipe another with a pistol then the cops with pistols !
"One hell of a scene"

No ca ca intended! We voted for him to LOWER the fuel prices. WE KNEW that GORE would raise them because the earth worshippin' communist wrote that HE WOULD.

What I meant to say is that my LITTLE INDEPENDANT gas station in Ohio told me a story recently about PRICE FIXING. He said he got a call from the "Corporate Price Patrol" people from his company and they TOLD HIM to raise the price, since he WAS the lowest! He told them "YOU ARE Price Fixing, aren't you?" This WAS on a local level. I see it on a regional level in my travels, and we ALL know that it is going on on a NATIONAL level, as well as the world level. The Truck drivers (Independants) went to Washington to CRY about it, twice. When will US 4 wheelers go there to complain like they did? I am ready to start a "Million Car March" to permanently CLOG the Beltway and inside it to stop the Governments involvment in aiding OPEC, the Oil Companies, and everyone else involved except the people who they are suppose to represent and "work for our good" as Romans 13 says they are suppose to. A preacher on the Alaskan pipline in the early 70's wrote books and showed there was NO Energy crisis then, other than a Govt. & industry & foreigner created one. Now Bush wants more communism (control) of alternative energy sources (tax credits) so I can't power my million watt CB kicker from my million watt alternative AC power supply! Sounds like we need a MILLION CAR CRUISE to the District of Criminals to tell them to QUIT controlling & fixing prices!!!!!!!!!!!!! If we go back to an UN-debatched currency, gas will go back to .19 gallon!!!!! 2 Chron.7:14 is STILL THE Answer. Gas prices are a Deut. 28 problem!!
Dave!!!!!!!!!!!!!!!!!

"Gary Danaher" <gdanaher@home.com> wrote in message
news:3B07C1DD.446F9445@home.com...
Dave,
What a load of crap. For starters, go back and look at what he had to say about
energy during the campaign. Read his comments regarding the oil company's gripes about small profit margins. Read between the lines. He told everyone that he was going to take care of the oil industry, and they in kind would take
care of him. It worked, he won the office, and now he is fulfilling his campaign promises. Secondly, only a small percentage of eligible citizens are
actually registered to vote, and of those only a small percentage even bother
to cast a ballot even given the ease with which early voting, mail in voting,
etc. is generally allowed across the nation. Of the voters who do cast a ballot, many do so out of ignorance without checking into the facts of the

situation. Folks, you voted for the guy, an inept entrepreneur who could never
make money, and you got what you deserved. Live with it.

hahaha, you can't get 2 truck drivers to agree on what time it is let alone get a majority of them to agree to shut down on a particular time or day. I do not mean this as an insult, my uncle was a truck driver, my grandfather was a truck driver, I was a truck driver. We neet to get our collective heads out of our butts and work on a sollution. There is a young man in my area who recently engineered a fuel that is made from soybeans, his car will go 64 MPH and he gets 90 MPG!!!!
And the most important part, he hasn't sold out to the gas companies, so there might be a chance yet.

Can you find the quote where Gore said he would raise the prices? You can search the archives but I don't think you will find it. Bush on the other hand frequently talked about helping the petroleum companies. BTW, you can call politicians a lot of names, but please check the dictionary first. Gore might be a lot of things, but not a communist. Here in Texas we have a few choice words for him as well. Dumbass and drunk come to mind first. His daughter is taking right after the old man. Appeared in court in Austin wearing peddle pushers and flipflops. Very tasteful.

It wasn't a CENTURY ago, Sunny! It was 1933 when Roosevelt brought the 6th plank in. I am aiding in your request--I tell ALL that I meet to stay off the 28 MegaCycle ghostland! Hey--do you know what I remember listening to my SW radio kit (I think) around 1970? I was listening to OLD Hams talk on Ancient Mary on 10 meters then (that's AM Modulation for all you N8 commies)!!!!! Looks like today's 10 Meter CB'ers were just copyin' them!!!!!
Dave!!!!!!!!!!!!!!!!!!!!

"Qrm2000" <qrm2000@aol.com> wrote in message news:20010520074937.26724.00000467@ng-bj1.aol.com...
>All hams and any other band out there listen up.
>You are doing nothing but pissing off the CB'ERS and making it hell on >yourselves.

Mr. Troll, you are ignoring an important fact of life. Many of the folks you hear on CB also hold a ham license. It is not a "them vs us" issue. Anyone can
use the CB band, ham or otherwise.

>You are forcing them to buy
>linear amps to screw with you even more.

By doing what? The last time I twisted somebody's arm to make him purchase an
amplifier, my jaw was sore for a week--if you get my drift.

>If you don't
>like it then band together and do something about it....

We did. About a century ago. And the organization is working on the CB-in-10-Meters problem, as we speak.

Here's the good news: Stay out of 10 Meters, and nobody cares WHAT you do.

QRM

I have heard that in one of his earth worshippin' communist books, probably "Earth in the Balence," he calls for more EPA nonsence to suck the $$$$ out of our wallets by using "re-formulated gas," and other such nonsence to raise prices, so YOU LIBERALS and us they will try to take us out of our cars! I heard something explained from his book that was shown to RAISE GAS Prices! Gore IS an Earth Worshipping Communist! How many planks does he need to practice to be a Communist? Bill Clinton IS a Communist and was confronted on being so by 1 of my customers 2 years ago that graduated with him from HS ! I'm afraid that Bush is a Republican Communist since he hired NJ Commie Whitman for the EPA, instead of abolishing it!!! I'm afraid that Bush is just an OILY GORE !They can have our 4 wheelers when they pry our COLD DEAD bloody fingers from the steering wheel! But GOD will judge them first when we get his people to DO 2 Chron. 7:14, and then we will get OUR country back!!!!!!!! Don't be messin' with my mobeel, cause I need the gas to blow smoke with my 108" whip flying down the I Hate IKE tank trail!!!!!!!!!!!!!
Dave!!!!!!!!!!!!!!!

FYI, the federal government takes a rather dim view of someone impersonating it's agencies.

You also might want to pay closer attention next time you decide to play make-believe radio cop: the correct domain is "fcc.gov", not "fcc.com."

You're welcome.

Sorry Dick, but this bozo (me) isn't a ham at all. The code is a
breeze, I learned it from my Uncle listening to the SW as a kid. I
don't know why some people complain about it and others wear it like a
badge of honor. But judging by the enormous pissing contest between
the code-ranks, it is evident that hams behave no different than
CBers, and that makes these petty comparisons moot.

Source record: 82773

While cleaning out my harddrive I found
some interesting things saved.

The Landshark
Please, try this recipe, it's great!
--
Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

Hello & Good Afternoon all,
Just another quick post, if you are
wondering about some response's to
any complaints here a couple.
So every vote, or in this case
complaint can count.

The Landshark

--
Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

So, let me understand you here. If you disagree with them, they MUST be a communist, right? And secondly, you rely totally upon other opinions or what someone said they heard or read--in otherwords your opinions are based upon second hand information, right? That's what you are saying here. You're really big on name calling. Communist this and liberal that. God will forgive you later on if you are wrong or mistaken, right? Good Christian. Screw up really well and then beg for forgiveness. How about giving these matters a little actual thought up front so you won't need to ask for forgiveness? Do your own research. You have intgernet access. Instead of wasting hours here or on your CB, do a little searching on the web and get the straight skinny, and then make up your own mind. Heck you might be right all along, but you won't know until you discover it for yourself instead of being drug around by your nose by some anonymous opinion maker.

Hi all,

I have a couple old mobile CB's and before I just trash them, I'm wondering if anyone wants them.

One is an old HyGain 23 channel, the other is a Realistic 40 channel with weather.

Anyone who offers enough to cover my trouble packing them up and the shipping cost can have them. I'll throw in an old SWR meter and a magnetic mount antenna too. No guarantees on working condition.

Send me an e-mail for more info. I have a digital cam too, if you want pics.

Many thanks,
Vic Rollins

Did I say you were reported? Did you
post something that should be reported to
your ISP? Please, if I missed something
feel free to forward it yourself.

The Landshark

--
Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

Spock was UNConstitutional in his dribble! He sounds like a commie! We are ruled by LAW, not MEN. The Constitution limits the govt., not the people. The people should seek GOD for their needs, not the govt. Too much Humanism taught in Star Trek !
Dave!

"Kenneth" <pwrguy@intergrafix.net> wrote in message news:tfsigi7pue72b@corp.supernews.com...
Spock had some great logic that would shed some light into the current controversy. He said,"The needs of the many outweight the needs of the few or the one".
If we apply Spocks wisdom to the rf spectrum we get,"The needs of the many(cber's) outweight the needs of the few(hams) or the one(# of hams left on 10m).
10M is now for all practical purposes a cb band. Truck drivers will soon be looking at the 6 meter band because 10m is getting crowded.And we will take that too and keep it.

illegal
> everyday, every time you do those things True? or False?)
>
> YOU SEEM TO HAVE A PROBLEM GRASPING THE CONCEPT OF PERSONAL
RESPONSIBILITY. THIS
> IS THE WAY SMALL CHILDREN THINK, BY THE WAY.

Nice editing, let's try it again:
Not really, if you do anything illegal, anything,!! That
means speeding, spitting, jaywalking, peeping tom,
riding a bicycle on the wrong side of the road, not
wearing a helmet on a motorcycle(where applicable)
going in the wrong way at a parking lot, smoking
with-in a certain distance from a building (see motorcycle),
going to fast in a no wake zone, fishing in a closed area,
hunting with illegal ammo etc, etc, etc., that makes you illegal
everyday, every time you do those things True? or False?

It was a question, you didn't notice the ? at the end?

> That means speeding, spitting, jaywalking, peeping tom,
>
> WHAT???? HOLD ON HERE A MOMENT. IF YOU THINK "PEEPING TOMS" (E.G., SICKOS
> LOOKING INTO YOUR BEDROOM WINDOW AT YOUR WIFE UNDRESSING) SHOULDN'T BE
> PROSECUTED BECAUSE THEY HAVE COMITTED A MINOR CRIME - YOU ARE A TRULY
MISGUIDED
> INDIVIDUAL AND WE FEEL SORRY FOR YOU. HOWEVER, YOU DESERVE TO BE
PERSECUTED IN
> THIS NG TILL THE DAY YOU LEAVE.

Again, it was part of the first question you did not
answer, so how can I respond to this statement?

> riding a bicycle on the wrong side of the road, not
> wearing a helmet on a motorcycle(where applicable)
> going in the wrong way at a parking lot, smoking
> with-in a certain distance from a building (see motorcycle),
> going to fast in a no wake zone, fishing in a closed area,
> hunting with illegal ammo etc, etc, etc., that makes you illegal
> everyday, every time you do those things True? or False?
>
> YOUR ATTEMPT TO CLASSIFY OUTLAW CB AS A CRIME UNWORTHY OF ENFORCEMENT IS
LAME
> LAME LAME.

Now where did I claim that? I was asking a couple
of questions, to which I might add, you have not
answered yet.

> HERE'S WHY. MOST JAYWALKERS, TRAFFIC LAW VIOLATORS, SMOKING LAW VIOLATORS,
> SPEEDERS, ILLEGAL HUNTERS, ETC. DO NOT ATTEMPT TO MAKE A LIFELONG,
ORGANIZED
> "HOBBY" OUT OF THEIR TRANSGRESSIONS. CBERS ARE THE ONLY BREED THAT DO
THIS -
> THEN TRY TO JUSTIFY IT WITH LAME LAME LAME EXCUSES IN PUBLIC NEWSGROUPS.
>

Now there your wrong, you see breed and hobby have
two different meanings. You had better get the dictionary
and look those words up so you can understand them
better, then you won't be misunderstood, as you are now.

> > Hint: no one is forcing you to read or respond to what we write. But
> your

>
> LANDSHARK, YOU CLEARLY THINK THAT LAWS ARE MEANT TO BE OBEYED ONLY IF YOU
FEEL
> LIKE IT AT THE TIME. YOU ARE ONE FUCKED UP PUPPY WHOS EMOTIONAL MATURITY
WAS
> ARRESTED AT ADOLESCENCE.

Not really, I believe that all laws should be obeyed, but some people have,
can and will disobey them, that's a
fact and there's nothing you or I can do about those
laws broken that I have described. They are to be
enforced by the proper authorities, not vigilantes.

> > So to all KeyClowns everywhere: Thankyou! You entertain us greatly.
>

Greetings!

You didn't get the point. Anyone who violates a law is on their own. Same applies to those that abide by the law, only they're left alone.

Most of the time, when rules are violated, the "tree is falling and there is no one around to hear it."

Meaning, there is no one around to notice, get hurt, or report it.

The other half of that, is the people that tend to take the law into their own hands and run people off the road because they saw them violate a law they abide by. It's just you versus them. They would be willing to break a law, to see you punished.

Take this to 27MHz, there is a group of locals that use 22 Lower to converse. And yes they do run linears. They got stomped on, by skip and other pissed locals, when they tried using them on the regular band. So they had no choice but to move off.

Conduct? Well, that is what started this "war" that made them move off. They didn't conduct themselves to a level that other people appreciated, so the ones that didn't like it started doing damage and eventually ran them off because of they got tired of constant harassment.

That is the point I'm trying to make, don't fit the norm, you get pushed out. You do something wrong, you'd better hope the police do arrive to protect you, else you're fair game.

An ISP can't protect you from spam, but can reduce the inconvenience by enforcing a Terms Of Service. You need to click "I Agree" in order to subscribe.

Laws are designed to protect both the criminal and the victim. Up here, it's Anarchy. Peer pressure and consensus are the two largest forces in providing some means to control. The police simply arrive to do the paperwork and clean up the mess.

So when you mentioned an "industry" marketing to the idiots that use the crap that you have a campaign against, there have been others that have already taken it upon themselves to fix the problem with the individual, not a world wide spam.

Since this is an International NG, much of what is discussed due to FCC rules, and the USA has the larger share of the 'net subscribers, that skews the demographics. There are other countries that use the same spectrum as they see fit. And the FCC cannot prosecute.

This campaign works both ways, you notice laws are being broken, and obviously, you're taking steps to correct this.

However, the other side is also working against you. They will always be out here stating their side. And they will also use your conduct as a catalyst to prove that extremists exist on both sides.

It's a "So, What's your point?" situation.

If you empower yourself to work behind the scenes, you may find it's far easier to recruit disgruntled CB'ers to work your side.

In a way, you've done that. Look at the recent posts from some users, they may have, or may not - but at the current time, they're not.

But, do they? I don't care and it's none of my business.

The regulars out here, are conducting ourselves to the best of our abilities, a lot of good and bad people disappeared because of the spammed tripe.

So in a way, your Anarchist scheme worked. Only now, you're testing the patience of those that don't care about who believes in what, we just want to get on with the hobby.

BTW - a careless jaywalker often pays with their life. A simple fine only pays for the office clerical paperwork, a grave marker or the ambulance ride.

On 20 May 2001 07:55:46 GMT, while the modem was busy tying up IRQ's with the Mouse, "AntiKeyClown Research Team" <research@team.com> dissertated the following:

:+> Andy, the only fly in your metaphorical ointment is that jaywalkers do not
:+> attempt to make a 'hobby' out of jaywalking. There are no businesses dedicated
:+> to making it possible for people to illegally jaywalk. Jaywalkers do not
:+> get together to see who can jaywalk the most recklessly or tie up the most
:+> traffic. Fines for jaywalking are not $17,000. Jaywalkers do not share tips
:+> on the best places to jaywalk. Jaywalkers do not form clubs for the purpose
:+> of organized jaywalking. Jaywalkers do not post idiotic justifications for
:+> breaking traffic laws in public newsgroups.
:+>

Greetings!

Too bad you didn't know this back in 1994, when this was the only
group created by the Super-8 hierarchy for the purpose of keeping the
Amateurs and non-liscensed radio operators separate.

The net has changed since then, but this is still the major part of
the Super-8 hierarchy having chartered beginnings.

On Sun, 20 May 2001 02:04:50 GMT, while the modem was busy tying up

Greetings!

Since you've posted this as spam, I will only post once, take a look
at this original FAQ from the rec.radio.cb charter. It simply states
basic netiqquette and outlines modes and operation bands for various
locals in different parts of the world.

http://www.iserv.net/~codyspc/cbfaq.htm

Maybe the issue of "out of band" is why you feel that discussion is
illegal. It's not, it only violates FCC rules, not ITU. Some
countries, like Japan, and Australia, use FM, and UK uses the Dimes
instead of the Nickels on FM. Please take a look.

On 20 May 2001 01:51:00 GMT, while the modem was busy tying up IRQ's

Please consider the possible consequences of using an amp. You can get
fined several -thousand- dollars, lose other FCC privileges, and your
equipment is subject to search and seizure without a warrant. If you
refuse to allow the FCC to inspect your station (usually without
notice), you can be fined several thousand -more-.

Take a look at www.rainreport.com and www.fcc.com.

For the record, Amateur licensing dates from 1912, the ARRL dates from 1914. The Navy ran radio after WW1 until 1920 when it was pried out of Government hands by Herbert Hoover's Commerce Department who ran it (probably illegally) until the Federal Radio Act of 1927 when Ma Bell wanted out of Interstate Commerce Commission Regulation and was moved to the new FCC by the Communications Act of 1934.

The history is over; go in pieces.

I didn't see that in the charter. But if that is so, why didn't they
call it something like rec.radio.not.liscensed?

There are other newsgroups that illegal operators can use, such as
alt.pirate.radio, alt.radio.pirate (yes, these are two seperate
newgroups), alt.radio.cb.skip, etc.

>The net has changed since then, but this is still the major part of
>the Super-8 hierarchy having chartered beginnings.

And the CB was never intended to be a hobby, but that has changed as
well. The fact remains, if it ain't legal, it ain't CB.

Hello & Good Afternoon Sparky,
Please don't be a hypocrite, you have and
said you will in previous posts run power,
alter radios to operate out of band, so this
"Holy than thou" routine is getting a little
old.

The Landshark

Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

I'm not a communist, I'm a CBer. But if there is a law outlawing
communism, please post it because I missed it.

FYI, communism, socialism, and collectivism are wonderful concepts,
but they just don't work because they fail to address the human
motivation of 'greed'.

No, SODOMITES ARE the most disgusting ones on earth. Did anyone say colostomy here? Read Romans 1 and you will see WHY. Becomming a Christian means to leave your FAIRY tale life and come to THE TRUTH of reality, Jesus Christ (GOD in the flesh). He IS THE Truth, the WAY, and the LIFE. He's got ALL the answers for you, the Hambos, W8, and everyone else for every realm of life, including CB. How do Christians destroy people--by taking away their Alchoholism, their Cigarettes, and other sins (violations of God's Laws)? Humanism teaches "Fairy tales" and the Bible does NOT! The people you may think of as Christians may NOT be Christians! If they don't keep Jesus's Commandments, then they ain't one! Looks like you need some reading of Proverbs and Matthew to Revelation to see what one is. Make sure you read it in the KJV translation, though. The NIV and some other versions are per-versions with Sodomites on the boards that changed the origional meaning! Being "stuck" with the TRUE GOD is much better than toasting in a place made for satan and his angels. The times that God said that he repented DID do him good, because EVERYTHING he does is GOOD ! You sound like a bitter soul that needs to learn about the Greatness, power, and provision giving benefit giver of what he CAN show and do for you! He can get you on the right path of Hapiness and Wisdom, Knowledge and Understanding, 10-4 ?

I believe this should be more
than enough Frank.....

The Landshark

Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

>Hello, I would like to buy a QUALITY tube amp that runs on REAL RF tubes!

Is there any particular reason you want tubes?

>Approx 350 to 500 watts is all I want.

That's quite a bit, considering you can work the globe with 100 watts
and a good antenna, or 10 watts and a very good antenna.

> A preamp is NOT necessary.

That depends on the drive requirements.

>26.9 to 27.4 is all the bandwidth I need.

How about something that includes other bands, just in case you ever
decide to get your license? And that way the FCC might not destroy it
after it has been confiscated.

> The radio is an AM only radio
>so SSB is not required.

If it's linear, it doesn't matter. An amp can be built to demodulate
and remodulate at class-C, but at this power level it would be
overkill.

> It should run on 110V AC.

Any amp will run on 110VAC provided you have the correct power supply.

>This is not a joke. Please respond to PRIVATE e-mail (or to the group).
>
>Let me know what the drive should be and the tube compliment. Rumor has it
>that a QUALITY amp is made in Oregon somewhere. I don't know.
>

>the tubes. 572Bs should work good if driven correctly I would think. Or
>even 6146s. I DON'T want a KW! 350 to 500 watts of CLEAN power on AM is
>what I want.

It will take quite a few 6146s to get 500 watts. A pair of 4CX250s or
a single 5-500A with reduced drive will get you there with much less
hassle. But if you really like the glow, there are many other options.
The only real problem is the power supply, and that's not hard if you
know how to handle a couple thousand volts.

>Any suggestions or is there anyone out here who is capable of building this
>perfect beast? I do not want transistors....thanks, but no.
>
>Master Chief

I can custom-build any amp to specs, but be prepared to pay. If you
want to use it illegally, then expect to pay upfront. I recommend
getting a license.

Sparky, FLRC

well with your amp. Xtal freq set for 105.3 MHz.

I'm saying Frank,
That if you see a crime being committed, you
report it to the proper authorities, you don't grab
your scanner, get a big stick and go chasing people
walking down the street, just because you think they
might want to rob you. That's called "vigilantism"

Dave,
I'm going to presume here that you are minimally educated and feel as if your talents are underutilized. To you, everything around you is communistic, unconstitutional, immoral, and fattening. Read a newspaper from time to time instead of this newsgroup, get an education, and think. Try to avoid these repetitious cliches. You're boring us.

Oh ho ho!

Landshark you are perhaps the sleaziest so-called family man we have ever observed. Despite the fact that your statements are always carefully evasive ("I never said I supported illegal CB") you STILL can't win an argument -- so you start looking for dirt in your opponent's background.

What a piece of work you are!!!

Thanks Moparguy!
I'm not one to pull punches nor would I ever back down to these loudmouth
cry-babies. Sure there are plenty of the same opinion as me and while I
don't mind hearing from people like you, that is not the reason I post the
way I do. Call me rude, brash, obnoxious, opinionated....
Whatever you like! I'm not going to change the way I feel about radio just
because of a few dweebs who actually figured out how to post to a news
group.

2447. ILLEGAL CBERS ARE SOCIAL MUTANTS

Newsgroup: rec.radio.cb
Date: 2001-05-21 01:20:33 UTC
From: AntiKeyClown Battery C <battery@fire!.com>
Message-ID: <3b085f51$1@news2.mibx.net>
Source record: 82740

ILLEGAL CB'ER ARE.....

1. Criminals. They are in violation of regulations that could land them in jail or get them big fines.

2. Uncaring about lives and safety. International search and rescue operations are only one of the services allocated the "freeband". There are others as important. The illegals have no concern for the disruption caused to these services.

3. Uncaring about neighbors and their own towns in general. RFI to consumer electronics, interference to hospitals, airports, public safety services, etc. Is almost solely a result of illegal CB equipment. The statistics do not lie. There are millions of CB'ers, only a few hundred thousand hams. Amateur equipment is meant to be operated, generally, at a higher power level than CB radios. It is therefore subject to tighter spectral purity requirements than CB radios. CB radios are meant to be operated at low power levels, which means that these "dirtier" rigs, will not pollute enough to be worried about IF THEY ARE OPERATED LEGALLY. As if that will happen, given the socially mutant attidudes expressed in this NG.

Be PROUD, ILLEGAL CB'ers. You are a sociopathic group of lawbreakers vainly attempting to justify your actions. No wonder you are slammed with gay stuff...You act like gays trying to promote their agenda, even though the world knows they are an aberration. So are you.

No, I am over-extended & over-utulized! Sounds like you don't love our US Constitution!Not everything around "me" is communistic, just YOU liberals are! WHY should I read a LIBERAL Communist newspaper (your local Pravda), when I can get better news from SW radio (5070) & CB instead? The Fear of the Lord IS the beginning of Wisdom, Understanding and Knowledge. Since your professional "university" training doesn't have that, but Humanism instead, why should I get brainwashed in such LIES like you did? I haven't even ever talked about fattening--is that what you liberals have a problem with? Get OFF the check & get to work, sunny! I prefer instruction from the Bible instead of the humanist's "edjumucation" that you so highly want us to all have. That's why YOU are bored!Then if & when we get our egg heads from college so we will all be "professionals," we will ALL go to HELL then!!!!!!!!!!!! (that's because they HATE God there!)
Dave!!!!!!!!!!!!!!!!

news:3B0862E1.C351FB3F@home.com...
Dave,
I'm going to presume here that you are minimally educated and feel as if your
talents are underutilized. To you, everything around you is communistic, unconstitutional, immoral, and fattening. Read a newspaper from time to time
instead of this newsgroup, get an education, and think. Try to avoid these repetitious cliches. You're boring us.

Yeah I hear about that incident quite a bit on the air. They simply call it "Church St." because the guy running the power shut down church st. and all the other streets around it. There has been one other incident where a woman took her next door neighbor to court because she could hear him on her corded phone while it was on the hook and also her TV. The woman bought new phones, TVs, stereo equipment and had the wiring changed on the new stuff and installed fitlers and he was still being heard. After quite a few requests for him to do something about it and him refusing, she took him to court and he was given a fine. The guy's name is Bruce Carlson I believe. He's sold me some shit equipment b4 and claimed I opened all of it up and started turnin pots and shit. I was only 14 when that happened and I still knew better than to screw with shit inside.

The abuse of truckers on CH19 happens every signle night around midnight. Usually only one guy but he sometimes brings one or two more into it. I've asked him why he does it and he told me its just fun to tweak their trigger.

I understand all of your post here but there is one thing that I am wondering about. Why flooding? Reguardless of how many messages you post, people are going to still do what they want and eventually ignoring you. Complaining to your ISP or whatever is doing no good because you are obviously still here. The only option they have is to ignore you. I'm not going to ignore you simply because some times there is something actually worth reading.

Hello & Good Evening Brian
You are correct in every way except one.....
Complaining to an ISP does give results, as
proved by Newsranger and at least 2 others,
who's names escape me at the moment.
His only other alternative is to sign up with
another service, do the same thing, get complaints
against him, until he runs out of places to go.
Don't ever think that there's not a blackball
list of people, no, don't think that.

The Landshark

--
Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

You may not make threats against another person via e-mail or news or any
other electronic media/service we provide. We are prepared to defend your
right to free speech to our fullest ability, but we will not defend you if
you violate this simple rule.
You may not mount an attack against our system or any other. This includes
mail bombing (sending three or more unsolicited pieces of e-mail or files
exceeding 60K), or attempting to gain root access, tsunami or flood or
annoyance utilities like "nuke" or "flash".
You may not "spam" or flood the usenet with a single post to a large number
of newsgroups not related to the topic of your article.
Forging of e-mail or postings (to include cancel messages, whether manual or
automated) will not be tolerated and will cause the offending account to be
closed.

> 2. Uncaring about lives and safety. International search and rescue
operations

> services.

Member agrees: (1) to comply with US law regarding the transmission of
technical data exported from the United States through the Service;
(2) not to use the Service for illegal purposes; (3) not to interfere
or disrupt networks connected to the Service; and (4) to comply with
all regulations, policies and procedures of networks connected to the
Service.

The Service makes use of the Internet to send and receive certain
messages; therefore, Member's conduct is subject to Internet
regulations, policies and procedures. Member will not use the Service
for chain letters, junk mail, spamming or any use of distribution
lists to any person who has not given specific permission to be
included in such a process.

Member agrees not to transmit through the Service any unlawful, harassing, libelous, abusive, threatening, harmful, vulgar, obscene or otherwise objectionable material of any kind or nature. Member further agrees not to transmit any material that encourages conduct that could constitute a criminal offense, give rise to civil liability or otherwise violate any applicable local, state, national or international law or regulation. Attempts to gain unauthorized access to other computer systems are prohibited.

Member shall not interfere with another Member's use and enjoyment of the Service or another entity's use and enjoyment of similar services.

Ynnmail may, at its sole discretion, immediately terminate Service should Member's conduct fail to conform with these terms and conditions of the YTS

Subject: For sale: A GREAT solid state BASE CB AM/SSB
Newsgroups: rec.radio.cb
View complete thread (2 articles)
Date: 1999/08/24

I have a MINT, case never opened up, NEVER MESSED with, Radio Shack TRC-457
base SSB CB. It is a stock 40 Channel, but can be modified to go 26-29mhz. I
also have the modification instructions from SECRET CB. It takes 3 switches
and
some wire, basically to do it.

This is a Classic 1977 Vintage radio with the Uniden 858 PLL chip in it.

Comes with a Radio Shack amplified desk mike.

The radio is 9.8 on a scale of 1 to 10..no bull...excellent shape..

I will take 150 bucks for it...

email n8wwm@aol.com

If yer in Chicago area you can come pick it up.

2464. Whats a good CB BASE AMP??? serious question

Anyone know of a good AB type amp with good modulation minimal harmonics splatter etc.. I was looking at the Palomar Skipper 350 amp and galaxy 250 amp at export electronics. or a Palomar Magnum 4500 (mobile but using a powersupply)

anyhow I dont want to cause TVI or bother the ham 10 meter or 12 meter people with a shit amp or kill 3 cb channels from a poor linear. the radio Im using is a Magnum 257

Actually, a couple hours ago I was on my way back from the store and I
spotted three punks looking to steal a car. Sure enough they stole
one, and because I had the liscense plate of the other car they got
caught. That's not vigilantism, that's good observation skills
combined with a proper response.

However, when I see punks walking down the street at 3am checking car
doors, the big-stick method comes in handy.

I have no other FCC privliges. and I tryed learning morse code and no matter what I do I cant seem to memorize it, I dont have a good ear for it. so the freeband is the only thing I can do to experiment with radios, and shoot skip in the daytime. if the FCC wants to come I will gladly let them inspect my home.
the FCC should give a little spectrum to experimenters that like HF but dont want to learn morse code or just dont have the ability to do it. 500khz would be good enough

So? I have built quite a few amps, as well as other RF gear, for hams.
This person decided not to buy the amp, and last I spoke with him, he
was interested in getting his ticket. Just for your information, I
have never sold, built, or repaired any amp or transmitter unless the
money came with a copy of the ticket. I keep them on file, not only
for legal reasons, but for my own reference.

>well with your amp. Xtal freq set for 105.3 MHz.
>
>Sparky

That was from the previous post. Got a problem with quoting text?

>I might be interested in one of the Palomars. Heck, I might even key
>it up once in a while for a sentimental journey (I used to have a 300B
>a long time ago).
>
>Sparky, FLCD

True story. It was a darn good amp. I picked it up when I was a
teenager and interested in ham radio. It stayed at my Uncle's house --
he was a ham -- and we used it there. So are you still planning on

giving it away?

Response below:

--
Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

They have rights, just as you do. They have the right
to walk where they want on public streets, without being
harassed by vigilantes. If you suspect they are up to no good, call the
cops, that's their job not yours. Same with the crap
you have been spewing for months. Your a hypocrite of
the highest degree, so I would hope, you will come off that
high horse and try to have a civil discussion Frank, not
this preaching crap.

Smoker's Rights... and Wrongs
Last updated 11/17/00
See below for results from court on Nov. 17, 2000.
On 9/13/00, shortly after 9pm, I was pulled over by a police vehicle. The
officer notified me that I had tossed a cigarette out of the window and
cited me with a civil infraction penalty of $950 under Spokane Municipal
Code 10.08.010. Some readers might think that this is a good thing, but you
might want to read this anyway - it is a prime example of how just and
legitmate laws can be warped and convoluted to discriminate against anyone
at any time, even indirectly.

Is it $500 or $950?
The section of the SMC under which I was cited, 10.08.010, addresses litter
and rubbish. According to section G,

A violation of this section is a
1. class 3 civil infraction when a person litters in an amount less than
or equal to one cubic foot,
2. class 1 civil infraction when a person litters in an amount greater
than one cubic foot, or
3. class 1 civil infraction for which the maximum penalty and default
amount in five hundred dollars when a person discards a cigarette,
cigar, or other tobacco product capable of being lit.

I was cited under the third subsection. So what is wrong with this? To begin
with, this subsection excludes any other product "capable of being lit" from
this special penalty. It is directed only at tobacco, and therefore, users
of tobacco. Second, it makes no distinction whether or not the "tobacco
product" is actually lit. Under this law, any person that inadvertantly
drops a whole, unlit cigarette is subject to a fine of $500.

Update - 10/20/00
I discovered the reason for the disparity between the maximum fine of $500 and the citation's fine of $950. RCW 3.62.090 imposed a statutory assessment of 90% on any case that goes through the Public Safety Building, except for parking violations. Make no mistake, this is a tax! So why doesn't it have to obey other tax laws? Because it is called a statutory assessment. Hey, a rose by any other name . . .

The code directly references RCW 70.93.060, the state code from which it is supposed to be derived. This code states:

(4) It is a class 1 civil infraction as provided in RCW 7.80.120 for a person to discard, in violation of this section, a cigarette, cigar, or other tobacco product that is capable of starting a fire.

There is a clear distinction between this code and the SMC equivalent. "Capable of being lit" is very different from "capable of starting a fire". Without a doubt cigarettes are capable of being lit, but so are fields, forests, paper, wood, many plastics and chemicals, and other stuff I haven't even thought of. But in order for something to be capable of starting a fire it must have certian characteristics, and these are characteristics that unlit tobacco products do not have. So why only tobacco products?

The footnotes of RCW 70.93.060 reference RCW 76.04.455 under the forest protection laws.

Lighted material, etc. -- Receptacles in conveyances [vehicles].
(1) It is unlawful during the closed season for any person to throw away any lighted tobacco, cigars, cigarettes, matches, fireworks, charcoal, or other lighted material or to discharge any tracer or incendiary ammunition in any forest, brush, range, or grain areas.
(2)...

Well, by golly, here's the "other stuff I hadn't even thought of". There is no doubt as to the purpose of this law. It does not single-out tobacco users as criminals deserving of special penalties. So now I can see how the purpose of the law can begin with a very ernest and comprehensive statute and end up to be a law specifically aimed at smokers, although I still don't understand why (but I have my suspicions).

Now let's see how the Spokane Municipal Code contradicts itself.

SMC 01.02.010 - Interpretation of Code
A. Subject to specific definitions and rules of construction as are variously
provided in this code, words and phrases used in this code have meaning
in accordance with the following rules:
1. Terms are defined so as to give effect to the obvious legislative intent.
2. Particular words are construed in context so as to give meaning to

every
word used and to achieve consistency within the entire context.
3. Technical terms and jargon have such special meanings as are
generally
understood by practitioners in the field from custom and usage.
4. Terms used in laws adopted by reference carry over their meanings in
the
laws adopted.
5. Words are given common and ordinary meaning.

Subsection A.1. certainly doesn't apply, since there is no obvious legislative intent. If the intent were to prevent fire, the code would have included any other object or substance (not just tobacco) that is capable of starting a fire (not just capable of being lit). Subsection A.2. does not apply because the entire section is inconsistant with the "obvious legislative intent" of SMC 10.08, and that is public safety. If safety was the real issue, then the same argument that applies to A.1. also applies here. Subsection A.3. must refer to the word "lit", although I know quite a few people "capable of being lit". There is no other possible example in the section. Subsection A.4. does not apply since the phrase was reworded from "capable of starting a fire" in the RCW to "capable of being lit" in the SMC. This liberty has been taken with no apparent legal justification. Finally, subsection A.5. is the only applicable part, for common and ordinary reasons. Part G of 10.08.010 can only be legally interpreted to mean exactly what it says, although the intent of this code still remains a mystery.

On that note, I must mention that there are a couple things that happened that I didn't mention at the beginning of this page. First, the officer never went back to confirm that the alleged deposited object was a tobacco product. This should be required, since the law only applies to tobacco products. In fact, both parts of this law should be proven. Although the SMC allows proof based upon a preponderance of the evidence (as opposed to proof beyond a reasonable doubt), any officer would be negligent, at the very least, by not retrieving any form of substantial proof. This officer did not. SMC 01.05.030 and .040 define the procedure required by any officer faced with a possible code violation. This involves an investigation sufficient to determine if the code has, in fact, been violated. This officer did not do that.

This same code also requires that "the officer will first, as a matter of policy and discretion, attempt to secure voluntary correction ... before issuing a notice of violation or notice of infraction." This officer did not ask me to pick up the alleged deposited object at any time, before or after issuing the citation. Some actions are correctable, such as picking up litter. This is the obvious legislative intent of SMC 01.05.030 and .040. There was no "attempt to achieve voluntary correction", which is necessary before the officer may issue a notice of infraction.

Here is something interesting. Not only did the officer fail to ask me to go pick up the alleged deposited object, but he did not even bother to go back

to see if it had started a fire. If the intent of the law is to prevent fire, then shouldn't that be one of the concerns of the officers entrusted to enforce that law? It should not be suprising that if the intent of the law is clouded, then the intent of the person responsible to enforce that law should also be clouded. This is especially true as this incident took place in the same area which is notorious for prostitution, drug-dealing, and public intoxication. If public safety - i.e, fire - was not the priority of this officer, then what was?

Update - 11/17/00
This was the only issue addressed by the judge. All other arguments were ignored. The judge was not aware that this code even existed, and took him over ten minutes to look it up. In fact, I even had to write down the reference for him, and he still couldn't find it. Regardless, section (4) from the preamble (SMC 01.05.010) was pulled out of context and used to dismiss my argument, the judge saying that SMC 01.05.030 and .040 pertain only to "property violations". I have thirty days to appeal.

I intend to contest this infraction. The officer was negligent, and the law is bogus. I will probably lose due to one of several reasons, the most obvious of which is the "preponderance of evidence" clause. Regardless, if I don't stand up for my rights, I can't bitch anyone else out for not standing up for his or her rights.

Yeah, but I can see no difference between this law
being broken, anymore than FCC "rules" being
broken.

So all I'm saying Frank,.....
Don't spew that crap, when you are just as guilty.

Have you ever thought about changing the law instead of ignoring it?
How about getting in touch with a ham group, since you don't need a
license to operate someone else's station (within limits, of course)?
There is also a ham ticket that does not require morse code. However,
if there is a genuine learning disability with code, the FCC might be
able to grant a waiver (anybody know if anything like that is
possible?) Or, you could just understand that parapalegics should not
take up base-jumping and find another hobby.

I agree. I had my suspicions, I recorded the info, and after the crime
I reported it quickly enough to get them caught. As far as the
car-burglers are concerned, if I want to stand in my own yard next to
my truck with a big stick, that is my right.

> Same with the crap
>you have been spewing for months.

It's a far cry from being the same. If I want to sway interest away
from illegal behavior, that's my right. If I want to point out the
logical fallacies of any argument in support of radio piracy, that's
my right. If I want to shatter the credibility of criminals, that's my
right. If I want to verbally defend the legal rights and privileges of
responsible citizens, that's my right. And no matter what I do, as
long as it's legal, that's my right.

You, on the other hand, forfeit your rights when you break the law.
You do not have the legal right to operate illegally. You do not have
the legal right to promote illegal behavior. And you do not have the
legal or moral right to harass anyone that criticizes your illegal
behavior.

>Yeah, but I can see no difference between this law
>being broken, anymore than FCC "rules" being
>broken.

I guess you didn't hear that I won my appeal and my fine was reduced
to $25. I haven't paid much attention to my site lately, and records
available at the Spokane County Courthouse. This is a prime example of
how to legally change a law. Unfortunately, most people don't care.

I used to have a page about how our neighborhood legally fought a
crack house (next door to mine). Every morning the yards were full of
broken beer bottles, used condoms and bloody needles. The police
weren't much help. We ended up filing suit against the owner and won.
He appealed and we won. He filed bankruptcy, and although we lost
there, we still won because the nuisance is gone. This is an example
of how to use the law properly and effectively.

So you see, shark, you don't know half of what you are talking about, and the other half is bullshit. Now go play with your amps, schedule your cataract surgery, and wait for the FCC to come a knockin.

Yes your right there, you can stand in your "yard" with a big stick. The
minute you walk on to the street, you have left
the legality of the yard and now are no better than them, a

common thug.

> > Same with the crap

>
You still didn't get you're case dismissed, so there fore, you
were convicted of littering. You didn't get the law changed either, so don't
take credit where you don't have any.
Anybody can check on line at the courts web sight for that bit of nonsense.

> I used to have a page about how our neighborhood legally fought a
> crack house (next door to mine). Every morning the yards were full of

> there, we still won because the nuisance is gone. This is an example
> of how to use the law properly and effectively.

Yes, that's correct, that is the way to do it. But you still
can't go around calling the kettle black.....Especially
when your name is "Skillet"

> So you see, shark, you don't know half of what you are talking about,
> and the other half is bullshit. Now go play with your amps, schedule
> your cataract surgery, and wait for the FCC to come a knockin.

Again, your wrong Frank. I've exposed you for what you
are..... The person that sits at home, listening to
scanners. Runs out the door when he hears of a 415 just
a block away. Gets there, try's to direct traffic, tell the
officer about how he's keeping notes on neighbors, copying
license plates of Domino's delivery drivers. Logs every time
he here's someone operating out of band, sends it to the FCC.
But yet complains when he gets caught littering, exposed for building
and selling linears. By the way, didn't you know that it was "illegal" for
you to build linears, unless your a ham of course, but you have sworn a
dozen times that your not.
So again, "illegal", just like the ranting you do, "illegal"
Just to let you know again Frank, I don't even own an
antenna, either mobile or base, that's why I was going to donate a linear.
Notice the word donate, that means I was
not going to sell it for a profit, like you do when you build
those "illegal" amps for sale. So I'm sure the FCC would
look, see no visible signs of an antenna. Wait for me to
come home, no radio transmission out of this house.....
Later..... There gone with out any problems.
BECAUSE FRANK, I can't transmit without an antenna,
unless you've dreamed up of another way, let me know.

We always get a good laugh when illegals try and "zero in" on critics of illegal CB.

They cannot fathom that there might be more than one person in the NG that thinks illegal CB is stupid and pirate ops are criminals.

In the dim rescesses of the KeyClown mind, there is only ONE thorn in their side, and once he is gotten rid of, there will be joy in Mudville. (Sorry for the reference to classic poetry. Let's put it in terms you can understand) They think if they can just "get rid of" Doug....or "expose" Leland...or drive away Sparky, then the NG will be back to "normal", i.e., a haven for outlaw CB.

Wrong.

AntiKeyClowns are a multi-celled (Yes Dave, we are talking Cold War Commies! AYIII!) organization. Cut off the head and the body still functions.

So go for it, Landshark. Write to ISPs and demand the criticism of illegal CB stop. Write, write, write, till your little fingers hurt. We will be here....laughing!

We always get a good laugh when illegals try and "zero in" on critics of illegal CB.

They cannot fathom that there might be more than one person in the NG that thinks illegal CB is stupid and pirate ops are criminals.

In the dim rescesses of the KeyClown mind, there is only ONE thorn in their side, and once he is gotten rid of, there will be joy in Mudville. (Sorry for the reference to classic poetry. Let's put it in terms you can understand) They think if they can just "get rid of" Doug....or "expose" Leland...or drive away Sparky, then the NG will be back to "normal", i.e., a haven for outlaw CB.

Wrong.

Which is the best mobile CB transceiver available on the market today?
I am interested in a transceiver with FM-AM-SSB capability. My
preferences are, in order to priority:

1.- best possible FM-AM-SSB TX and RX performance
2.- reliability and quality
3.- easy to operate
4.- features

Thanks for your input.

Hey Landshark. If you aren't active on CB (as you have "proven" above) ...WHAT ARE YOU DOING HANGING OUT IN A CB NG????????

Bill, I think code waivers disappeared with the 5wpm Notice and Order. The
Volunteer Examiners must (and would do so anyway from my experience) make
every reasonable accomodation to physical handicap. Some of these
'accomodations' go to great lengths.

Want and can't are two different things. Want is not within my power.
Can't may be another story. I have some experience with teaching code and
that at 13 wpm. When you said 'memorize' you said a mouthful -- sounds like
your approach needs some work.

I might venture that your job (or major activity) requires doing the same
job both right and left-handed and that you are one of those (as am I) that
while right-handed do perform a number of things left-handed (dealing cards
and coffee-drinking come to mind). In these cases, the approach is all
important.

Use the e-mail and let's discuss this further.

The difference is that I expect the harassment from idiots like you.
Don't you get it by now? If you don't then you are dumber than a
brain-damaged cockroach. By all means, anyone that hasn't tossed both
of us into the killfile by now should go and read all the posts by

each of us. And you are still avoiding the point.

>You still didn't get you're case dismissed, so there fore, you
>were convicted of littering. You didn't get the law changed either, so don't
>take credit where you don't have any.

I didn't? There you go, acting like twistie again. I proved, in a
court of law, that the law was wrong. And you again ignored my point.

>Anybody can check on line at the courts web sight for that bit of nonsense.

Feel free to do so. These cases are usually not posted online, so
that's why I said the info can be accessed through the Spokane County
Courthouse. Do you need the address, or are you actually capable of
using a search engine?

>> I used to have a page about how our neighborhood legally fought a

>
>Again, your wrong Frank. I've exposed you for what you
>are..... The person that sits at home, listening to
>scanners.

oh brother, there goes your imagination again, I don't even own a
scanner anymore. I had one for three months and the thing made me
paranoid, so I gave it to a friend over a year ago. Now she is
paranoid. But that doesn't detract from the fact that you don't know
what the hell you are talking about. Actually, I think you do, but you
keep ignoring the facts a la twistie.

You have only exposed the truth. It seems that -your- truth is heavily
biased. I wouldn't expect anything less from a criminal mentality. The
good news is that any reasonable person can see through your bias. The
bad news is that you can't. But then, any reasonable person would
ignore both of our posts, which was my intention from the beginning
(Do you get it now? Or are you still too stupid?)

> Runs out the door when he hears of a 415 just
>a block away.

Hmmm..., there was a situation happening just three blocks away when I
was chasing down the car thieves. Some sort of hostage thing. I almost
bumped into a cop car set up as a road block. Still haven't got the
whole story from the press, but while you are busy making up more lies
you can probaby read about it on www. krem.com.

> Gets there, try's to direct traffic, tell the
>officer about how he's keeping notes on neighbors, copying
>license plates of Domino's delivery drivers.

Sorry, too busy chasing car thieves. You are too busy counting your
money to even know what's happening in your own neighborhood. That's
why you get ripped off and I don't. Count de Monet / Count da money.
Cool movie. "Pull .... Ka-Blam!" hehe...

> Logs every time
>he here's someone operating out of band, sends it to the FCC.

You sure do have a vivid imagination. I have never sent anything to
the FCC regarding anything in this ng. Have you ever thought about
taking a class in basic English composition? If you do, you might want
to sign up for 'Logic' and 'Effective Listening' as well. You
certainly failed 'Creative Writing'.

> But yet complains when he gets caught littering, exposed for building
>and selling linears.

Tell ya what: you contact that person and see if I sold him anything
at all. And you contact that FM pirate and see if I sold him anything
at all. And you get the records from the courthouse. And then we will
see just how much water your bs holds.

> By the way, didn't you know that it was "illegal" for
>you to build linears, unless your a ham of course, but you have sworn a
>dozen times that your not.

You are half correct -- I am not a ham. It is -not- illegal for me to
build any RF equipment, provided the recipient or I get it
certificated when necessary. But I guess you didn't know that, just
like you don't know most everything else you say.

>So again, "illegal", just like the ranting you do, "illegal"
> Just to let you know again Frank, I don't even own an
>antenna, either mobile or base, that's why I was going to donate a linear.

>look, see no visible signs of an antenna. Wait for me to
>come home, no radio transmission out of this house........
>Later.................. There gone with out any problems.
>BECAUSE FRANK, I can't transmit without an antenna,

>unless you've dreamed up of another way, let me know.

Save your spew. You don't have an argument. That's because you are grasping for any kind of lame excuse to salvage what's left of your ego. You don't even know what the hell you are talking about anymore.

So ignore my suggestion to shut up and feel free to post every argument you can think of, lame or not. Report others to their ISP, so that others will report you to your ISP for your history of harassment and your encouragement of illegal behavior. Respond to trolls as a troll. Defend your stand for radio piracy. Because your idiotic posts are the best argument against freebanding since twistie went bonkers.

And you will do just what I said. That's how well I know you, shark. You are as predictable as the sun coming up every morning. You will do exactly as I say because your ego commands you to do nothing else, even after I have told you so in this post. You may resist for a short time, but the urge will be too powerful, and you will have an overwhelming need to respond. And when you do you will show your true nature -- a drooling delta. Hehehe!!!

Waivers were only available for hgher speeds, but good golly, 5 wpm code is nothing. Anyone can memorize 10 numbers and 26 letters. Forget everything else. That's all you need to pass the test. Practice for15 minutes every day for a month and you can copy at 15 words per minute easily. I don't buy this crap about not being able to learn the code. What it really means is that they sat down one afternoon, took a look at it, and said this isn't going to fly, and turned off the tape.

it. so the freeband is the only thing I can do to experiment with >>radios,
and shoot skip in the daytime.

What can you do on "freeband"...?!?! Talk to other freebanders and hope
you don't get caught.....

What could you do with an Amatuer no-code (Technician) license, earned
after memorizing a few questions...?!?!

Talk to the International Space Station on 144Mhz (I worked MIR twice with
50W and a ground plane...do THAT on "freeband")

Work DX on 6Meters.

Moonbounce and satellites on VHF and UHF

FM repeaters on all VHF bands and several UHF bands

Remote bases (legal HF for no coders!) on 222mhz and above

Digital modes....also world wide, and with nothing more than a TNC and 2M
HT!

Fast Scan TV. (cheaper than most "decent" HF SSB stations in some cases)

Just takes a bit ot time and determination. Nothing of value doesn't.
And you don't have to learn the first letter of Morse Code if you don't want
to.

73 and come one up!

The FCC doesn't need a warrant to inspect your station. Once you key that mike for the first time you agree to all the rules and regulation of Part 95 which states that the FCC may, at any time, inspect your station...

• 95.426 (CB Rule 26) Do I have to make my CB station available for inspection?
(a) If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection.
(b) A CB station includes all of the radio equipment you use.

...so technically the FCC doesn't need to get a warrant.

Yes, it IS constitutional because you have already given the FCC permission to inspect your station by using your CB in the first place. If you do not agree with ALL of Part 95 then you have no business using your CB.

Yes, the FCC is constitutional. It is a part of the executive branch of our government, created by Congress and given rule-making powers. Yes it is constitutional.

Uncle Kruschev? I always knew Dave was a closet commie! ;)

:+> call it something like rec.radio.not.liscensed?

I didn't call the shots, since CB is worldwide, a "blanket" NG was
chartered to keep non-Amateur discussions from wasting bandwidth.

At first, having and using a Moderator was discussed, then dropped,
but a FAQ was posted monthly to allow new users to orient themselves
and reduce bandwidth for questions that could be answered in the FAQ.

I, myself, seeing the FAQ woefully inadequate for the new user,
generated the "how to buy a CB radio pages" that's oriented to help
people not in the know, or are very new to it, familiarize themselves
with CB.

:+>
:+> There are other newsgroups that illegal operators can use, such as
:+> alt.pirate.radio, alt.radio.pirate (yes, these are two seperate

:+> >the Super-8 hierarchy having chartered beginnings.
:+>
:+> And the CB was never intended to be a hobby, but that has changed as
:+> well. The fact remains, if it ain't legal, it ain't CB.

Well, you've just mentioned the alt groups, there are rules for
following, and developing, a charter to get into the Super-8
hierarchy. Alt groups are set up for non-chartered discussions. The
Alt groups were to allow local sites and servers to support the needs

of the alt.* users and were given a choice to either subscribe or not. The ISP and the GigaBytes needed to handle the Super-8 are a part of joining USENET, but ALT.* groups are an ISP's choice whether or not to post them [Child porn, Always Off-Line flamers, Virus experiments, Extremists] due to parental controls.

That is the key word, Parental Control. Some Adults seem to have lost the ability to obey, or control themselves. It answers the "why" to issues of TOS that are bouncing around in this NG. I don't want my kids to see derogatory and profanit-ized grammar when it comes to a simple CB, nor would I like to hear my neighbors cuss out another neighbors dog due to it's barking.

Pretty much anyone can create an Alt group. The Super-8 require authorization, petition, draft, outlines and general mayhem for discussion and then is put to a vote.

Perhaps this is more info than you need, but I'm also thinking of others that may read this thread and need to be brought up to speed.

Hi Frank, how's the paranoia?
I sleep well at night Frank, I don't have to worry about
my vehicles,. It's a 3 car garage, no antenna's, they fit in
without a problem. The house has an alarm, so I sleep well there too.
I don't need to carry around a weapon like you do, I'm
not paranoid., so that's out. I checked the crime stats at
the police dept before moving in, no paranoid vigilantes
in the neighborhood.
But there are really only a few words for you old boy...

Paranoid, delusional, HYPOCRITE! PLAIN & SIMPLE.

TTFN,

The Landshark
PS, for the others reading, please don't miss some of his
'Ramblings" that I have posted, quite telling on what kind
of person Frank is.

Best tool for the car.
Although not for a project, one of the best, simplest, and cheapest tools to keep in your car is a 3 to 4ft. length of fencing pipe. It can help break loose a stubborn lug nut, tighten a loose fan belt, adjust the attitudes of the passengers, hold doors or hatches open in a strong wind, check the depth of the pot hole you just blew a tire driving over (Spokane residents might need a longer pipe), or just use it as a walking stick. More uses than I can list or even think of.

Hi-Tech Crime: Your Home is Not Secure
The fact is, if a criminal wants something bad enough, he will find a way to get it, regardless of how many precautions you take. But there are some electronic devices that people take for granted, and these devices can provide useful information to the hi-tech criminal. This page was written to provide the average citizen with critical information about the use of modern electronic devices and how they can be used by criminals. It is not a lesson on how to commit a crime. The information is intended to prevent a crime from being committed against YOU!

Cordless Phones and Cell Phones
Probably the easiest way for a criminal to gain access to personal information about you is the cordless phone. Most cordless phone conversations can be received by small, inexpensive, portable scanners. These scanners are much more sensitive than the receiver on your cordless phone, and can receive some conversations up to several blocks away. With a larger antenna, phone conversations can be heard at a distance of nearly a mile.

What can a criminal gain by listening to your phone conversations? Any information that you happen to say about:

when you will be home or away;
where your children are or will be;
where you work;
what your plans are for the future;
who you care about;
what valuables are kept in your house;
where valuables are kept in your house;
how to access your house.

This is information that can be used by thieves, stalkers, rapists, child-abductors, or anyone else with criminal intent. But the information doesn't end there. By attaching the scanner to a cheap and simple device which decodes touch-tones (even an old computer will work), a criminal now has direct access to any touch-tone telephone service you use, including your bank account! (I recently discovered that some scanners have touch-tone decoders already built in!)

You don't have to say everything all in one conversation. You can inadvertantly provide bits and pieces of information in several conversations which the criminal can record and later assemble into usable information. Even if you talk about nothing at all, the criminal can log the times when you use your phone and determine a schedule of when your house is vacant, or he can determine when you are usually asleep so that you won't notice what he is planning to do next door.

The information gathered by criminals is not only information about you, but also about the person you are speaking with on the phone. If the person on the other end of the line doesn't know that you are using a cordless phone, they might say something about themselves which could cause them harm just because a criminal is listening to your phone.

Some cordless phones offer an encryption feature, especially with digital phones. Encryption is easily defeated when the technology for the encryption is known. If a cell-phone or cordless phone is mass-produced, and even if it is brand new, there is a very good chance that the method of encryption is already public knowledge. If not, it won't take long until someone figures out how to defeat this psuedo-security feature.

Everything said about cordless phones applies to cellular phones as well, except that the hardware is a little different. Cell-phone companies

practically give away phones, and they are frequently lost or stolen. It is a simple matter to modify a cell-phone to receive your conversations or use your account. Scanners sold in the past few years have been built so not to be able to receive the frequency range used by cell-phones. However, many older scanners are capable of receiving cell-phone frequencies. These older scanners, and newer scanners that have been modified to receive these frequencies, are frequently sold in pawn shops, on eBay, and through other venues.

How Do I Know if Someone's Listening?
The simple truth is, you don't. Many scanners are handheld and can use earphones or headphones. Scanners do not need a special antenna like those used for mobile phones, CB, or ham radios. Many scanners are mobile, and use the car's radio antenna. You can't tell if a car has a scanner installed or not. Your basic scanner listener might be that person you think is just sitting in a car, or it could be that person walking down the street with the headphones on. Or, they could be sitting in the house next door.

The most popular roof-top antenna for use with scanners is the discone, because of the wide range of frequencies it is able to receive. These antennas are expensive accessories, and few scanner owners ever bother to purchase them. Regardless, find out what one looks like (surf the net or look in the latest Radio Shack catalog), then drive around your neighborhood. If you find one, the chances that someone is listening to your phone conversation is better than not.

But don't get paranoid. Cordless phones and cell-phones have their place as a secondary phone, to be used only if necessary. The standard land-line should be used whenever possible. Just ask yourself, "Is the convenience worth the risk?" If it is, then don't complain that you weren't warned.

Other Electronic Devices
The following list is by no means comprehensive, but just a sample of devices that can be manipulated by a criminal.

Garage door openers;
Car alarms;
Pagers;
Wireless home security alarms;
Wireless security cameras;
Baby-room monitors!

Nearly any wireless or cordless device can be detected and/or manipulated by a hi-tech criminal. Any device which transmits information with radio waves or infrared light is part of their realm. Your stereo emits radio waves which can be used to determine what station you are listening to. Communication satellites can receive and relay transmissions from such low-power devices as a toy walkie-talkie. And the FCC publishes the specific frequencies used by most of these devices. Easy? You bet. Chances of it happening?
It has already happened.

Update: 08/28/00
Here's something new. Recently there has been a wave of car burglaries in my town. After talking to some victims I learned that little was stolen, if at all. And the cars were usually unlocked. So I stayed up for a couple weeks with a big stick. I saw a pattern where a lot of cars would get hit in a different area each night. One night during that two weeks was the night they hit my neighborhood, and one by one I chased off prowlers all night. Another observation was made when I decided to bring my scanner along for the night. Here's my conclusion:

This is organized, hi-tech burglary, and an example of things to come. A group of thieves will go out into an area for a night centered around a hi-tech watchdog (someone listening to a scanner and ready to page everyone if there is any police presence in the area). They are not after money, radios, or the usual pawnable items. In one case, there was money on the dash which was untouched, although the contents of the glove box were spread all over the seat. Instead they look for credit card numbers and bank receipts, or any information that they can use to rip you off. They steal the information.

This is a difficult crime to prosecute, because they only enter unlocked vehicles, and nothing of value is ever missing. As such, it is a non-bookable misdemeanor and easily dismissed with a simple excuse, such as, "I just got into the wrong car" or "I was just looking for a map to see where I was." Only the FCC can go after the watchdog, and only at great expense, so they don't.

A Primer on the Fourth Dimension
There have been many misconceptions as to the nature of the Fourth Dimension, including the ridiculous notion that the Fourth Dimension is time. This page is just to re-establish some basic concepts. It is not comprehensive in any respect.

First, a definition. The word object, as used throughout this page, refers to a geometrical figure. Geometry is a branch of mathematics, which is temporal. This means that geometrical objects have no substance, and are used for mathematical reference only. (If you have a better way to explain this, please let me know.)

The Starting Point

Dimension Zero has no height, width, or depth, and the only object possible is a point.

Dimension One, a line, has only length. An infinite number of points may be defined in this dimension. A line segment is bounded by two points.

Dimension Two, a plane, has length and width. An infinite number of points and lines may be defined in this dimension. A closed plane is bounded by at least three lines, which intersect at three points.

Dimension Three, a space, has length, width and depth. An infinite number of points, lines and planes can be defined in this dimension. A closed space is bounded by at least four planes, which intersect at six lines, and these lines intersect at four points.
If you are paying attention, you will see a pattern here. Without further elaboration,...

Dimension Four, a xenospace (for lack of a better term), has length, width, depth, and xeno. An infinite number of points, lines, planes and spaces may be defined in this dimension. A closed xenospace is bounded by at least five spaces, which intersect at ten planes, the planes intersecting at ten lines, the lines intersecting at five points.

This is a table of the simplest geometrical objects possible in each dimension. Each object is described in terms of it's construction using objects of smaller dimensions.

Dim. Object Points Lines Planes Spaces
0 Point 1
1 Line seg. 2 1
2 Triangle 3 3 1
3 Tetrahedron 4 6 4 1
4 Hyperhedron 5 10 10 5

The name 'Hyperhedron' is only a suggestion, and in this case it is defined as the simplest four-dimensional geometric object. Figure (a) is a two-dimensional representation of a hyperhedron. Figures (b), (c) and (d) show three of the five tetrahedra of which this object is constructed. The first thing you might notice is that some of the tetrahedra overlap in places, and some points of the hyperhedron are occupied by all five tetrahedra. This would seem to conflict with the law that no two objects may occupy the same point at the same time. No, this isn't justification that the nature of the Fourth Dimension is time: don't forget that this object is not material. If two lines intersect, there will be a point common to both lines. If two intersecting circles exist in a single plane, there will be points common to both circles. And geometry allows two spheres to pass through each other unscathed. But try passing a hammer through solid concrete (without breaking it, duh...). It doesn't happen because the law holds true. And it holds true for the fourth dimension as well. No two objects of matter may occupy the same point at the same time, regardless of the dimension.

The Hypersphere
One interesting aspect of the Fourth Dimension is its application to a circle. For instance, a line segment (1-dim), when rotated about on a point along its length (0-dim), results in the eventual occupation of a closed plane in the shape of a disc. The next step is to rotate the disc (2-dim) on the axis of its center line (1-dim), and it will occupy space in the shape of a sphere. The idea here is, when we rotate an object upon an axis that is one dimension less than the object, the object will occupy the space of one dimension greater than the object. Using this theory, we get a four dimensional object (hypersphere-?) if we rotate a sphere (3-dim) on the axis of a plane (2-dim). Not easy to visualize, and harder to draw, so I didn't.

You should see now that the Fourth Dimension is nothing more than a geometric frame of reference, just like all the other dimensions. It is not a doorway to multiple realities, time travel, or any other fantasy world. It is a tool that can be used to analyze and interpret this reality at this point in time. For more information on how to use this tool, I recommend a trip to the library to (hopefully) find a college textbook on non-euclidean geometry: i.e, the shortest distance between two points is not always a straight line.

Hi Doug, How's it going in
Chicago?
That's a fair question, though I don't see why
a ham operator, that admits he doesn't use a CB
is asking that type of question. Well here goes
Because.....
.....
.....
.....
.....
I want to, if that's ok with you though.

The Landshark

--
Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

None of what you mentioned is a quality amplifier. Spend the money on a good beam antenna because to get a good clean signal you are going to spend a lot more than what you expect.

I don't get a paycheck or a socialist's check, so I can't send one. IF 5070 is a "HellHole" of propaganda, then what IS your liberal newspaper from your BIG city? We KNOW it is mostly communist controlled! I just listen to Texe Marrs Sat. @ 8pm EDT or Sunday @ 10pm EDT on 5070 and that's it. I recommend ALL to get the audio of yesterday's tape @ www.texemarrs.com . It explains EXACTLY what I've been talking about in this post to Danaher. I typed all of these responses before listening to it Sun. PM. He talked about McVey and the brainwashing by the media and what they will do next! It was VERY INTERESTING to say the least. I think the tape will cost you $7, but ask Texe.
Dave!!!!

Depending on the kind / type you are looking for, you won't find FM on a "legal" CB radio. If it were like three years ago or more, and you were looking for a straight out CB, I'd suggest the Uniden Grant. I don't know what their new units are like. Probably not as good as the older units, as seems to be the trend with all the remake models. As for non-CB, I can't really suggest anything, as I haven't used very many of the models out there. I am happy with my Cobra DX+, but that's me... Others may not like it.. Opinions vary...

While wasting sometime between flipping
the food on the BBQ, I came across this.
The
Landshark
--
Prime Rib
Serves 8
2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one strip and
reserved
12 bay leaves
Salt and freshly ground black pepper, to taste 2 cups red wine
Preheat oven to 450 degrees F.
Process the garlic in a blender or a food processor fitted with a steel
blade to a puree. Add 1 teaspoon salt to the garlic and process to a
paste. Pat the garlic paste in an even layer over the top and sides of
the roast. Place the bay leaves evenly over the garlic.
Place the trimmed strip of fat over the garlic and bay leaves. Tie in
place with kitchen string. Sprinkle the roast all over with salt and
pepper. Place in a roasting pan; pour the red wine in the bottom of the
pan.
Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast about 18
minutes per pound for rare or 22 minutes per pound for medium done. Let
stand 5 minutes before carving.

Subject: Re: Fwd: Advice appreciated on quality brand/model CB radio

Thanks so much for your advice. A lot of what you said I didn't
understand in the slightest because I'm so new at this, but I'm keeping
all the great advice I got so that I can reread as I start learning.
Doug Adair lived with
me here in the Chicago area for a few months a couple of years ago, so
the local ham scene is something I don't really want to get involved
with, tho I don't know if he's still in the area or not. I always
enjoyed my father's CB
when I was a kid; thought it would be fun to start up again.
Thanks again for the advice!
Maggie

It finally appears more than a few are aware of this "game" taking
place now. This was posted on the group, but I wasn't sure what to make
of it then. Now I realize what took place. Here is the "Professor"
confirming it. He screwed up here. He was hitting me with so many alias
emails this day that after accidentally sending this one to ME, his page
disappeared and so did his email addy. Seems like he was trying to play
both sides of the fence and instigate the hell out of disagreeing
factions. Chi town indeed.

2516. LOOKING FOR SM-5104 PLL CHIP

I have to agree with Scott on this one (scary!)
The times that I have listened to 5070 have been like listening to a religious version of the National Enquirer. These shows are one-sided sensations of reality with very little reality. These are the guys that made millions off of Y2K at the expense of their listeners.

Kevin, WB5RUE
Televangelists are the Pro-Wrestlers of religion -- mostly faked and choreographed.

yeah i know i see the point but newsranger is just a service for newsgroups...not sure about mail though....but ISPs won't really do anything unless a whole group of people complain..they aren't going to do much of anything if the same 2 or 3 people send a shitload of complaints and examples...obviously people have been complaining and he's still here.

Thanks Moparguy!
I'm not one to pull punches nor would I ever back down to these loudmouth cry-babies. Sure there are plenty of the same opinion as me and while I don't mind hearing from people like you, that is not the reason I post the way I do. Call me rude, brash, obnoxious, opinionated....
Whatever you like! I'm not going to change the way I feel about radio just because of a few dweebs who actually figured out how to post to a news group.
Train

And therein lies part of their problem. Since their entire lives evolve around concern of how they are perceived on this ng, (repeated references about "the group", numerous concerns about "ego", "everyone here", "we", etc., etc.,) they automatically assume that all others share their social acceptance deficiency and think like they do. Comprehending that some don't care at all what others think or feel is way beyond their grasping capability and too much to ask of them. Doug heard voices (on his local repeater frequencies?) and believes he is some type of cb martyr, and the way his Walter Mitty compadre fancies himself, well, he is a rad shack radio legend in his own mind, don't ya' know?

truth@planetc.com (Dave or Debby)
How about some SHARK recipies...

This is the bomb, good enough to broadcast on the freeband frequencies

1 tablespoon vegetable oil
1 medium nion, diced
2 tablespoons curry powder, or to taste
2 and one half cups chopped peeled fresh or drained canned tomatoes
1 teaspoon salt, or to taste
1 quarter teaspoon frshly ground pepper
1 and a half pounds Blacktip or other shark steaks
2 cups hot cooked rice
garnishes (favorites around here are mango chutney, shredded coconut,
sliced banana fried in butter or oil, peanuts, chopped, fried green
onions, green bell pepper, papaya cubes or carambola slices in lime
juice with just a tad of honey)

Heat oil in large skillet
add onion cook till tender not browned
stir in curry poweder saute for about 30 secs
add tomatoes, salt, and pepper.
bring to boil
gently lower filets into sauce
cover pan
lower heat and simmer SLOWLY for about 12 mins
baste with the hot sauce two or three times while cooking
serve shark and sauce with rice and condiments added as desired

Awesome

Pretty good. I went and checked on it this morning, fed it, cleaned
it's cage...

Thanks for posting my site, but you forgot to post the URL:

www.cet.com/~sparky

It also has a few pages for CB radio, including the -proper- way to
tune up an antenna (not using a SWR meter). It also has some
easy-to-build test equipment that is almost essential for anyone
working with RF, and plans for a simple vertical dipole. Some other
stuff can be found there as well.

Thanks again, shark.

They disobey the laws until they are caught and prosecuted. You don;t need to be a police officer to give someone a traffic ticket, does that mean you are a vigilante if you do so? Someone robs a store, steals a purse from grandma, does that mean we all have to standby waiting for "The Proper Authorities" to chase the bad guys or can we do it ourselves? The reason people break rules is because there is no one there to enforce the rule if there was I can guarantee, you will obey the rules, especially if you face a fine, imprisonment or both. It is called taking chances some are more willing to take a chance than others. I know the gentleman in Delaware who was recently busted by the FCC, he took a chance everytime he keyed up,yes he got caught and ignored the FCCs warning letters, he kept taking a chance and keyed up again this time it landed him a 17,000 fine. Think he will ever talk on a CB again. His wife says NO! I believe her. She knows the FCC is for real. Maybe others will find out the hard way, the smart ones already have.

How about some SHARK recipies...

What is it, Capn or Tenille? Gender confused in PA? No wonder you objected to Dogie getting keyed on again. Or are you in that filthy little New Jersey hole you call a town? In any event, I believe replying to a topic, especially a question asked, is permissable. Besides, it wasn't about a shark recipe at all. It was a code about mods to a radio that you can never comprehend. But since you were so nosy and must involve your beak, I figured I would do the correct thing and respond to your post. Please try to stay relevant. Now, I again ask, what information is Adair privy to concerning a skywave amp at an alleged 110 watts that doesn't modulate? Did he share any info about this with you, Captain Tennile?

>Authorities" to chase the bad guys or can we do it ourselves?

In my state only an LE can enforce municipal code, but a citizen's
arrest is permitted under certain circumstances. Many cities have
programs for 'Community Oriented Policing', called C.O.P. shops. There
is one a few blocks away from me that I have worked with. It is a good
program, but it is not intended to replace proper law enforcement.

> The reason
>people break rules is because there is no one there to enforce the rule if
>there was I can guarantee, you will obey the rules, especially if you face a

>willing to take a chance than others.

There is a school of thought that says a law is not a law unless it is
enforced. The Supreme Court quickly dismissed that argument.

> I know the gentleman in Delaware who
>was recently busted by the FCC, he took a chance everytime he keyed up,yes
>he got caught and ignored the FCCs warning letters, he kept taking a chance
>and keyed up again this time it landed him a 17,000 fine. Think he will ever
>talk on a CB again. His wife says NO! I believe her. She knows the FCC is
>for real. Maybe others will find out the hard way, the smart ones already
>have.

You bring up a good point -- some people don't understand the reality
of legal consequences until they experience them firsthand.

==========
Sure Sparky, we don't/can't actually arrest people but we can, detain, gather evidance and help the Leo's do there jobs easier, so they can make the actual arrest. The arrest is the formality. You see a guy swerving back and forth across the whiteline on the highway we don't try to pull him over you either follow him if safe while you use a cell phone and call the police. You don't need to be the one performing the roadside stop and placing them under arrest. You just need to document the crime , gather any evidance and provide it when the case goes to court none of this requires you to be a law enforcement officer. I remember a case shown on Cop's or Court TV, there was a fella, I think he was from Florida, who for about 2 years liked to open his front door with his pants around his ankles, stand near the windows nude and pull his pud in front of a female neighbor, she complained to the police many times a week. They told her they couldnt do anything that they need proof to be able to proscecute the man, So what did she do she video taped the man whacking his struedel, she then went to the police with the "proof" (they) then arrested the man. Was she a police officer? hell no! was she a vigilante Hell No! Was she a ordinary citizen hell Yes! Did the guy get arrested and convicted. Hell Yeah! So you don't need a badge to "uphold " the law.
Even tho marijuana is smoked by many many millions of people daily, If you get caught with it still is a crime. I guess the illegal op's feel the same way.

>
> You bring up a good point -- some people don't understand the reality
> of legal consequences until they experience them firsthand.
==========
I can bet you this Sparky, someone gets busted in there area they will be on there best behavior, because they don't want to be next. Remember ExportsRus, you don't see many guys selling amps out in the open like they did before he got whacked. There will always be amps and other illegal gear just like before the internet. Many people took advantage of the internet in marketing new amps with fancy web pages and fancy distributors.

Palomar,Texas Star, Davemade, Shooting Star, Boomer etc I know i may have missed a few but basically they were out and selling long before the internet craze. And if it wasn't for the internet these would have never made the grade before, noname, xforce, storm, skywave etc. they got there exposure and start almost directly from the internet. I think it is this blatant outright flaunting that will get those in trouble with the FCC, just like the guy yanking his crank got busted.

You are getting quite evasive and off topic, Adair. The only mystery is you dodging the question of what you claimed to know so much about, the skywave amp that allegedly does 110 watts but fails to modulate. Can you show us a picture of it, Dogie? Where did the heat sink come from? You have answers, tubby, and a legion of possible skywave amp devotees await your intimate knowledge concerning this great invention. You did imply you have intimate knowledge concerning this piece of equipment, did you not?

Actually, IF I flunked, that would be a + on my side now, because I'd probably be richer! No, I gadeeated from HI School, but since my teachers were probably of the NEA teachers union, I am dumber than my olders, since the goal of the NEA is to make US dumber so we will accept Socialism!!!! Dey bin doing dat since da 1840's ! Sunny, I went past high school a bit, and when I started reading the KJV Bible, my learning & understanding increased 100 fold!!!!! Now I AM wiser than my teachers, other than the few that WERE Christians!!!
Dave!!!!!!!!!!!!!!!!!!

Hello Jack and happy Fishing,
Yes you are correct in some ways.... If you
witness a crime, in most states you have the right
to make a citizen arrest. On the other hand, since
speeding is only a violation of the vehicle code,
(which isn't even a misdemeanor)
I don't believe you can do a citizen arrest. The
violation must be made in front of an officer in
most states.
Yes you are right about paying the fine or doing
time, but again you have to get caught before you
might think about doing it again. I know of a guy in
the SF bay area that was running 36 kw out of his
home. Now that wasn't so bad, but when he was
interfering with the local public tv, whew! $32,000.00
fine.
Some other people have said and I agree, while it
is illegal, and if caught you will pay, as long as you
are not bothering your neighbors, getting complaints
from locals, using the ham bands, most of the time
the FCC will leave you alone.

The Landshark

--
Prime Rib
Serves 8

2 heads garlic, cloves peeled
1 teaspoon salt
1 standing rib roast of beef (6-1/2 pounds) fat trimmed in one
strip and reserved

12 bay leaves
Salt and freshly ground black pepper, to taste
2 cups red wine

Preheat oven to 450 degrees F.

Process the garlic in a blender or a food processor fitted with a
steel blade to a puree. Add 1 teaspoon salt to the garlic and
process to a paste. Pat the garlic paste in an even layer over
the top and sides of the roast. Place the bay leaves evenly over
the garlic.

Place the trimmed strip of fat over the garlic and bay leaves.
Tie in place with kitchen string. Sprinkle the roast all over with
salt and pepper. Place in a roasting pan; pour the red wine in
the bottom of the pan.

Roast for 20 minutes. Reduce the heat to 350 degrees F. Roast
about 18 minutes per pound for rare or 22 minutes per pound for
medium done. Let stand 5 minutes before carving.

The Landshark

New Recipe!

Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

So? I have built quite a few amps, as well as other RF gear, for hams.
This person decided not to buy the amp, and last I spoke with him, he
was interested in getting his ticket. Just for your information, I
have never sold, built, or repaired any amp or transmitter unless the
money came with a copy of the ticket. I keep them on file, not only
for legal reasons, but for my own reference.

>well with your amp. Xtal freq set for 105.3 MHz.

>a long time ago).
>
>Sparky, FLCD

True story. It was a darn good amp. I picked it up when I was a
teenager and interested in ham radio. It stayed at my Uncle's house --
he was a ham -- and we used it there. So are you still planning on
giving it away?

Again you are ignoring my posts -- I said before that it is perfectly
legal for anyone to build an RF transmitter provided it complies with
regs and is certificated. Don't you remember? If you don't then you
have a very selective memory. That's ok, I'll just remind you every
time you forget.

Response Below:

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

Hi Frank,
Still warping words in your direction again I see.............

Type what you want, you posted an offer to build and
sell an amp "Legally or Illegally" it didn't matter to those facts in your
post.
So as you have said in a post previous to me "Don't
try to worm your way out of this one" You posted it, so
as with everything else you have posted (You say) It must
be and is true.
I guess I can say, Hah, I was just kidding on those previous posts,
don't believe me, well if that's the case,
I don't believe you here.

Thanks for the input. I know that FM is not legal in US, but I am
located in Europe and here FM, AM and SSB are all legal. By the way,
I think the Uniden Grant was made by President in France and marketed
in Europe as President Grant. President CB radios are widely
available across Europe and their top-of-the-line model now is
President George. They also make the President Lincoln (which is also
sold in US under the Uniden badge).

>> >Sparky, FLRC
>>
>
> Hi Frank,
>Still warping words in your direction again I see.............

Not at all. Look at my posts before and after that post. It kind of
stands out like a sore thumb, huh? Totally opposite of all my other
posts. Do you have an explanation for that, shark? Could it be that I
thought that since this guy showed an appreciation for quality
electronics that I might be able to convince him to make his hobby
legitimate? No, I don't suppose you would think that way, regardless
of the facts.

And why no response to the FM modulator? I still have it, but it is
being used right now. A local nightclub is using it to broadcast their
band live to people driving by. A great way to advertise, and at only
50mW, perfectly legal. Hmm....

Or the Palomar? Did you forget that anybody can use a ham station
under the supervision of the licensee? The unlicensed operator can
even use his own equipment if he brings it to the station. Shocking
revalation for you, I'm sure. Even more shocking is the fact that any
ham can stop by and operate any equipment I may have. Wow! But here's
the biggie -- are you sitting down? -- I own a dummy load!!!! Several
of them, in fact. By golly, with the right dummy load I can operate
any doggone thing I want provided it doesn't radiate!

> Type what you want, you posted an offer to build and
>sell an amp "Legally or Illegally" it didn't matter to those facts in your
>post.

Unless you are totally stupid, you should be able to see that I never intended to sell anyone anything illegal. Either that or I am the worst salesman on Earth. Or, maybe, you are just totally stupid...

> So as you have said in a post previous to me "Don't
>try to worm your way out of this one" You posted it, so
>as with everything else you have posted (You say) It must
>be and is true.

Worm my way out? You mean like complaining about other's profanity, but defending your own words as "colorful metaphors"? Like breaking the TOS of your own ISP for years by promoting illegal behavior and posting off topic, and then suddenly changing your tune when the heat is on you? Like saying that I couldn't confront anyone face to face, but you back down like a yellow-dog when I accept your challenge? Or how about like when you keep adding words to change the meanings of my posts? Or how about totally ignoring anything anyone else writes that you can't refute? How about accusing me of selling illegal amps when none have been sold? Or of running power when I was operating legally under my uncle's supervision? (Do you remember the part about how it brought back memories?) And then you call me a vigilante just because I stand up for my rights, but call me a hypocrite when I prove you wrong? Do you mean like posting my website saying it is the ravings of a lunatic, and when that backfires in your face you call me a hypocrite once again?

What's next, shark? How are you going to 'worm' your way out of this? Just keep on calling me a hypocrite without any reason other than your own bias?

> I guess I can say, Hah, I was just kidding on those previous posts,
>don't believe me, well if that's the case,
>I don't believe you here.

I'm not suprised. By now, no reasonable person would be suprised if you said you could sprout fins and swim the continental divide.

Most amps that you will see are designed for the 10/11m market, but work (more or less) on most of the HF spectrum. They are wideband amplifiers, and are labeled and marketed as such so as to circumvent the law. The problem is that the design that makes them work on such a wide bandwidth without tuning is the same design that makes them splatter into your neighbor's TV and FM radio. They show this characteristic (harmonics) despite the claims by the manufacterers that they don't. Low-pass filters help, but most only help marginally.

So the trade-off is either to use a clean amp that is clearly illegal, or use a dirty amp and hope the FCC buys the story that you are just holding it for a hammie friend. Theoretically speaking, of course.

Just for the sake of being "purely educational", please check out www.fcc.gov and www.rainreport.com to study the consequences from the practical application of this 'educational' information. Also, anyone working with RF equipment should educate themselves about Radio Frequency Radiation. OSHA's site describes it's effects on the human body, such as cataracts and sterility. All very informative.

Landshark, I see I have left you speechless because your reply is pretty lame. For starters You don't get arrested for speeding you receive a citation/ticket/summons. And If I go to my local or where violation occurred police dept you sign a "complaint" against the individual, no one is arrested. I must then prove in a court of law that you were speeding just like the Leo's have to do It doesn't have to be in front of anyone, and since you bring this up. Please show me the statutes from any state that says It must be in front of a police officer, because if that was the case why not have the police arrest the person.Nice try Lame excuse. But in keeping with Cb radio, you can be turned in by anyone. And the FCC will do there job afterwards. Yes,they will leave you alone if you are illegal and unknown to them. The minute your illegal ass bothers someone they will know who you are.

hi

sorry i posted in some expired thread, i must have hit "reply" instead of
"new message"
my bad.

thanks for the intelligent bipartisan reply too

maybe i can trouble you with another question

i recently purchased off of ebay a little sonar model E, i kinda wanted to
go
retro, and on the back panel, there is a 8 pin circular female plug
recepticle
labeled "SONAR CALL" any idea what the heck that is??? unit works great
but i didnt get a manual with it ... ive been doing google/ask jeeves
searches,
but mostly only come up with pictures

thanks in advance

kev.

Hypocrite Answer #1 You do Not Matter.

>
>My quite the header reader arent you,

"Have to be with trolls like you and your girthfriend N8 you just ran to
defend."
==========
Why do you have to read the header are you paranoid ? I don't get it what
the hell does that have to do with the posted info. Who cares who it comes
from except maybe you

"Doesn't matter. You're in a hole and can't get out."

Thats ok your in a asshole and can't get out, guess were even.

"Uh, I guess it would be by purposely running to N8s defense unless you
agree with his method."

I did'nt run to anyones defense, Paranoid again Twistie? I certainly don't
agree with your method.

"I did and you interjected."
==========
Sorta like you do in others posts

"Oh, so now I am a hypocrite? Your trolls are right there along with
Adair's and company. You lose."

No, No ,No you have always been a hypocrite Twisite, You are as big a troll
as anyone Troll Boy. p.s I didnt lose shit you, but you have lost your mind.
Hypocrite Answer #2

"And directed at an individual, not you. You chose to embellish your
troll, now open wide."

Posted in a public forum open to all Just like you twisite.
Hypocrite Answer #3 Its ok for twisite to reply when not spoken to but don't try this yourself or you are a troll/

"Good God no, man. I want to know nothing about your private liasons with Adair. You interjected on a question to Adair, I figured you had something constructive to add. You don't."
==========
Then why are you asking questions, I thought I didnt matter.
Hypocrite Answer #4

"Deal with it."
==========
I say the same to you deal with but it is proven you cant deal with it you cross eyed bastard. btw, I took your fishing picture down to the local zoo. The primates really love it it is a natural laxative for them.

"You need to pay attention. You do not matter."
==========
I must matter

"Because you say so? You have never said anything radio related here
ever that amounted to a hill of beans. A new gender confused nic and
you have merit because you claim it? Hehehe! You couldn't claim
continence let alone anything radio related or anything that anyone
would even consider of remote interest to the hobby, and a hobby it is,
deal with it, Mr. Mom. I guess you couldn't read the words, so I will
reiterate, your trolls are all over the group right along side Adair's.
No, you don't matter, it is just that affliction that doesn;t allow you
to comprehend things. Somewhere, someone mistakenly told you the world
revolves around you. Have you been taking Leland lessons? So, again, you
don't matter. I just like embarassing children like you that self
project and openly support Dogie spamming the group with his homo
ramblings and rants whenever he arrives at the conclusion that he is
helpless against the cbers. Once again, pay attention. You do not
matter, despite what Adair whispers in your ear."

since you asked me a question

"After you interjected your Dogie loving beak into a radio related question that was directed at another, yep, I sure did, and you are incapable of providing an answer, so you resort to Dogie status and call names. Hard for you genderbenders to stay on topic, eh? Were you the one living with Adair when the only girl he ever had left him for a cber? You have reason to be proud, as a Dogie supporter."

and you still are replying

"The subconscious that is responsible for you choosing a unisex nic is also responsible for you not getting it. Again, your social acceptance disability prevails. There is a difference between embarassing someone of your challenged intellect and replying to one. I do not expect you to figure it out, after all, you are one of the ones who have an acceptance problem that can't get over the fact that no one cares that you are a cheerleader for the cb intimidated."

to me Hypocrite Answer #1 You do Not Matter.
My quite the header reader arent you,

"You still haven't answered the question about the alleged skywave amp that can't modualate at 110 watts. Obviously, you know nothing about any radios or amps and would rather change the subject to one that is not relevant, such as your private with Adair, (shudder) which you for some reason felt the need to share with the ng, which is why the original question wasn't directed at you, because you don't have the capacity to answer anything technically related, let alone field questions about radio and amps. Bye bye. :)"

2597. Landshark stands Proud!

Newsgroup: rec.radio.cb
Date: 2001-05-22 14:44:48 UTC
From: The Landshark <Landshark@TheLandshark.Com>
Message-ID: <uRuO6.1238$EM6.423001@news.pacbell.net>
Source record: 82997

Quick Response Below:

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

> even use his own equipment if he brings it to the station. Shocking
> revalation for you, I'm sure. Even more shocking is the fact that any
> ham can stop by and operate any equipment I may have.

All of a sudden lot's of excuse's to why you we're
operating illegally, Frank, you know you're wrong
admit it. By the way, the Palomar is not type accepted
for use on 10 meters, that's illegal. It might work
in Spokane Municipal Court, but I doubt the FCC would
even let you drag it on like you did when you were convicted
of breaking the littering law.

> the biggie -- are you sitting down? -- I own a dummy load!!!! Several
> of them, in fact. By golly, with the right dummy load I can operate
> any doggone thing I want provided it doesn't radiate!
>

> >sell an amp "Legally or Illegally" it didn't matter to those facts in
your
> >post.
> Worm my way out? You mean like complaining about other's profanity,
> but defending your own words as "colorful metaphors"? Like breaking
> the TOS of your own ISP for years by promoting illegal behavior

Oh, now this is Good, He offers to build and sell an amp
and I'm promoting "illegal" behavior. Boy, I'll tell you, I
never offered to build and sell an amp to anyone at least.
Way to Go Frank, Go Frank Go!

>and
> posting off topic, and then suddenly changing your tune when the heat
> is on you? Like saying that I couldn't confront anyone face to face,
> but you back down like a yellow-dog when I accept your challenge? Or

What, waste airfare to go to Spokane, park out in front of your house, light
a cigar, have you confront me with a pipe
or a stick, hit me, assault me because I parked in front.
Spend time in that rain hole just to see you in court, again!
No thanks, you are not worth the time. But come on
over to my house I'll invite you in, offer you a free meal,
give you some sound advice on life, and how to live to your fullest.

> How about accusing me of selling illegal amps when
> none have been sold? Or of running power when I was >operating legally

I don't know that, you are now, only after I posted the
fact that you admitted to doing those things.

> but call me a hypocrite when I prove you
> wrong?

I have proved you to be a hypocrite, you are now trying to
do damage control.

> citation/ticket/summons.

Correct

>And If I go to my local or where violation occurred
> police dept you sign a "complaint" against the individual, no >one is
arrested.

If you don't mind what state are you in? NJ or PA? In my state you can not
do that. That's why I said in in most states, not all.

> I must then prove in a court of law that you were speeding just
> like the Leo's have to do It doesn't have to be in front of anyone, and
> since you bring this up. Please show me the statutes from any state that
> says It must be in front of a police officer, because if that was the case
> why not have the police arrest the person.Nice try Lame >excuse.

It wasn't a lame excuse, you do not live in every state in the union, do
you? Laws are different each state, county, city
so please don't claim to be a 50 state expert. Yes you
know your local law, that's great, but in my state it is
not applicable. So when I explained that, it was local
for me , not you.
I can go on for hours on speeding, since where I live you
can not make a citizen arrest for speeding, (paid & talked with 2 different
lawyers) I petitioned for speed bumps in my neighborhood. It was the only
way to reduce the speed
of traffic down my street.

>But in
> keeping with Cb radio, you can be turned in by anyone. And the FCC will do
> there job afterwards. Yes,they will leave you alone if you are illegal and

It's nice to see those ignorant to the "international" aspect of 11
meters get their fingers politely smacked. I have a President Lincoln
and I must tell you that the Uniden based transceivers ar far less
susceptible to thermal drift than their RCI counterparts. I think
you'd be quite pleased. Good luck.

now it basically SUCKS!!!!!!!
Some dorks just had to ruin it for everyone because of the ways certain people run their equipment.
IMHO it is entirely up to the iduvidual if they want to run legal or otherwise.
Just like if you decide to drive 65 MPH or 80 MPH.
It is all up the the person weather they want to to by the laws or not. Just because one person runs a few watts or drives a few MPH over the supposedly legal limit does not mean necessarily he/she is gay, evil, or a hardened criminal.
This post is not meant to flame or harass but this is all just one mans humble opinon...

"You can control peoples actions but you cannot control their minds"

You are aware of course that the FCC monitoring and enforcement office is on
the west side of the Detroit area. I doubt that any so called "security"
will stop them from showing up, invited or not, if they so choose. 8->>

Most amps that you will see are designed for the 10/11m market, but
work (more or less) on most of the HF spectrum. They are wideband
amplifiers, and are labeled and marketed as such so as to circumvent
the law. The problem is that the design that makes them work on such a
wide bandwidth without tuning is the same design that makes them
splatter into your neighbor's TV and FM radio. They show this
characteristic (harmonics) despite the claims by the manufacterers
that they don't. Low-pass filters help, but most only help marginally.

So the trade-off is either to use a clean amp that is clearly illegal,
or use a dirty amp and hope the FCC buys the story that you are just
holding it for a hammie friend. Theoretically speaking, of course.

Just for the sake of being "purely educational", please check out
www.fcc.gov and www.rainreport.com to study the consequences from the
practical application of this 'educational' information. Also, anyone
working with RF equipment should educate themselves about Radio
Frequency Radiation. OSHA's site describes it's effects on the human
body, such as cataracts and sterility. All very informative.

Thanks for the input. I know that FM is not legal in US, but I am
located in Europe and here FM, AM and SSB are all legal. By the way, I
think the Uniden Grant was made by President in France and marketed in
Europe as President Grant. President CB radios are widely available
across Europe and their top-of-the-line model now is President George.
They also make the President Lincoln (which is also sold in US under the
Uniden badge).

You will probably need to search the Sam's manuals to find that info.
Be careful, tho, the tube-type models usually have plate voltage
running through those plugs.

See below.
.
>> thought that since this guy showed an appreciation for quality
>> electronics that I might be able to convince him to make his hobby
>
>Nice try Frank, fact's are facts! You offered to build
>him an amp, "Illegally"

I made the offer sufficiently unappealing for him to accept. Even you,
proud owner of more than a dozen amps, wouldn't have accepted my offer
of $4/watt. Actually, if he had accepted it, I probably would have
built him an amp for that price -- I may be legal, but I'm not an
idiot. But it would still need to be certificated.

>> And why no response to the FM modulator? I still have it, but it is
>> being used right now. A local nightclub is using it to broadcast their
>> band live to people driving by. A great way to advertise, and at only
>> 50mW, perfectly legal. Hmm....

Still no response, huh?

>> ham can stop by and operate any equipment I may have.
>
>All of a sudden lot's of excuse's to why you we're
>operating illegally,

It is not an excuse because I wasn't operating illegally. Is this too
complicated for you to understand? In case you don't know, I have a
part-time radio shop. When I test ham equipment it is into the dummy

load. If the customer want's to show me what's wrong with something by operating it, he can. It's my job. I also have a full-time job in the field of radio. I have always worked with RF and electronics. Do you really think that I don't know what's legal or illegal? Do you think that I would jeopordize my career for a quick illegal buck? You might, but not me.

> Frank, you know you're wrong
>admit it.

Is that the best response you can think of? You may not be able to understand reverse psychology, but once in a while it works. And it's too bad that you don't understand contractions, either.

> By the way, the Palomar is not type accepted
>for use on 10 meters, that's illegal.

Adding words again -- who said anything about 10 meters? Or type-accepted?

> It might work
>in Spokane Municipal Court, but I doubt the FCC would
>even let you drag it on like you did when you were convicted
>of breaking the littering law.

When all else fails, toss everything in a pot, mix thoroghly, and you might just end up with something palattable. Just not in this case.

>> the biggie -- are you sitting down? -- I own a dummy load!!!! Several
>> of them, in fact. By golly, with the right dummy load I can operate

>never offered to build and sell an amp to anyone at least.

No, that's one thing I don't suppose you have ever done, or probably ever could do.

>>and
>> posting off topic, and then suddenly changing your tune when the heat
>> is on you? Like saying that I couldn't confront anyone face to face,
>> but you back down like a yellow-dog when I accept your challenge? Or
>
>What, waste airfare to go to Spokane, park out in front of your house, light
>a cigar, have you confront me with a pipe

>or a stick, hit me, assault me because I parked in front.

Adding more words again. Hit? Assault? And where did you get the idea
that I think anyone that parks in front of my house is doing something
wrong? Teddy R. was a great man, and you are not. I would much rather
take his advice and not yours.

>Spend time in that rain hole just to see you in court, again!

I guess your geography is just as weak as your logic, psychology,
reading comprehension, creative writing, English, and grammer. Spokane
is in the Eastern third of the state, and is a semi-arid climate. The
center third is desert. You are 300 miles and one mountain range off
the mark. (People in Seattle don't 'tan' -- they 'rust'.)

>No thanks, you are not worth the time. But come on
>over to my house I'll invite you in, offer you a free meal,

>
>I don't know that, you are now, only after I posted the
>fact that you admitted to doing those things.

That's right, shark, you don't know, and that just about sums it up.
But you could have gotten a clue by reading things in context instead
of pulling out only what you want to read, and then considering that
what you read may only be a small part of the the reality not made
public.

>> but call me a hypocrite when I prove you
>> wrong?
>
>I have proved you to be a hypocrite, you are now trying to
>do damage control.

Your definition of 'proof' is just as loose as twistie's. If I used
your standard of proof I can prove that you get turned on by licking
shower residue. Yes, shark, stand proud of your ability to turn a
worthless argument into..., well..., another worthless argument.

Your repetitive and groundless accusations are becoming very boring.
At least -try- to find some new material, maybe something that has
some foundation in reality and not your biased imagination. Or at
least get more creative with your attacks. How about some "colorful
metaphors"?

hummn,

well, not really private, right, like it doesnt encrypt, more like caller id, where its only gonna receive when the proper tone unlocks the squelch??

well, symantics aside, very useful information, thanks, i will have to keep an eye out on ebay and see if one ever pops up

thanks

kev.

Kevin.

The socket is for a selective-calling accessory. The idea being that you
could "program" the rig to respond and break squelch only in response to
calls from another rig sending matching coded tones. Sort of an early attempt
at a private line.

The Break in Motown will not be anywhere the size of Jacksonville at least keyclown wise., but it is a good break. I wouldnt worry to much about the Fcc, The brutha's in Motown will take care of bizness if need be, so i don't see the threat as real. If you got a "piece" I highly suggest you bring it, I would also be careful as to where you park your mobile lock it up real good and keep it close, they don't take to kindly to strangers.

Hi Frank, How's the delusions of grandeur?
You know, I could go around and around, but alas,
you being the perfect, law abiding, god, prophet
that you are, well it's worthless to argue.
Anyone with a logical sense will be able to look
up your posts on Deja.Com, and as such can see you for what you are,
litterbug, illegal amp builder, selling illegal
amps, paranoid hypocrite, sorry, that's just the facts.
You are very close to being the first person in my
killfile, I thought that maybe an intelligent discussion could
be had with you, but again you are so hung up with BOL, "I'm always right,
even though the cop caught me", "I was
only joking in that post, I really wasn't going to build an amp", " I
provide a service to my community", whatever
you want everyone here to believe. Dream on, because
you do live in a dream world of your own.

TTFN

The Landshark
--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Landshark you need to be more credible when trying to discredit others. regarding the Palomar if a ham is operating it it doesn't have to be type accepted. Didn't the NG go through this argument before, I think it did and we got 22 different answers.

Example (A). A ham builds a homebrew amp is it type accepted? NO!
Example (B) A ham buys a plasma generator tuned for 27 mhz and modifys it to work on 10 meters. Does it have to be type accepted NO!
Example (C) A ham buys a 11 meter radio and tunes it for 28 MHz. Does he need to have it type Accepted . NO!

"The Landshark" <Landshark@TheLandshark.Com> wrote in message news:uRuO6.

>How long have us cbers been urinating on your peg leg anyway?

--
You arent a cber you don't talk on cb freq remember your a free bander. I am
more of a cber than you'll ever know my cross eyed friend.

"Because you say so? You have never said anything radio related here
ever that amounted to a hill of beans. A new gender confused nic and
you have merit because you claim it? Hehehe! You couldn't claim
continence let alone anything radio related or anything that anyone
would even consider of remote interest to the hobby, and a hobby it is,
deal with it, Mr. Mom. I guess you couldn't read the words, so I will
reiterate, your trolls are all over the group right along side Adair's.
>No, you don't matter,

I must matter you are replying to my posts religouly and you are writing

shit well I cannot make heads or tails of what you are saying you talk like a babbling buffon, and I think you like to read what you post. Do you think you are funny? I certainly don't think your funny more like pathetic. I have no affiliation with your friend that you are so enamored with Mr. Adair. I don't think you can post without using his name. try it see how long you can go without bringing uop Dougs name. Do you want to talk about radios? Amps ? Antennas? theory, gunn diodes, duplexers, waveguides, transmitters, a-d circuits, microwave theory? I have yet to see anything intelligent that was radio related come from your posts, other than hey DX was good on the freeband. What have you added to the group that would suggest thought? Zero you are brainless, jobless, clueless. Thats why you live in Florida the home of Low income Living, where trailer parks and 7.50 hr are king.

>Somewhere, someone mistakenly told you the world
>revolves around you.

-
what the F--- does that mean? Where have I ever said this or insinuated this, Oh sorry your just listening to yourself talk again. Babbling brook at the mouth.

Have you been taking Leland lessons? So, again, you
don't matter. I just like embarassing children like you that self
project and openly support Dogie spamming the group with his homo
ramblings and rants whenever he arrives at the conclusion that he is
helpless against the cbers. Once again, pay attention. You do not
matter, despite what Adair whispers in your ear."

There go those names again Adair and Leland, They must really be eating at you you cannot post withou mentioning there name numerous times. Pathetic Purely Pathetic you are. Show me where I openly support Doug or anyone even you who spams the NG daily. Your a jackass and I CAN SEE WHY THEY HAVE TOOK TO YOU LIKE DIARREHA

"After you interjected your Dogie loving beak into a radio related
question that was directed at another, yep, I sure did, and you are
incapable of providing an answer,

You are the Doug lover not me oh Pathetic One. I usually don't argue with dimwits, I don't know why I am making an exception on your part.Besides Why do I want to answer your stupid question about the Pornfessors skywave amp, give me One good reason to answer you, maybe you forgot, remember you werent talking to me you werent asking me the question smegma breath. Go drink your morning six pack, beat the dog and take a ride to the eye doctor maybe he can straighen out that cross eyed problem yyou got.

so you resort to Dogie status and call
names. Hard for you genderbenders to stay on topic, eh? Were you the one living with Adair when the only girl he ever had left him for a cber?

You have reason to be proud, as a Dogie supporter."
==========
Take some time out of your busy schedule, show me where I support Doug. whoops there goes that name again, your lover Doug ..You make accusations and cannot provide proof. If what you say is true post it its that simple. Show me my support for you lover. Ill be waiting.

There is a difference between embarassing someone
of your challenged intellect and replying to one. I do not expect you to figure it out, after all, you are one of the ones who have an acceptance problem that can't get over the fact that no one cares that you are a cheerleader for the cb intimidated."

Please show me my cheerleading for Doug!

"You still haven't answered the question about the alleged skywave amp that can't modualate at 110 watts. Obviously, you know nothing about any radios or amps and would rather change the subject to one that is not relevant, such as your private with Adair, (shudder) which you for some reason felt the need to share with the ng, which is why the original question wasn't directed at you, because you don't have the capacity to answer anything technically related, let alone field questions about radio and amps. Bye bye. :)"
==========
Anyday you care to match wits about electronics, cb radio or related items let me know. I will make you look like a bigger jackass than you already are. See your comprehension skills are very poor. And I quote " yet you want me to discuss something doug and I may have talked about in private, this I would consider none of your business" End quote. I said Doug and I may have talked
I never said I have talked to him, I said I may have, do you want me to spell it out for you. I may have talked to him, I may have talked to you, or I may not. I think Ill go with the latter May not. So don't try to make something that isnt there twisite. That is a false accusation something you and your gang are very good at. you talk but offer no proof to back up anything. I printed your fishing picture out and now use it for toilet paper this way I wipe my ass with your face several times a day. You pathetic moron. go play in traffic.

>that you are, well it's worthless to argue.

Going around and around is all you seem to be capable of doing, and it
isn't getting you anywhere. So I guess you are correct, it -is-
worthless to argue. But you just keep on doing it.

> Anyone with a logical sense will be able to look
>up your posts on Deja.Com, and as such can see you for what you are,
>litterbug, illegal amp builder, selling illegal
>amps, paranoid hypocrite, sorry, that's just the facts.

And I invite them to do so. And to look at my web page. And they
should do the same for you, especially before they respond to your
posts. It seems you have a history of going ballistic when anyone
strokes you the wrong way.

> You are very close to being the first person in my
>killfile,

You won't because you are now obsessed with anything I might say about
you. Just like moped and twistie.

> I thought that maybe an intelligent discussion could
>be had with you,

I can 'discuss' intelligently. When are you going to post anything
worth discussing?

> but again you are so hung up with BOL, "I'm always right,
>even though the cop caught me",

You and the cop were correct that I did litter, but not $950 worth. It
was an inadvertant act for which I was responsible. I paid my fine, I
fought a bogus law and won. I don't recommend breaking the law,
intentionally or not, but I do recommend changing it if it is wrong.
Not only do you encourage the intentional violation of law, you do
nothing to try and change it. So when are you going to 'stand up' and
take responsibility for -your- violations? Stand proud, shark!

> "I was
>only joking in that post, I really wasn't going to build an amp",

Inserting words again. I never said I was "joking".

> " I provide a service to my community",

I do, but I never said that. AND YET AGAIN you attribute words to me that I never said. Sheesh, shark, do I have to start reporting you to your ISP for plagiarizing me? Why don't you just eliminate the hesitation and start forging my posts?

> whatever
>you want everyone here to believe. Dream on, because
>you do live in a dream world of your own.

You are a prime example of the axiom, "People will believe what they want, regardless of the facts." Well, I give people a bit more credit than you do. I think that anybody still reading our posts has the ability to draw THEIR OWN conclusions, not YOUR conclusions.

Don't put words in my mouth you presumptious twit!

1. Twist is not fun. I am here for fun. So I don't read much on the subject at all.

2. Things are perfectly capable of happening without my blessing or permission so there are any number of things I do not instantly judge. If I have an opinion and it serves any purpose to air it, believe me you will hear it.

3. As I do not run my life by taking a vote, I have no expectation that anyone else does or should. The entire Chinese Army's opinion on anything is noise. Even their opinion carries more weight than some multi-personality Lifer Tech carrying on a crusade to avoid a simple-minded code test. Judge and be damned!

I'm sorry Jack, your right. I guess where Sparky
has claimed a number of times that he's not a ham
wasn't available for you to jump into the middle
of the fracas.

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

That's right Doug,
You tell me, yup, you tell me. Boy, do you
still have that radio for sale and would you still
modify it, like you promised in that post you made?
Yup, your real credible. Also, again for the
thirteenth time, Frank has claimed that he is
not a ham, there fore it is illegal for him to build,
sell, operate an amp, all which he has claimed
on previous posts.

2648. "The most effective killfile is your own brain"

Newsgroup: rec.radio.cb
Date: 2001-05-23 01:40:12 UTC
From: Capn'Jack <capn@jack.com>
Message-ID: <0yEO6.2147$Oz4.746438@news1.rdc2.pa.home.com>
Source record: 82950

Free Speech - That speech which does not conflict with Ethics.

Lawful Speech - That speech which does not conflict with Morals.

Message - Any usenet article which does not cause another article
to be deleted from a news spool via anything other than
the standard expiry functions of a news server.

Mob - Any arbitrary group of human beings who gather together for
one or more purposes. Synonym for Community.

Morals - Rules of conduct which appease and satisfy a Community.
Sometimes directly opposed to Ethics.

Basic Philosophies

4.1) Declaration of Free Speech

We hold these Truths to be self-evident, that all Humans are created
equal, that they are endowed by their creator with certain unalienable
Rights, that among these are Unhindered Communications, Unregulated
Exchange of Ideas, and Freedom of Speech, that to secure these rights
the Usenet is instituted on networks of the world, that when any
administration of Usenet becomes destructive to these ends, it is the
Right of the People to alter or to abolish it and to institue new
administration, laying its foundation on such Principles, and
organizing its Powers in such Form, as to them shall seem most likely
to effect their Free Communication.

[With much thanks to the Declaration of Independence]

The litmus test for True Free Speech is speech that makes you -want-
to silence another person. If that speech is not silencable by you
(whether you want to or not), you have a state of True Free Speech.

4.2) What is True Free Speech?

True Free Speech is that speech which is hindered by nothing other
than the speaking individual's own Ethics.

Where True Free Speech exists, no external party may restrict someone
else's speech, for any reason, period.

Speech, in the above definition, does *not* restrict another's speech.
It can't. It takes a person to *act* on that speech to restrict
another's speech. That person, then, would be the responsible party.
A news admin setting up a news server to act is one way to create the
illusion of speech-restrictive speech.

The litmus test for True Free Speech is speech that makes you -want-
to silence another person. If that speech is not silencable by you
(whether you want to or not), you have a state of True Free Speech.

4.3) What is net abuse?

Any action that stops a properly configured transport system from
performing its normal store and forward services.

Examples of net abuse:
-Posting articles that directly crash the news server that
is to inject the post into the news stream.
-Posting articles that contain control messages designed to
crash news servers.
-Directly hacking into a news server to disable it.

Examples of things that are NOT net abuse:
-Voluminous posting
-SPAM
-Excessive crossposting
-Off topic posting
-Flaming or arguing

4.5) What is filtering?

Filtering is the act of taking responsibility for what you read by
configuring your newsreader to present only what you want to see.
This is a special and expected case of Censorship above, simply
extended to include -you- as the remover of ability from others
to communicate to yourself. This is the -only- acceptable form
of censorship, IMO.

There will undoubtedly be articles you will see, whomever you are,
that you do not like. Ultimately, however, filtering these articles
out is the personal responsibility of every reader of Usenet.

2649. What is a Dishonorable ISP?

Newsgroup: rec.radio.cb
Date: 2001-05-23 01:44:41 UTC
From: Capn'Jack <capn@jack.com>
Message-ID: <dCEO6.2153$Oz4.749108@news1.rdc2.pa.home.com>
Source record: 82951

There are those who expend enormous amounts of energy to Censor articles, either by canceling them or by complaining to the ISP of the poster. To the Free Speech Advocate, these are dishonorable actions at best.

However, if an ISP complies with the intent of these complaints, then that ISP is dishonorable. The aware Free Speech Advocate should pick another one, for the net effect of a dishonorable ISP is that anything controversial can be silenced with complaints.

Usually, dishonorable ISPs have wording to that effect in their Terms of Service or Acceptable Use Policy. Here is a gross example:
> "[...] While the freedom of speech is protected by the First
> Amendment of the Constitution, any activity, action or e-mail from
> any user that triggers complaints, hate-mail, or blocks on our
> Domains at a particular site is prohibited. Dealing with these
> complaints ties up computer and human resources. These are resources
> that should be used to maintain the system and support our user
> base. [...]"

The fallacy of "harm"

Some strawmen advocates go so far as to imply that "harm" comes from speech. In fact, I can think of no thing more incapable of producing harm than speech itself. To wit:

- We can't allow free speech. What if something extremely damaging is posted?

Any "damage" that arises out of speech is not caused by the speech itself, but by those who listen and then subsequently act. Speech in and of itself does not "damage" anything.

Another way this strawman can easily be debunked by recognizing who is defining 'damage'. See above, as this is the same as saying something is "net-abuse".

2650. Re: Landshark stands really Proud!

Response below:

Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

> was an inadvertant act for which I was responsible. I paid my fine, I
> fought a bogus law and won. I don't recommend breaking the law,
> intentionally or not, but I do recommend changing it if it is wrong.

Hi Frank, changed my mind, not going to
ask you, "you're still delusional"

Please cite the new law that you changed for the
record. I'm sure not only I, but others would
love to know how "you", could have a state law
for littering over-turned? Fine reduced yes, changed,
NO.
Just to let you know, I have added you to my killfile,
and occasionally I might grace you with a response, but otherwise I feel
that you really need to be left alone, with
yourself, you really don't know the difference between right and wrong.

The Landshark

Actually many people are not aware of the "international" nature of UseNet.
There are countries that have different "rules". I'm sure that in at least
one of them flood posting is OK.

Also flood-posting is harmless, like jaywalking or sidewalk spitting.

Also ISP's don't care about flood posting, there are more serious crimes
out there they should be concerned about.

Also flood-posters have the right to break TOS rules as long as they are
willing to take the penalties.

Frank, grasping for straws now, boy,
I sure hope that nobody's taking an
evening stroll down your street, you
are liable to jump out from behind the bush
and start yelling my name at them.

The Landshark

Oh, by the way, please report my Sig. file,
I'm sure they would love that.

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Cabal - Those net citizens who by their own consensus reality, set themselves apart from and superior to usenet users and use this illusory superiority to restrict or censor any usenet user's attempts at communication through usenet.

The key here is self-control. Control of others is usually a symptom of a need to control oneself coupled with a lack of willingness to exert such control. We, as humans, cannot successfully and efficiently control other humans, therefore our controlling impulses should be directed at ourselves.

- If a lot of people complain about someone, there must be something that person is doing wrong.

Just because a mob comes to your door and demands to lynch someone, doesn't mean that the someone in question did anything worthy of being lynched. Usenet has become mob-oriented with several issues, most notably "Spam", demonstrating the new jargon term "cybermob".

Mobs are generally ignorant, dense, and single-minded. They have a tendancy to be created and sustained by emotional issues, with subsequent loss of sanity for most involved.

2662. D.A.R.E. TO KEEP CBERS OFF AMPS

Newsgroup: rec.radio.cb
Date: 2001-05-23 02:21:10 UTC
From: AntiKeyClown Community Outreach Unit <community@outreach.com>
Message-ID: <3b0b1086@news2.mibx.net>
Source record: 82973

Overview of the "D.A.R.E. To Keep CBers Off Amps" Program
==========

The D.A.R.E. program has three main goals. First, D.A.R.E. seeks to provide CBers with a knowledge base on the effects of amplifier abuse and freebanding that go beyond the legal ramifications and extend to emotional, social, and economic aspects of life.

Secondly, D.A.R.E. aims to build decision-making and problem solving skills and strategies to help CBers make informed decisions and resist amp use and outlaw CB peer pressure.

Lastly, an integral part of the D.A.R.E. program is to provide CBers with alternatives to amp use.

D.A.R.E. is a universal program designed to reach the general population, rather than "at risk" groups, and it is most often targeted to appeal to the fifth and sixth grade mentality.

Research has shown this intelligence level is very receptive to anti-illegal CB messages, particularly as they approach a mental age associated with CB experimentation.

The curriculum focuses on knowledge and skill development in seven areas: 1) cognitive information, 2) recognizing pressures, 3) refusal skills, 4) consequential thinking and risk taking, 5) interpersonal and communication skills, 6) decision making, 7) positive alternatives.

Some of the D.A.R.E. lessons focus on raising awareness in these skill areas, while others emphasize their practical application.

D.A.R.E. is instinctive in its approach in that specially trained AntiKeyClowns conduct the lessons in the newsgroup.

The lessons provide factual information about illegal amplifiers, with an emphasis on gateway behavior (sliding, peaking and tweaking, channel jamming), and teach refusal skills through role-playing and other techniques.

Since its inception, D.A.R.E. has helped keep hundreds of thousands of CBers away from illegal amplifiers and freebanding.

Hello Brian,
I'm sorry that you see it that way. I would
recommend that you go back to deja.com, look
at the accusations that he has condemning anyone,
operating or selling linears. Frank (Sparky) has been
on here for 6 months now condemning everyone that
use's a linear, when he himself has done all of the
above.
Yes, your right that it has gone to far, but I have
come to the decision that he will never admit he's wrong,
and as such it would be futile to continue.
I have never said I didn't use those item's, or that
I will in the future, it's just I hate a hypocrite and that's
what he is.

I'm truly sorry if you see it that way, but have a good
day and a pleasant tomorrow.

The ONLY thing being campaigned for is to get you keyclowns to piss and moan.
Boy oh boy do you do it.

Time and again the AntiKeyclowns have stated that all they want to do is
make you use bandwidth. Time and again you do so.

I have read at least 2 dozen posts over the last 4 months that said they
felt your bitching and insult trading was funny and accomplished the intended
purposes.

What I am wondering is why do you keyclowns indulge them?

I read posts by one keyclown here that always have something to do with "credibility".
Do you not understand that your issues are not their issues, and that they
do not care?

Someone here called you keyclowns "large mouth bass". Very apt.

2668. CBs (HJC-27a) motorcycle B-2-B systems

Newsgroup: rec.radio.cb
Date: 2001-05-23 02:38:23 UTC
From: Christopher Hedrick <1christopherhedrick@home.com>

Source record: 82965

I've installed, well atleast tried to install the CB offered by Chatterbox. Everything seemed fairly simple until I went to transmit (TX) by pushing the PTT button. It began giving feed back (only during TX). So bad that I couldn't wear my helmet. The question I have is does anyone have one of these unit and how did you get it working?
Things I've narrowed down on the problem:
-The feedback only happens when the unit is used with the PTT button and the helmet mic/earphones. (which would be useless as a bike-2-bike comm system.)
-The feedback goes away when you move the mic outside of the helmet. (also making the system useless to me as a B-2-B system)
-Even with the feedback eliminated the return volume is at its max.
Or, Does anyone know of another good CHEAP system. J&M runs $400 for the same system. Way out of my price range.

V/R
Chris

Good God, man, how stupid are you? Start at www.fcc.gov, click on FCC regulations. That will take you to a site with the entire Code of Federal Regulations. From there click on Title 47. For info on how anyone can build an amp, click on Part 2 (actually, first you click on Parts 0 - 19). For info on when an unlicensed person may operate an amateur station, click on Part 97. If you get lost, come back and cry for help.

It happens all the time, but it just doesn't make front-page news. The
statutory laws are changed periodically to reflect current applicable
case law. Until then the case law stands. When the SMC is changed
again, you probably won't see the same law that I QUOTED IN MY WEBPAGE

Well I can't speak for everyone, just for myself. What has taken place
here on several sides has been downright abuse of the internet, network
resources, isp resources. I am a network admin, I have to account for
the bandwidth that is used. In case you were not aware. bandwidth is
darn expensive, go out and ask your local telco (telephine company) what

a t1 costs (thats bare min) up to higher like tripple oc3 ect. Now when some foold get into a spam/usenet flood post war, especially posting binaries, that wastes alot of server, network bandwidth, ties up the server itself, and in actuality costs money. THAT is why accounts get closed, not because of the content. THAT is why ISP's have an AUP (Acceptable User Policy) or a TOS (Terms Of Service).

Right now we (the IRC network I am affiliated with) is having problems with abusers from a shell provider (an ISP that provides Unix shells to host irc clients/bots), the ISP has been notified time and time again that their users are abusing the IRC network resources by loading 30-150 cloned connections, sending out packets of data to flood the servers ect. If this ISP doesn't play ball we will have no cchoice but to block their connections. Does that make us bad? No, we have to protect our own interests. Our network has already lost some fast,stable servers due to a DDOS (Dedicated Denial Of Service attack) from some packet monkeys from Romania, this kids literaly shut down several entire ISP's with their abuse.

Now let me tell you something, the posts here from ALL sides that were doing the flood posts are considered abuse, just one individual from the "antikeyclown" group was posting more than 100 posts a day. And don't tell me that one person didn;t posts that many in a day, I have been reading/tracing headers and IP addresses as long as this discussion group has been in existance.

Doug, Leland and everyone involved with the AntiKeyclown brigade, I respect you guys for your beliefs, I share them whole heartedly. I will now admit publicly that I at one time years ago was guilty of abusing the 11 meter spectrum, a kindly friend of mine took me to one side and explained the facts of RF life to me, in the HAM world you'd call him an elmer. He took the time to talk with me patiently, he didn't brow beat me, or call me names, Lord knows he had every reason to (he lived 2 houses down from me and I was bleading his recieve really bad), instead he took the time to talk to me, to make me understand there was a whole new world out there that was alot more thrilling. Of course the only reason I had the amp was because some of my friends had them, you know how it goes the whole "keep up with the Jones" thing. My point is, CBers are not stupid as a whole, sure there are some that may not be to bright, but if you take the time to talk to them patiently, things can be alot more peaceful. AND there is no reason why we can't all share information, I have been into radios since I was a child, does that mean i know it all? Heck no, I have alot to learn, and there are many that have the information I need.

And now to the opposite side, Twisty and all the rest. Although I do not agree with running power, or "freebanding", I do respect your thoughts, I do not have to agree with them, but I respect the idea that everyone is entitles to their own opinion. We were designed to have the freedom of choice, to chose our own course of life to follow. So if you choose to operate illegally, thats your choice and you will be the ones to face

the consequences for your choice. But those of us that do not believe in such actions are not wrong either, as thaqt is our choice and our beliefs.

In closing, Why don't we all sit back, have a cup of coffee (or your drink of choice if you are of legal age and indulge) relax, and think about the enjoyment we all recieve from this fun hobby called radio communications. If we see,read something we dislike, ignore it or add the person to your killfile. lets all try to act our age.

73's and no hard feelings to any of you (even the person that badmouthed me and the public service organizations I belong to)

2675. Re: Curious?? Gender confused Capn Tennile admits cb affair withAdair

Newsgroup: rec.radio.cb
Date: 2001-05-23 03:13:38 UTC
From: twistedhed@webtv.net
Message-ID: <7199-3B0B2AE2-196@storefull-127.iap.bryant.webtv.net>
Source record: 82976

"Who said anything about Google? If you don't kow, I'm not telling you.
You claim brilliance, figure it out."

There go those names again Adair and Leland, They must really be eating
at you you cannot post withou mentioning there name numerous times.

"When everyother post on the ng is by Adair, how can one not see? Oh,
that's right, you are the one that has header phobia."

Pathetic Purely Pathetic you are.

"Actually, I was thinking the same thing about you when you poked your
beak into a question that I directed at Adair about a skywave amplifier.
You began calling names after I successfully relegated you to the manure
booth that dogie and company so happily frolic in."

Show me where I openly support Doug

"Look back at your post. You attacked me when I was drilling Adair about
this skywave amp that he claimed great knowledge of. Almost likehis
armchair lawyer."

or anyone even you who spams the NG daily.

"Lies. You are in good company with Adair. Stay there."

Your a jackass

"Your? How about, "you're" Einstein?"

and I CAN SEE

"You can't see anything."

WHY THEY HAVE TOOK TO YOU LIKE DIARREHA

"And we can see why you took to Adair like a morse code challenged
genderbender."

"After you interjected your Dogie loving beak into a radio related
question that was directed at another, yep, I sure did, and you are
incapable of providing an answer,

You are the Doug lover not me

"You are the one that said you had a private liason with him and was
offended because you thought I was asking you something of it. All I
want to know about is the skywave amp thatcan't modulate at 110 watts

that Adair has repeatedly stated he has great knowledge of."

oh Pathetic One. I usually don't argue with dimwits, I don't know why I am making an exception on your part.

"Because you fit in with the acceptance problem bunch."

Besides Why do I want to answer your stupid question about the Pornfessors skywave amp,

"Don't know. Why did you stick your nose in the thread in the first place if you had nothing to add when the topic was clearly the amp?"

give me One good reason to answer you,

"If only you had a clue what your answers mean to me."

maybe you forgot, remember you werent talking to me you werent asking me the question smegma breath. Go drink your morning six pack, beat the dog and take a ride to the eye doctor maybe he can straighen out that cross eyed problem yyou got.

"Cross eyed? Whatever gave ya' that idea? I may wear a patch and be thinning, but I can see just fine."

so you resort to Dogie status and call
names. Hard for you genderbenders to stay on topic, eh? Were you the one living with Adair when the only girl he ever had left him for a cber? You have reason to be proud, as a Dogie supporter."
==========
Take some time out of your busy schedule, show me where I support Doug. whoops there goes that name again, your lover Doug ..

"No. You said you had a liason with him. Even thought I was prying into y'alls affair when the only thing I asked about was the amp."

You make accusations

"And with that, you are in the troll zone. I made no accusations, but have fun with yourself. And I will be certain to post whenever you spoof again. Go back and learn some RF theory, little man."

and cannot provide proof. If what you say is true post it its that simple. Show me my support for you lover. Ill be waiting.
There is a difference between embarassing someone of your challenged intellect and replying to one. I do not expect you to figure it out, after all, you are one of the ones who have an acceptance problem that can't get over the fact that no one cares that you are a cheerleader for the cb intimidated."

Please show me my cheerleading for Doug!
"You still haven't answered the question about the alleged skywave amp that can't modualate at 110 watts. Obviously, you know nothing about any

radios or amps and would rather change the subject to one that is not relevant, such as your private with Adair, (shudder) which you for some reason felt the need to share with the ng, which is why the original question wasn't directed at you, because you don't have the capacity to answer anything technically related, let alone field questions about radio and amps. Bye bye. :)"
==========
Anyday you care to match wits about electronics, cb radio or related items let me know. I will make you look like a bigger jackass than you already are. See your comprehension skills are very poor. And I quote " yet you want me to discuss something doug and I may have talked about in private, this I would consider none of your business" End quote. I said Doug and I may have talked
I never said I have talked to him, I said I may have, do you want me to spell it out for you. I may have talked to him, I may have talked to you, or I may not. I think Ill go with the latter May not. So don't try to make something that isnt there twisite. That is a false accusation something you and your gang are very good at. you talk but offer no proof to back up anything. I printed your fishing picture out and now use it for toilet paper this way I wipe my ass with your face several times a day. You pathetic moron. go play in traffic.

Top of the Evening Jack,
It's working great thank you!, and
you, how are the wife and little ones?

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

Why Doug,
You were the one that was shunned, and now
you fell as though this group owes you something.
Because you were ignored, told to FXXX off, and
yes I was one of those people. But then you posted,
"I can flame with the best" Yep you have proved that.
All of a sudden, somebody turns out the lights and
more cockroaches come out from under the fridge,
with the same attitude as you, "illegal operations,
amps this, and all that other legal crap. When you all,
except Leland that is, have posted and admitted to doing
the very thing that you are criticizing.

Nathan
The CB Band is at 27 Mhz AM and SSB, the air band is up at 120 Mhz AM and the marine band is at 155 Mhz FM. That is quite a spread for a handheld and a small antenna. the radio would need a built in antenna tuner or a number of interchangeable antennas to be affective. I am not saying that it is not possible to build but the price would be prohibitive. You can find some Ham mobiles that will do it and more like the Icom 706 mk-II g and the Yeasu FT-100D but I have not heard of anything as small as a handheld with that kind of spectrum spread.

Care to go back and read the posts see who called whom names first.

>
> "Lies. You are in good company with Adair. Stay there."
---
denial you are in good company too, with every comvict. They never did it
there all innocent like you twistie.

>
> "You can't see anything."
==========
I can see you are certainly on medication. That can be the only excuse for
the way you are.

> "And we can see why you took to Adair like a morse code challenged
> genderbender."

Sorry passed the code test many years ago.

> "You are the one that said you had a private liason with him and was
> offended because you thought I was asking you something of it
---
Could you post any specific info that said I had a liasion with him. Again
twisite, you have no credibility anyone who reads both posts will clearly
see you are a liar and are making things up as usual.

> "Because you fit in with the acceptance problem bunch."

I don't need to feel accepted twisite thats where you are sadly mistaken is
that what your problem is you want to feel accepted and the boys won't let
you. Ripping you a new asshole is pure enjoyment

> "Don't know. Why did you stick your nose in the thread in the first
> place if you had nothing to add when the topic was clearly the amp?"
---
because i watch how you post and figured that was the thing to do put my
nose where it don't belong . Just like you twisite.

> "If only you had a clue what your answers mean to me."

---
kinda like what your last breath will mean to me.

>
> "Cross eyed? Whatever gave ya' that idea? I may wear a patch and be
> thinning, but I can see just fine."

> "No. You said you had a liason with him. Even thought I was prying into
> y'alls affair when the only thing I asked about was the amp."

Snapper Head your lying again. Post where i said anything even remotely close to what you just said. You can't thats why you are a loser No one is on your side, they may not like doug but that doesnt mean they are sideing with you. No one has stuck up for you. Face it your a Loser, that lies for acceptance. And no one will accept you.

>
> "And with that, you are in the troll zone. I made no accusations, but

>at you you cannot post withou mentioning there name numerous times.
>
>"When everyother post on the ng is by Adair, how can one not see? Oh,
>that's right, you are the one that has header phobia."

Do you mean, "When everyother [sic] post on the ng is by Adair, how
can one not see" what? That all posts are by Adair? You still can't
read a header to save your life, you just like posting them to give
others the impression that you might actually have a clue. Sorry,
twistie, we know better.

> Pathetic Purely Pathetic you are.
>
>"Actually, I was thinking the same thing about you when you poked your
>beak into a question that I directed at Adair about a skywave amplifier.
>You began calling names after I successfully relegated you to the manure
>booth that dogie and company so happily frolic in."

You acted just as was predicted, twistie.

> Show me where I openly support Doug
>
>"Look back at your post. You attacked me when I was drilling Adair about
>this skywave amp that he claimed great knowledge of. Almost likehis
>armchair lawyer."

"Drilling"? Don't you mean "spamming"? Or do you just like to say that
your posts are not "likehis"? BTW, do you even know the proper way to
end a sentence, mr. journalist?

> or anyone even you who spams the NG daily.
>
>"Lies. You are in good company with Adair. Stay there."

If twistie says it is a lie, you can bet your imaginary shrink that it
is a lie!

>Your a jackass
>
>"Your? How about, "you're" Einstein?"

Ah, yes, the grammer and punctuation attack. Don't even go there,
twistie.

> and I CAN SEE
>
>"You can't see anything."
>
> WHY THEY HAVE TOOK TO YOU LIKE DIARREHA
>
>"And we can see why you took to Adair like a morse code challenged
>genderbender."

And now you begin with the transexual attack. That's a suprise,
beginning two styles of attack in the same post.

>"After you interjected your Dogie loving beak into a radio related
>question that was directed at another, yep, I sure did, and you are
>incapable of providing an answer,

Sorry, twistie, but nobody is going to fall for that "radio related"
crap. You were trolling him, pure and simple.

>---
>------------
>You are the Doug lover not me
>
>"You are the one that said you had a private liason with him and was
>offended

Here's a prize for the English comp class:

> because you thought I was asking you something of it.

Yep, you sure do like to criticize, don't you, twistie?

> All I
>want to know about is the skywave amp thatcan't modulate at 110 watts
>that Adair has repeatedly stated he has great knowledge of."

Any reasonable person would conclude that your question will be left
unanswered. Your continued spamming of the question will probably not
get you a considerate reply from anyone. You shouldn't expect one.

>oh Pathetic One. I usually don't argue with dimwits, I don't know why I
>am making an exception on your part.
>
>"Because you fit in with the acceptance problem bunch."

"Acceptance problem" is a terrible phrase for an ostracized spammer to
use to describe a "bunch".

>Besides Why do I want to answer your stupid question about the
>Pornfessors skywave amp,
>
>"Don't know. Why did you stick your nose in the thread in the first
>place if you had nothing to add when the topic was clearly the amp?"

Maybe because it is a public forum. If you didn't want a public answer
you could have sent it via email, and we would all have been much
happier.

>give me One good reason to answer you,
>
>"If only you had a clue what your answers mean to me."

Enough to respond to almost every line of text he writes.

>maybe you forgot, remember you werent talking to me you werent asking me
>the question smegma breath. Go drink your morning six pack, beat the dog
>and take a ride to the eye doctor maybe he can straighen out that cross
>eyed problem yyou got.
>
>"Cross eyed? Whatever gave ya' that idea? I may wear a patch and be
>thinning, but I can see just fine."

Maybe it was lack of reading comprehension.

>so you resort to Dogie status and call
>names. Hard for you genderbenders to stay on topic, eh? Were you the one
>living with Adair when the only girl he ever had left him for a cber?
>You have reason to be proud, as a Dogie supporter."
>==
>Take some time out of your busy schedule, show me where I support Doug.

Oh well, no sweat off my sac. I'm still trying to figure out what
twistie's obsession is with this amplifier that doesn't modulate at
110 watts. Amps don't modulate, so what the hell is he talking about?

HAHAHAHA!!!!!! He responded because he must. His ego dictates his
actions. You, on the other hand, are worth a response maybe once a
week, simply because you rarely post anything worth a response. I
responded in hopes that might change...

Yorkshire pudding? Hell, you have never tasted my Chicken Curry. Do
you think I'm going to post my recipie? Not only 'no', but FXXX NO!!!.
Next time you drive through Spokane, give me a call and I'll do up a
batch (just avoid the potholes). If you don't like the spicy stuff, I
also make perfect fried chicken. And I don't mean just good, but
PERFECT -- the way it's supposed to be done. And if that doesn't
appeal to your pallate, I can make a patty-melt that will offend the
American Heart Association.

Yorkshire pudding? FXXX that, I make REAL food!!!

Sparky, traditionally Yorkshire Pudding was served to keep the guests from eating too much of the entree that really cost money. When they left you gave them the leftovers to tide them over on the long journey to Wigan Pier.

On my last trip to England I had to wash some socks and - after a lot of long looks - got directions to the nearest laundro. Next to it was a curry emporium where it appeared the clients were obtaining spices not normally found in curry. While watching my Fruit of the Looms spin I was hustled by an Aussie lass working her way around the world horizontally. You undoubtedly make better curry than this place but you will never equal the floor show.

First of all if you "own" a reputable radio shop, you would know where to get the parts you are looking for. For pete's sake everyone in the world has heard of the mail order ripoffs like coppers.

Second of all those "noisemakersa' have no purpose or place on the radio, same thing with the connex boards and echo mics, All they do is make it harder to communicate

And probably a good thing. It's one thing to fiddle with the freeband. But thinking you can get some "extra" channels by going to aircraft frequencies would be the end of life as you know it.

A fellow in Jupiter Florda and another outside Atlanta will be happy to give you the details. Unfortunately, you cannot reach them via radio or Internet; you must speak with them in person.

Visiting hours are Tuesday-Friday Noon to 4PM and 10AM to 4PM on Sat/Sun.

No warnings are issued for unauthorized transmissions on most aircraft
freqs, and distress freqs are automatically DF'd within the first
half-second of transmission. My advice to anybody interested in
testing the waters is to go for it. (I volunteered for the suicide
hotline but they turned me down.)

That guy seems to add something to it every year. This year he added
blinking LED's for the tower lights. In case you didn't notice he has a HT
antenna mounted on it too, which works.

Did you see the goat with the ATV setup on its' back in the fleamarket? Had
a CCD TV on a short shaft above the goat's back, antenna, and a small solar
panel to keep the battery back charged.

Who said anything about any "extra" frequencies. A friend of mine is a pilot and is looking into buying an airband handheld. He would like to know if he can also get cb and marine in the same package. I see nothing wrong with this. I can see how someone could get in trouble with such a rig, but don't assume that I am someone looking for "extra" frequencies.

> QRM observed:
> And probably a good thing. It's one thing to fiddle with the freeband. But

> good and keep it close, they don't take to kindly to strangers.

I can see you don't have much "experience" in Detroit. Most everybody has a "piece" including the kids. That's why they had to install metal detectors in the schools. That 12 year old walking towards you doesn't want to ask for directions, he wants to sell you some drugs, and if you don't buy any he will just cap your sorry behind and take your wallet anyway. Also the tiny elevated subway train down town is known by many of the locals here as the "Mugger Mover" compared to it's official name the "People Mover".

Locking up you mobile won't stop anybody if they want it. They will and can take ANYTHING regardless if it is even bolted to the ground! One year somebody snatched all of the brass lamp poles, about 12 of them, from outside the Detroit public library, and NOBODY saw a thing. We also had a problem with people stealing the Aluminum railings on bridges, expressways, etc.to sell as scrap metal. We have about as many car "chop-shops" as we do legal auto repair centers too.

So while your here don't forget to get the Tee-shirt that says "Detroit, where the weak are killed and eaten." or the other one with a picture of a hand gun on it and underneath it says "Come back and visit Detroit again, we missed you the last time." Remember that Detroit had the tile of "Murder Capitol" at one point, and if your not nice to the locals you just might be the needed statistic to get that title back again. They don't shoot people here because they don't like them, they shoot people just for the fun of it. Enjoy your visit.

Not really Doug,
I meant it when I told you thank you for not
"flooding" the newsgroup. I appreciate it,
as do many others I'm sure So I'm serious
about when you offered a "Modified"
radio for sale on the cb newsgroup. You and
other people run around here ranting about
all the "illegal items", "illegal talk" when you
people are as guilty as the rest.
You know, I'll tell you that I and others we're
wrong to start unloading on you the way we did.
But on the same page when someone goes to a drag
race, starts to tell all the people that have "illegal"
cars for the road to get them off the road, well
what kind of reaction did you think you would get.
If the only kind of post you and others can make
about people is accusations about someone's sexual,
political, intellectual, social habits and character, well
why are you people on a cb group?

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine

Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

You asked nicely, so I'll answer nicely. At work, where I am at the moment, I post via google. When I'm home, I post via my ISP's Newsgroups feature under internet options. That's two, NOT three. I have in the past used the 11 meter call SSB411D, but since getting my ticket I hardly ever use that anymore. It all still looks a little like gobble-de-gook, TCPIP was never my forte.

Funny thing is that with google, it takes 3 to 6 hours to post. Sometimes toward the end of the day, I'll post with google and go home and post with CompuServe and actually beat my earlier post in. So there you have it, close but no cigar. If you have software like PH that deciphers this stuff and it tells you that I've posted three different ways, it's wrong. Also, doesn't nic stand for network interface card?...I'm Novell certified, but my present position is that of systems programmer analyst. I probably couldn't administrate a network to save my life now without some serious review. Like I said before, TCPIP is definitely NOT my forte. Like the old commercial said, "that's the stooory!" (I think I just dated myself.)

Sorry Doc.

"You sure are, Dogie."

A new kind of outlaw CBer has appeared on the scene since you were Elmered all those years ago. These idiots don't care about anybody's rights and they don't respect any laws.

"And this is how Dogie elegantly came into the ng. Since we have opposing views, we are criminals. Since some of us talk on the freeband, we automatically run power and have no respect for anyone and are anarchists, according to Adair's ludicrous accusations. He resorts to homo references (now you may look to Google and see how Adair cast the first stone) whenever he was cornered."

They don't want to become hams because

"Here is Adair's classic arrogance and ignorance, suggesting he knows why cbers do not become hams."

illegal CB is an end unto itself. These turds (yes, turds) deserve no respect from anyone, least of all an intelligent and thoughtful person like you.

"You do not know what respect is. You came in here an admitted troll, looking for cbers to harass, had your clock cleaned, and now you cry foul. Deal with it."

And, in addition to buying radios, they have purchased computers and automobiles.
QRM

Some of us backwoods, no teeth, stinky, redneck, trailer dwelling, jobless swamp hicks waiting on our welfare checks also have electricity to run those radios on. No automobiles here though, just pickups with rebel flags, gunracks, dogs, linears, and chawin' tobaccy.

"Twistedhed" <twistedhed@webtv.net> wrote in message >
You began calling names after I successfully relegated you to the manure
booth that dogie and company so happily frolic in."

Care to go back and read the posts see who called whom names first.

"Go ahead. I know what tok place."

"Lies. You are in good company with Adair. Stay there."
---
denial you are in good company too, with every comvict. They never did
it there all innocent like you twistie.

"I'm not innocent. I reduced dogie to what he is, and successfully drew
out the rest of you trolls that were intimidated by cbers. In all
actuality, I am the sole reason for you and dogie being looked at the
way you are. That was posted many times. Go back and find it since you
have a problem knowing what was said."

"You can't see anything."
==========
I can see you are certainly on medication. That can be the only excuse
for the way you are.
"And we can see why you took to Adair like a morse code challenged
genderbender."

Sorry passed the code test many years ago.

"No, you didnt."

"You are the one that said you had a private liason with him and was
offended because you thought I was asking you something of it
---

Could you post any specific info that said I had a liasion with him.
Again twisite, you have no credibility anyone who reads both posts will
clearly see you are a liar and are making things up as usual.

"And as you say, AGAIN, you and Adair appear to suffer from the same
affliction. What mental block prevents you from understanding that I
play better alone, usually do not get along with others, and don't care
what you or anyone else thinks? But judging by your ire, I may respond
to you as long as it took me to show spark was an involved Adair troll.
You c'hawks have no life except us. We validate you with our cb's and

walk on your rude types on the air because you are rude, have an acceptance problem, and to soothe your damaged egos, lash at those you respect the most. This should have been nipped as a child. Shame on your parents."

"Because you fit in with the acceptance problem bunch."

I don't need to feel accepted

"Sure you do, which is why you took on a new nic, because you can't deal with me humiliating you as I did Adair. That makes you a chickenhawk because you are too scared to post with your real nic. Try again, son."

twisite thats where you are sadly mistaken is that what your problem is you want to feel accepted and the boys won't let you.

"Wow. You have some IQ there. Acceptance isn't even in my vocabulary. I care what no one thinks. It has always been you c'hawks talking about what is best for the group, an alleged concern for everyone, attempting to make your own group, even pleading for members. Once again, for you double digit IQ holders,

"Don't know. Why did you stick your nose in the thread in the first place if you had nothing to add when the topic was clearly the amp?"

---
because i watch how you post and figured that was the thing to do put my nose where it don't belong

"Oh, you mean bustng you out as a troll and multiposter? Simple answer to that. Stop doing it. But that's not really the reason, now is it? I must have trounced you before which is why you disappeared and came back with another nic, You're hiding, and since you are so partial to what the group thinks, EVERYONE knows it."

Just like you twisite.

"Hell, I knew you guys were struggling to emulate me, y;all been doing it for months. Problem is, ya' can't, you're stuck with yourself and can't stand it. But thanks for admitting it afterso many denials."

"If only you had a clue what your answers mean to me."

---
kinda like what your last breath will mean to me.

"Yup, I trounced you somewhere. Probably with your wannabe rf theory."

"Cross eyed? Whatever gave ya' that idea? I may wear a patch and be thinning, but I can see just fine."
"No. You said you had a liason with him. Even thought I was prying into y'alls affair when the only thing I asked about was the amp."

Snapper Head your lying again. Post where i said anything even remotely close to what you just said.

"You posted it. Look at the post you crying about alluding about something in private with Adair. Who brought that up? You did. I was asking about an amp and you went off on a tangent about some private thing you had with Adair. All I asked about was an amp that he said can do 110 watts alll day long and that he knew the builder really well and you came running like a lost pup, crying "me too twisted, me too, look at me, please pay me some attention. I must have killfiled you which is the reason for you hiding."

You can't thats why you are a loser No one is on your side, they may not like doug but that doesnt mean they are sideing with you. No one has stuck up for you. Face it your a Loser, that lies for acceptance. And no one will accept you.
"You may have a tumor from all that rf theory you self profess you are so great at. I repeated myself concerning my cares many times. Your deficiency will not allow your brain to accept that someone finds you trifling, and that your opinion is equated with the matter in the waste tank on this loser's boat."

"And with that, you are in the troll zone. I made no accusations, but have fun with yourself. And I will be certain to post whenever you spoof again. Go back and learn some RF theory, little man."

You have made plenty of false accusations that about it, open your mouth I am gonna spoof in it again. Any time you want to talk rf fliptwig, I see you avoid that subject like the plague.
http://www.qei-broadcast.com/

"If you truly want to debate RF theory, show yourself so I can make the entire world laugh as I slam dunk your "knowledge." Otherwise, you have nothing to say or prove, except that I already hammered your BS once, which is why you are in hiding. Come back when you grow a full set. I don't argue with frightened children in halloween costumes."

You know, I'll tell you that I and others we're
wrong to start unloading on you the way we did.
But on the same page when someone goes to a drag
race, starts to tell all the people that have "illegal"
cars for the road to get them off the road, well
what kind of reaction did you think you would get.
If the only kind of post you and others can make
about people is accusations about someone's sexual,
political, intellectual, social habits and character, well
why are you people on a cb group?

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting

pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

<theyLAUGH@you.com> Subject: No one is crusading for
anything...you twits do not comprehend, that's all! Group:
rec.radio.cb X-User-Info: 207.155.223.119 207.155.223.119 Date:
Wed, May 23, 2001, 2:35am (EDT+4) X-Trace: 23 May 2001
02:35:46 GMT, 206.53.132.39
The ONLY thing being campaigned for is to get you keyclowns to piss and
moan. Boy oh boy do you do it.
Time and again the AntiKeyclowns have stated that all they want to do is
make you use bandwidth.

"Guess what, Adair? This is a cb worldwide ng. We'd use it anyway. You
think you are responsible? Christ, are you warped."

Time and again you do so.

"Well, uh, we did it before you were here. What makes you think you are
responsible for anything except what we respond to and allow?"

I have read

"Didn't think you could. Thought all you could do was call names of a
sexual nateure to all cbers who disagree with you."

at least 2 dozen posts over the last 4 months that said they felt your
bitching and insult trading was funny and accomplished the intended
purposes.

"And the world has read thousands of posts by people who know nothing of
you other than what they read, and correctly concluded that you are
unemployed, sexually deviated, low IQ, a liar not only about where you
are but about your radio activities as well, not accepted by fellow
hams, and outsmarted by common cbers."

What I am wondering is why do you keyclowns indulge them?

I read posts by one keyclown here that always have something to do with
"credibility".

"Of course you would mention that. That's the big, fat, sore spot I used
to strip you of any dignity you may have had left after you shot your
mouth off in here. Forget it. You aren't even getting out of the gate on
this one. I told you back when you waddled in here that you were going
to lose it here forever and never get it back. Deal with it."

Do you not understand that your issues are not their issues, and that they do not care?

"Now you are beginning to maybe get a grip. You and your two loser pro-homo posters are the only ones concerned with what ANY one thinks. You are concerned with where we talk, how much power we use, etc., etc., The rest of us care nothing about any of this. We are here for our own enjoyment, not to win a popularity contest or make friends or (LMAO) worry about what others (especially you and your dinks hiding) think when we post. Thats your deficiency, not ours."

Someone here called you keyclowns "large mouth bass". Very apt.

"And you have been called many names on here by good people, every one of them fit. Your nose problem still remains. You can not get past the fact that us cbers don't hold you in some regard as you thought we would. Your problem is you are a minority (wannabe) here and can't stand it. Thought that ticket was going to give you instant status among cbers..hehehe...you can't handle reality."

Who cares this is a CB News Group not a computer one.Why dont you and all the cry babies that cry about Illegal radios and Amps start your own News Group.

"Well, they tried. Sparky said he was going to several times when he was overcome with rage a few times. Once, he was so anger he pleaded for members, but no one followed, so he escalated his trolling. That was his moment of realization that Adair was the closest thing he could refer to a friend on here and no one else cared. Suffered quite a blow to his ego, he did that day."

This would leave the people that like to talk about tech problems wich concern Amps and Export radios to do that.I havnt seen any Tech Questions in this News Group.The only posts are from cry babies this radio is Illegal this Amp is Illegal wa wa wa.Maybe if you put that mich time in with your family or maybe a job if you have one that would help you alot more than posting garbage on a News Group.Lets take a vote and see who wants to keep reading all this baby crap every day.If you want to cry so much why dont you put it to good use like gas prices,drug abuse,and Gang problems.Wow look that could do some good but keep it off this News Group.Or is it that you like to hide behind a computer in your little dark room with your legal CB Radio and cant function in the real world?

"Bingo."

Ok Mr. anonymouse (no typo). Where did you get this lovely bit of
information?

HDTV frequencies are going to be the same as the current UHF (mostly)
frequencies. There will be NO HDTV frequencies in the HF band. That would
be stupid. That's why there is no longer a TV channel 1. It was originally
on 44 MHz and because of skip it was eliminated.

I can see why you made this into an anonymous post, you are too ashamed to
identify yourself.

Kevin, WB5RUE
Everyone is entitled to be stupid occasionally, but some abuse the
privilege.

LANDSHARK: (lisping) Oooh the horsradish is sssimply wonderful!

"It's not a recipe. You really don't read the topics do you? Maybe you should pay a little more attention to the technical side of things instead of swearing and calling names here so much. The "recipe" is code for sophisticated radio mods, one that certain no coders will ever be able to decipher. It is a well kept secret."

2729. Re: What's all this header/IP stuff?

Newsgroup: rec.radio.cb
Date: 2001-05-23 16:38:23 UTC
From: twistedhed@webtv.net
Message-ID: <12208-3B0BE77F-22@storefull-122.iap.bryant.webtv.net>
Source record: 83136

You asked nicely, so I'll answer nicely. At work, where I am at the moment, I post via google. When I'm home, I post via my ISP's Newsgroups feature under internet options. That's two, NOT three. I have in the past used the 11 meter call SSB411D, but since getting my ticket I hardly ever use that anymore. It all still looks a little like gobble-de-gook, TCPIP was never my forte.
Funny thing is that with google, it takes 3 to 6 hours to post. Sometimes toward the end of the day, I'll post with google and go home and post with CompuServe and actually beat my earlier post in. So there you have it, close but no cigar. If you have software like PH that deciphers this stuff and it tells you that I've posted three different ways, it's wrong. Also, doesn't nic stand for network interface card?...I'm Novell certified, but my present position is that of systems programmer analyst. I probably couldn't administrate a network to save my life now without some serious review. Like I said before, TCPIP is definitely NOT my forte. Like the old commercial said, "that's the stooory!" (I think I just dated myself.)
73 de Bert
KC2HMN

"Ah hell, I ain't worried about the age thing. We're all getting sort of "dated". Many of us pay careful attention to the headers because, well, if you read more than a few posts here, you know why. But yea, it did, say that. Castillo, Katekebo@yahoo, and now this one all match. In any event, thanks for clearing it up. I am certain you meant no malice, and I apologize if I put you on the spot, I mean no ill will. Have a good day."

This sounds like FAGS

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity.."

Sounds good but a patty melt is no more than a little seasoning to the meat, a toasted bun and a lot of cheese, mind you it is good but nothing like a prime or angus ribeye (probably known of as a Delmonico in Spokane) seared over a REAL hot mesquite fire, smothered with a bourbon glaze made with roasted garlic and mushrooms that have been saut&#65533;ed in the fat from the ribeye trimmings and for a side try butter and dill fried new potatoes and some grilled asparagus, MMM Good. Enjoy this with a fresh jalapeno or habanera pepper and decent red wine and now you have something that will make the American Heat Association come a running. Not that yours does not sound tempting but my pallet disagrees with curry and fried chicken is very common where I am from, I give you credit though, at least you noticed that most people cannot make the perfect fried chicken. Another food I forgot to mention was a huge list of Tex-Mex food.

Wait just a godamm minute. What's so "wrong" about flood posting?

*We admit maybe it's against the rules - but there's no need to call us criminals for it.

*Rules against flood posting are trivial. No one pays attention to them. Except dorks like you. Get a life!

*There will always be some people who choose to not obey ISP rules. You can't stop it - so why whine about it in the NG?

*You have probably broken some ISP rules before so how come you're all HOLY all of a sudden? Hypocrite.

*Why not go after the REAL problems on the Internet - like porn and fraud - and leave us flood-posters who bother no one (except you) alone?

>I'm sure So I'm serious

If you could drop me an e-mail when that 2547 becomes available, I'd appreciate it. Truth's I don't need it but my very first rig was a Galaxy and it'd be nice to have a LEGAL rig of the same brand in the shack. So I'm doing a little comparison shopping. Thanks, take care, and 73.

As noted by the other posters, not only does such an animal not exist in the form of an HT (it might be possible on some newer Amateur HF-UHF gear, but using same would be against both FCC and FAA regulations...) As Moparholic posted: 'if he's a pilot, he ought'a know better'. His plane would not pass a flight inspection without proper 'approved' type-accepted radios aboard.

Nah. A -real- patty melt uses sauteed onions, swiss cheese and a good
deli rye (not dill rye). In just the right porportions it makes a
blend with a truly unique taste.

Nice analogy. Drag races are permitted under controlled conditions,
and not on public throroghfares. They don't continue 24/7. They don't
race next to someone's house (without warning). They don't interfere
with the rights of others. They don't cause interference to the TV and
radio. And they don't warrant a $17k fine.

I guess your analogy doesn't quite meet the same criteria as radio
piracy, does it?

It ain't exactly a military secret if you know how to use QRZ.com.
Birthdates are being replaced as the second id on Federal license records as
they are renewed but mine is right out there.

The copper shortage was so bad that the uranium separation facility in Oak
Ridge TN was wired in Treasury silver.

The reasons for the shortage and the mathematics to solve the matrix were
not developed (along with the computer to do the grunt work) until well
after the war was over. It boiled down to two facts:

1) copper is in everything or the process that makes it.

2) Most of the annual usage of copper is from recyled metal so the ramp up
in WW2 put one hell of a strain on copper mines which required copper to
make more.

So in 1943 we made do with steel pennies.

Dick N&#65533;BK

Hi Doug,
Why do you have so much hate in you?
I mean, if anyone can be an a hole, it can be
me, but you have one hell of an amount of
hate in you.
Have you thought about counseling? It
might help you.

The :Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Date: 1999/06/25

Hi all....

This is a NO BS NO SCAM DEAL....AND IT IS FOR HAMS ONLY!

My company is 20 years old and we sell computer parts and Microsoft products at
wholesale to re-sellers. There is an even chance you have a product from Amax
if you patronize your local computer shop.

I am a salesman for Amax and I am offering to sell either built systems or
components to hams at the price we sell them in quantity 50 lots to resellers.
This is for real, and so am I.
I am offering this not to make money but as a way to repay the ham community for the TONS
of help I have gotten since I got in this hobby.

Go to www.amax.com and check out the stuff there....

Then call me in the Chicago office at 888-810-2629. I am at extension 106.

Our Illinois location has some pricing at
http://people.ce.mediaone.net/amaxil
but it is kinda old pricing. You can call me for deals, but an email to
Doug_Adair@amax.com is best.

73 and CU ON 6 METERS!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Message-ID: <3b0c3d71$1@news2.mibx.net>
Source record: 83080

Twistedhed, you pathetic, delusional, Jack Daniels-guzzling dock bum.

You obviously DON'T GET IT. So let's break this down Big Bird style for you.

1. You are a homosexual. (HEY! NONE OF YOUR BACKTALK NOW. IT'S TRUE AND YOU KNOW IT IS! IF YOU WANT US TO GIVE AWAY WHAT HAPPENED THAT TIME IN SAN FRANSCISCO THEN JUST KEEP UP YOUR GUFF, FAGBOY) As a fag, you must expect and *tolerate* ridicule, especially if you CHOOSE to hang out in a newsgroup populated by rough, tough, he-men outlaw CBers and their detractors. So unless you move to alt.homosexual, you are going to get pushed around here. You may as well accept it and be at peace with it.

2. We DO NOT CARE WHAT YOU POST...or say...or do. We will be here ANYWAY....laughing at you and your wildly hilarious attempts at the English language. Sometimes we will reply to your pathetic bleatings, other times, not.

3. Doug is not here. If you paid attention at all, you could tell the difference when he shows up. Others can. You - Mr. DimBulb - can't.

4. You are obsessed (in a homosexual way) with Doug Adair. We suggest you write to him at n8wwm@arrl.net and pour out your lovesick longings. He may have time to write back and tell you to go to hell or give you instructions on how to slash your wrists. Imagine: you can stroke your little weenie while you read his reply.

5. No matter what you do or say or think, or how many illegal thugs try and stop us, WE WILL STILL BE HERE. Illegal CBers SUCK and WE ANTIKEYCLOWNS ARE -NEVER- GONNA LET YOU FORGET IT.

THE BEAT GOES ON!

Please NOTE, at the time of manufacture they were type accepted.
Just because the current models are of different acceptance, doesn't make
the older models "illegal". So quit being a FUCKING JERK-OFF!!!!
Anyone that believes this Fuck stick, well you had better go turn yourself
into the F.C.C. Stand in line with the tens of thousands of other people
that have older 23 channels CB's. They were legal then, they are legal NOW!!
Go to the F.C.C. web site, there is no single document on it to say that
"If you have a older type accepted C.B., you must not use it" Go Fuck
yourself...................

I am thinking of digging a pond, I am already planing a bunch of trees, maybe even an orchard, I have considered turning part of it into a wildlife refuge, I have some friends that are part of the "Pheasents Forever" group to repopulate the birds into our area.

Sorry I missed it, I'll have to keep an eye and ear open for some more hamfests in he area, is the one in Findley already over with for this year?

I think his point John, was that if you don't
link what you're reading, take a hike. If he is
invading on you're freq. band, then you have the
right to moan & groan about it. I personally don't
give a SHIT about you or most other Cb'ers. If I knew
you, or you had something to contribute other than
crying and whining about "Linear" "Outbandders" then
I might give a shit about you. But otherwise you
could die right know and I wouldn't loose a second
of sleep.
So quit you're whining about "Legalities" and contribute
something along the lines of " A superior antenna system would
serve you better than a linear" or " I don't approve of the use
of linears, but I can tell you how to get the most out of what
you have" Then a lot of others might not harp about you as
much.

You do sound just like a "HALL MONITOR BOY"

banders
should be caught and fined. WHAT A FUCKING HYPOCRITE!!!!!!!
Now that laws are being passed that could effect YOU, whether or
not you are doing anything wrong, you start whining. You come on
this newsgroup several months back PREACHING part 95. of the F.C.C.
and posting statements every time someone asked "About my linear"
or "how do I mod my 148" and your classic response "It's illegal
see part 95." or "It's against federal law to mod that, and big fines
and or jail" Now that they are going to pass laws that will screw you
too, you start this whining..... Go fuck yourself, you live
with what's been created, whether you like it or not, but stop
being such a hypocrite and whiner.
I hate dirt bags like you and your Butt brother Joe, I would
thoroughly enjoy just keep this going for a long time.....

Oh you sound just like
a CBer. "I'll be around for ever" The last person that
said that on the air was so stupid that he was walking
on the train track while listening to his walkman. The
train was coming down the tracks, blew his horn, so
what did this "Cber, who will out live everyone" do....
Jumped over to the other track...........To which a
north bound train promptly scattered him all over
the place. The lesson we learn from this story is.......
Next time you place you're order, don't forget to say,
NO ANCHOVIES PLEASE!!!!!!

The Landshark

P.S. you're still a fucking dick, please die now.........

I would think he or anyone else would be
proud to serve their country in an honorable
way. You on the other hand served the Navy well
Joe ..... While the ships were in port in
San Diego, I heard you were taking care of all
the young sailors you could. Don't worry Joe,
those stretch marks around you're check can be
corrected with cosmetic surgery.

Yes it is, and so is copulating another male in most
states is illegal too but have you stopped doing that yet?
Of course not.......

The Landshark

--

And to those last two posts I respond with twistie's favorite quote:

>"Sexual inadequacies and homosexual tendencies he fails to suppress
>manifest as sexual oriented insults directed toward others with whom he
>feels threatens him the most (IE: his definition of what a real man is,
>resulting in a state of envy, for it is an unrealistic goal of
>attainment for him to regard himself as a real man, due to, more likely
>than not, confusion among his own sexual identity.."

Hey, I didn't write it. But it fits.

is it true that the new radios with grey mic keys will not accept a power mic. i have a cobra power mic from an old radio and was going to buy a cobra 19 for my pick up but noticed the mic on the new radio had a colored ptt button. what does that mean. i thought someone told me in the past these radios would not take a power mic. any thought or facts.

FACTS: Do NOT buy a Cobra 19. Get a Uniden Pro-510 instead. The power mic does NOT make you any louder. Grey means HIGH Impedance as compared to the older Low Impedance. One mic will work on the other but the other won't work on the other IF switched! Keep the mic with the radio---don't do like a lot do with them and move the mics around! E mail me with any other questions.

>cars for the road to get them off the road, well
>what kind of reaction did you think you would get.

Nice analogy. Drag races are permitted under controlled conditions, and not on public throroghfares. They don't continue 24/7. They don't race next to someone's house (without warning). They don't interfere with the rights of others. They don't cause interference to the TV and radio. And they don't warrant a $17k fine.

I guess your analogy doesn't quite meet the same criteria as radio piracy, does it?

> If the only kind of post you and others can make
>about people is accusations about someone's sexual,

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the sliced onion on the roast. Place the roast on a rack in a roasting pan. Roast in a preheated 450F oven for 20 minutes. Reduce the oven temperature to 325F and roast 1 hour more. Reduce the oven again to 300F and roast about one hour more or until the beef registers 115F for rare in the center when tested with a meat thermometer. Remove from the oven and allow to stand 15 minutes in a warm place. Slice and serve immediately with Wine Sauce for Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan. Simmer, uncovered, until reduced to 2 cups. Add any pan drippings from the rib roast to the sauce. Strain the sauce and skim off as much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a salad and rolls.

And your point is Doug,
I admit it, I've never said I didn't, but at the same
time I didn't go flooding the newsgroup with this crap.
Also I have pacbell, so maybe that's not me, do
a search see if that address leads back to Pacbell.
Just like all the whinnying about owning a linear, I
have never said whether I was a ham either, or
did I, I'm sure you and your alter egos will find
something. Just like I have on you.....

A final
comment ----------
---------- OVERVIEW There are few things in life as good as your own herb,
grown by yourself at home out in the garden and indoors in pots... Oregano,
Dill, Basil, Sage and other herbs are all easy to grow. Mint will take over
the whole yard if you let it. Fresh mint and celantro are incredible in
salads and oriental dishes. But it all comes down to a truly motivational
herb that is your friend and mine, a great healer and teacher to those that
know it well. Most people think of gardens as a seasonal, yearly project,
but it's actually less time consuming and more rewarding to keep the garden
going year round. If one were to attempt to grow year round, indoor
gardening techniques will be needed at least during winter to keep the
garden producing. You will have herb fresh at all times, there is no worry
of mass storage thru the winter and spring, it requires less space, and once
established, requires only minimal attention every week to keep it producing
at optimal levels. The best part of being a gardener is it connects you to
the earth. It connects you with nature, and is spiritually enriching. Try
giving your plants energy by beaming good thoughts and energy at them every
time you visit them. I find this helps me as much as it helps them; my
plants seem to respond to it favorably. GENETICS AND THE PLANT It's very
important to start with good genetics. You should attempt to find seeds from
local gardeners that are acclimated and bred for local climate and best
floral characteristics. Potency, aroma, fast growth, early maturation,
resistance to fungus and pests. All of these factors are considered by the
seasoned gardener and you will benefit enormously by finding a friend to get
you started on the journey that never ends... Attempt to find an
Indica/Sativa hybrid if possible, as this will have the best high and good
characteristics for indoor growth as well. Indica plants have a heavy, stony
high that is tiresome, and sativas' are hard to grow indoors due to high
light requirements, and late flowering traits, so a hybrid can be bread that
will have the energetic, cerebral high of the sativa and the early
maturation tendencies of the Indica plant. The Indica plant is easily

recognized by its extremely broad leaves that are very rounded on the sides. The Sativa has very narrow, finger-like leaves. A hybrid will have qualities of both and have leaves that are a cross of these two types, thinner than an Indica, but much broader than a Sativa. It is possible to recognize a good hybrid by the leaves once you know what to look for. Look for seeds that are dark brown or light grey. Some may have dark lines inset into these colors, like tiger stripes. White, small seeds are immature and should not be planted. INDOORS & OUTDOORS - CONSTANT HARVEST STRATEGY One of the best solutions to energy verses output for most home gardeners is to use outdoor light for flowering and use continuous light indoors for germination and vegetative growth. This will take advantage of the natural light/dark cycle and cut your energy use in half compared to the same operation indoors. A small greenhouse can be built of Filon fiberglass or PVC sheets that is innocuous and looks much like a storage shed or tool shed so it's not likely to raise suspicions. In fact, a large shed of metal or plywood can be modified with a luminous roof of PVC, glass, fiberglass or plastic sheet, and some strains that do not require a great deal of light will grow well. Such a shed will discourage fly-by sightings and keep your business your own! It also allows you to keep out rats and gophers, keeps out the neighbor kids, and can be easily locked up. It will also give you an opportunity to actually plant in the ground if you desire, and this is the best way to avoid root-bound plants (if your not using hydroponics), and get bigger harvests. In winter, indoor space is used to start new seedlings or cuttings to be placed outside in the spring, using natural sunlight to ripen the plants. This routine will provide at least 3 outdoor/greenhouse harvests per year. If more space is available to constantly be starting indoors and flowering 2nd harvest plants outdoors, harvests are possible every 60 days in many areas, with a small indoor harvest in the winter as a possibility as well. The basic strategy of year round production is to understand the plant has two growth cycles. At germination the plant enters into a vegetative state and will be able to use all the continuous light you can give it. This means there is no dark cycle required. The plant will photosynthesis constantly and grow faster than it would outdoors with long evenings. Photosynthesis stops during dark periods and the plant uses sugars produced to build during the evening. This is not a requirement and the plant will grow faster at this stage with continuous photosynthesis (constant light). Once the plant is 12-18" tall, weather permitting, it can be forced to start flowering by placing it outside in the Spring or Fall. (For Summer outdoor flowering, the night must be artificially lengthened in the greenhouse to "force" the plants to flower. See FLOWERING chapter.) Moving the plants to 10-13 hour light periods (moving it outside) with uninterrupted darkness (no bright lights nearby) will force the plant to flower. It will ripen and be 2-3' when ready to harvest. When a plant is moved from continuous indoor light to a 10-13 hour day outside, it will start to flower in anticipation of oncoming winter. Vegetative starts moved outside March 1st, will be ripe by May 1. Vegetative starts moved outside on May 1 will be ripe by July 1. Starts moved outside Sept 1 are picked by Nov. 1st. In Winter, operations are moved indoors and a crop is planted for seed in anticipation of planting outdoors the next summer, or just for some extra winter stash. Keep in mind

that the "man" is looking for plants in the Sept./Oct./Nov. time-frame, and may never notice plants placed outside to flower in April. Be smart, make your big harvest in May, not October! PLANTING INDOORS A small indoor space should be found that can be used to germinate seeds; these vegetative starts are placed outside to mature in the spring after last freezes are over. The space can be a closet, a section of a bedroom, a basement area, an attic or unused bathroom. Some people devote entire bedrooms to growing. The space must be light leak proofed, so that no suspicious light is seen from outside the house. This could invite fuzz or rip-offs. The space should be vented. Opening the door of a closet can be enough ventilation if the space is not lit by big lights that generate a lot of heat. Separate exhaust and incoming air vents are best. One at the top of the room to exhaust air into the attic or out the roof, and one to bring in air from an outside wall or under-floor crawl space. Use fans from old computer cabinets, available from electronic liquidators for $5 each. Dimmer swithes can be used to regulate the speed/noise of the fans. Use silicon to secure the fans to 4-6" PVC pipe pushed thru a round hole cut in the floor and ceilings. Use lots of silicon to damp the fans vibrations, so that the walls do not resonate to the fans' ocsilations. Line the walls with aluminum foil, dull side out to diffuse the light and prevent hot-spots, or paint the walls bright white to reflect light. Aluminized mylar, 1 mil thick is best.($20 for 25 feet of a 4' wide roll.) Mirrors are not good to use, since the glass eats light! Line the floor with plastic in case of water spills, etc. Set up a voltage interrupt socket and be sure the electrical wiring will handle the lamps your going to use. Always place ballasts for HID lamps on a shelf, so they are above floor level, in case of water spills. Spacers place on the floor under a ballast will work too. A shelf above the main grow area can be used to clone cuttings and germinate seedlings. It will allow you to double the area of your grow space and is an invaluable storage area for plant food, spray bottles and other gardening supplies. This area stays very warm, and no germination warming pad will be needed, so this arrangement saves you $. Hang a light proof curtain to separate this shelf from the main area when used for flowering. This will allow constant lights on the shelf and dark periods in the main grow area. Velcro can be used to keep the curtain in place and ties can be used to roll it up when tending the garden. Black vinyl with white backing works best. Now you need light. A couple of shop lights will be fine if you just want to start plants inside and then take them outside to grow in a small greenhouse. They can be purchased with bulbs for about $10 each, or without bulbs for around $8. Try to find them on sale. Use one Cool White and one Warm Light type bulb in each to get the best light spectrum possible for plant growth. Do not use expensive Grow Lux type bulbs, as they do not put out as much light, and therefor do not work as well in most situations (go figure). If Cool White is all you can find, or afford, use them. They work fine, and are by far the cheapest.(About $1-2 each.) SHELF GROWING Shelf gardening with fluorescents may be the trend of the future, since the materials are so inexpensive, and easy to obtain. Fluorescent lamps are great for shelf gardening. In this system, many shelves can be placed, one above the other, and fluorescent lamps are used on each shelf. Some shelves have 24 hour lighting, some have 12 hour

lighting (for flowering). Two areas are best, perhaps with one other devoted to cloning and germination of seed. Shelf gardening assumes your going to keep all plants 3' or shorter at maturity, so all shelves are 3-4 feet apart. Less light is necessary when you have plants that are this short and forced to mature early. One drawback to a shelf garden like this is that it is very time consuming to adjust the lamp height every day, and it is harder to take a vacation for even a week with no tending of the garden. This applies mostly to the vegetative stage, when plants are growing as much as an inch per day. Lamps on the flowering shelves are not adjusted nearly as often. Normally, the lamps should be kept within 2 inches of the tops of the plants, with the plants arranged such that they get progressively taller as the end of the lamps go up, so that all plants are within this 2" range. This is an ideal however, and if you do go on vacation, adjust the lamps so that your sure the plants will not be able to grow up to the lamps within that length of time. If enough flourecents are used to completely saturate the shelf with light, the spacing issue will not create spindly plants. They will mearly grow a little slower if the lamps are not very close to them. An alternative is to use fluorescent lamps for cloning, germination and early seedling growth on the top shelf of a closet, then switch over to HPS for heavy vegatative growth and/or flowering in the main closet area. Position the HPS such that it won't need adjustment, at the top most possible point in the closet or room. Most HPS installations will not require lamp height adjustment. Just attach the lamp to the underside of shelf or ceiling as high as possible, and if you want to get a few plants closer to it, put them on a temporary shelf, box or table to get them closer to the lamp. A shelf is all that is necessary with this type of setup, preferably at least 18" wide, up to about 24" maximum. This area must be painted a very bright white, or covered with aluminum foil, dull side out to reflect light back to the plants. (Dull side out prevents hot-spots; diffuses light better.) Paint the shelf white too. Or, use aluminized mylar, a space blanket, or any silvery surface material. Do not use mirrors, as the glass soaks up light. Hang shop lamps from chains and make sure you can adjust them with hooks or some other type of mechanism so they can be kept as close to the plants as possible at all times (1-2"). If the lamps are too far from the plants, the plants could grow long, spindly stems trying to reach the lamp, and will not produce as much bud at maturity. This is due to internode length being much longer. This is the length of stem between each set of leaves. If it is shorter, there can be more internodes, thus more branches, thus a plant that provides more buds in less space at harvest time. Shelf gardening is sometimes referred to as Sea of Green, because many plants are grown close together, creating a green canopy of tops that are grown and matured quickly, and the next crop is started and growing concurrently in a separate area of continuous light. Clones are raised in a constant light shelf, until they start to grow well vegetatively, then placed on a 12 hour per day shelf to flower. LIGHT Indoors, 2000 lumens per sq. ft. is about as low as you want to go indoors. If you get under this mark, plant growth will certainly not go as fast as possible, and internode/stem length will increase. Also, light distance to plants will be much more critical. Daily adjustments to the lamps will be necessary, meaning you get no vacations. 2500 lumens psf

should be a good target, and 3000 is optimal if your going to inject or enrich CO2 levels (more on that later). High Intensity Discharge lamps are the best solution for most indoor growers. HID lamps come in 3 basic flavors: High Pressure Sodium (HPS), Metal Halide (MH) and Mercury Vapor. Metal Halide is an improved spectrum, higher intensity Mercury Vapor design. HPS is a yellowish sort of light, maybe a bit pink or orange. Same as some street lamps. HPS lamps can be used to grow a crop from start to finish. Tests show that the HPS crop will mature 1 week later than a similar crop under MH, but it will be a bigger yield, so it's better to wait the extra week. The easiest HID to buy, and least expensive initially are the flourescent and mercury vapor lamps. MV will put out about 8000 lumens per 175 watts, and 150 watts of HPS puts out about 15k lumens, so HPS is almost twice as efficient. But the color spectrum from MV lamp output is not as good. HPS is high in reds, which works well for flowering, while the Metal Halide is rich in blues, needed for the best vegetative growth. Unfortunately, MV lamps provide the worst spectrum for plant growth, but are very inexpensive to purchase.They are not recommended, unless you find them free, and even then, the electricity/efficiency issues outweigh the initial costs saved. 400 watt HPS will output around 45k lumens. For every 500 watts of continuous use, you use about $20 a month in electricity, so it is evident that a lamp taking half the power to output the same lumens (or twice the lumens at the same power level) will pay for itself in a year or so, and from then on, continuous savings will be reaped. This is a simple initial cost vs. operating costs calculation, and does not take into account the faster growth and increased yield the HPS lamp will give you, due to more light being available. If this is factored into the calculation the HPS lamp will pay for itself with the first crop, when compared to MV or fluorescent lamps, since it is easily twice as efficient and grows flowers faster and bigger. Lamp Type Watts Lumens per bulb Total efficiency Fluorescent Bulb 40 3000 400 watts = 30k lumens Mercury Vapor 175 8000 400 watts = 20k lumens Metal Halide 400 36000 400 watts = 36k lumens High P. Sodium 400 45000 400 watts = 45k lumens Notice the Mercury Vapor lamps are less efficient than the fluorescent (FL), and can not be positioned as close to the plants, so the plants will not be able to use as much of the MV light. The light distribution is not as good either. MV lamps simply are not suitable for indoor gardening. Use flourecent, MH, or HPS lamps only. Halogen arc lamps generate too much heat and not very much light for the wattage they use, and are also not recommened, even though the light spectrum is suitable for decent growth. There is a new type of HPS lamp called Son Agro, and it is available in a 250, 1000, and 400 watt range. The 400 is actually 430 watts; they have added 30 watts of blue to this bulb. It is a very bright lamp (53k lumens) and is made for greenhouse use. These bulbs can be purchased to replace normal HPS bulbs, so they are an option if you already own a HPS lamp. The beauty of this bulb is that you do not give up most of the advantages of MH lamps, such as minimal internode spacing and early maturation, like most HPS users do, and you have all advantages of a HPS lamp. One bulb does it all. Internodal length of plants grown with the Son Agro are the shortest ever seen with any type of lamp. Plants grown under this lamp are incredibly bushy, compact and grow very fast. Son Agro

bulbs however, do not last as long as normal HPS bulbs. There is something like a 25% difference in bulb life. Metal Halide (MH) is another option, and is available in both a 36k and 40k lumen bulbs for the 400 watt size. The Super Bulb (40k) is about $10-15 more, and provides an extra 4000 lumens. I think the Super Bulb may last longer; if so, that makes it the way to go. Halide light is more blue and better than straight HPS for vegetative growth, but is much less efficient than HPS. It is possible to purchase conversion bulbs for a MH lamp that convert it to HPS, but the cost of the conversion bulb is more expensive than the color corrected Son Agro bulb, so I would recommend just buying the Son Agro HPS. Even though it costs more initially, you get more for your energy dollar later, and it's much easier to hang than 10 fluorescent tubes. If you have a MH 36k lumen lamp burning at 400 watts and a 53k lumen HPS burning at 430 watts, which is better efficiency wise? Which will provide a better yield? Obviously, the Son Agro HPS, but of course, the initial cost is higher. Actually, the ballast will add about 10% to these wattage numbers. The Son Agro bulb will prove much better than the MH for any purpose. The MH bulb does not last as long, but is cheaper. Compare $36 for a 400 watt MH bulb vs. $40 for the HPS bulb. Add $15 for the Son Agro HPS. The HPS bulb life is twice as long. 10k hours vs. 21k hours. The Son Agro is 16k hours or so. Still, longer bulb life and more light add up to more for your energy dollar long term. Horizontal mounting of any HID is a good idea, as this will boost by 30% the amount of light that actually reaches the plants. Most HID's sold for indoor garden use these days are of this horizontal mounting arrangement. HPS is much less expensive to operate than any other type of lamp, but comes in the 70 watt size at the home improvement stores. This size is not very efficient, but blows away FL in efficiency, so they might be an alternative to FL for very small operations, like 9 sq. feet or less. Over 9 sqr. feet, you need more light than one of these lamps can provide, but you could use two of them. 70 watt HPS lamps cost about $40 each, complete. Two lamps would be 140 watts putting out about 12k lumens, so it's better than FL, but a 150 watt HPS puts out about 18k lumens, the bulb life is longer, bulbs are cheaper and the lamp more efficient to operate. The biggest problem is that the mid size lamps like the 150 and 250 watt HPS are almost as expensive to buy as the larger 400's. For this reason, if you have room for the larger lamp, buy the 400. If your going pro, a 1080 watt model is available too, but you might find there is better light distribution from two 400's rather than one large lamp. Of course, the two smaller lamps are more expensive to purchase than one large lamp, so most people choose the larger lamp for bigger operations. Heat buildup in the room is a factor with HID lamps, and just how much light the plants can use is determined by temperature, CO2 levels, nutrient availability, PH, and other factors. Too big of a lamp for a space will make constant venting necessary, and then there is no way to enrich CO2, since it's getting blown out of the room right away. Bulb Costs: the bulb cost on the 70 watt HPS is $24, the 150 is only $30, and the 400 is only $40. So you will spend more to replace two 70 watt bulbs than you will to replace one 400 watt HPS. (Go figure.) Add that up with the lower resale value on the 70's (practically nothing) and the fact that they are being modified and are not suited to this application, and it becomes evident that $189 for a 250

HPS lamp, or $219 for a 400, might just be worth the price. Keep in mind that for $30 more, you can have the larger lamp (400watt) and it puts out 20k lumens more light than the smaller lamp. Not a bad deal! Here is the breakdown on prices (from memory): Type Complete Cost Bulb Cost Bulb Life Lumens HPS 400 $219 $40 18k hours 50k MH 400 $175 $37 10k hours 36k Son Agro400 $235 $55 15k hours 53k Super MH400 $190 $45 ?? 40k MH 250 $149 $32 ?? 21k HPS 250 $165 $36 ?? 27k HPS agro250 $180 $53 ?? 30k MH 150 $139 $25 ?? 14k HPS 175 $150 $30 ?? 17k If your looking for these types of lamps, look in the Yellow Pages under gardening, nursuries, and lighting for indoor gardening stores in your area. SEA OF GREEN Sea of Green (SOG) is the theory of harvesting lots of small plants, matured early to get the fastest production of buds available. Instead of growing a few plants for a longer period of time, in the same space many smaller plants are grown that mature faster and in less time. Thus, less time is required between crops. This is important to you when the electricity bill comes each month. One crop can be started while another is maturing, and a continuous harvest, year round can be maintained. 4 plants per square foot will be a good start for seedlings. 1 plant per square foot will allow plenty of room for each plant to grow a large top cola, but will not allow for much bottom branching. This is OK since indoors, these bottom branches are always shaded anyway, and will not grow very well unless given additional light and space. The indoor grower quickly realizes that plants that are too tall do not produce enough at the bottom to make the extra growing time used worth while. An exception to this rule would be if it is intended the plants are to go outside at some point, and it is expected that the light/shading issue will not be a factor at that point. The plants, if started at the same time, should create what is called a "green canopy" that traps most of the light at the top level of the plants. Little light will penetrate below this level, since the plants are so close together. The gardener is attempting to concentrate on the top of the plant, and use the light and space to the best advantage, in as little time as possible. Use of nylon poultry fence or similar trellising laid out over the green canopy will support the plants as they start to droop under the weight of heavy fruiting tops. Stakes can be used too, but are not as easy to install for plants in the middle and back of the room, where reach is more difficult. It's easy to want big plants, since they will produce more yield per plant, but it's usually better with limited space to grow smaller plants that mature faster and pack into smaller spaces. Sea of Green was developed in Holland. Instead of fitting 4 large plants in that small room, fit 12 small ones on a shelf above 12 other small plants. These plants take only 3-4 months to mature from germination to ripe buds, and harvesting takes place constantly, since there is both a vegetative and flowering area devoted to each, with harvests every 45-60 days. It's not the size of the plant, but the maturity and quality of the product that counts. Twice as many plants grown half as big will fill the grow space twice as fast, so harvests take place almost twice as often. Get good at picking early flowering plants, and propagate only those that are of the best quality. 6" square containers will allow for 4 plants per square foot. You may also gauge by the size of your growing tray (for passive hydroponics); I like kitty litter boxes. ($3 each at Target) Planted 4 per square foot, (for

vegatative seedlings) a 12 sq. ft. closet will hold 48 seedlings on one shelf. In my case, I use 4" rockwool cubes that fit into kitty litter pans @ 12 cubes per pan. I can get 5 pans onto a 12 sq. ft. closet upper shelf, so that is 60 seedlings on one small shelf! For flowering indoors, 1 plant per sq. ft. is a good rule of thumb for SOG. If less plants are grown in this size space, it will take them longer to fill the space, thus more electricity and time will be used to create the same amount of product. If more than one plant p.s.f. is attempted, the grower will soon find that plants thus crowded tend to be more stem than bud, and the total harvest may be reduced, so be cautious. It's good to avoid "topping" your plants if you want them to grow as fast as possible. It's better just to grow 2 or 4 times more plants, since they will produce more, faster, in the same space. Also, "training" plants with twist-ties is a great way to get them to bush out a bit. Just take any type of plastic or paper twist tie and wrap it around the top of the plant, then pull it over until the top is bent over 90-180 degrees and then attach this to the main stem lower on the plant. Do this for one week and then release the plant from it's bond. The plant can be trained in this fashion to take less vertical space and to grow bushier, to fill the grow space and force lower limbs to grow upward and join the green canopy. This technique takes advantage of the fact that if the top is pulled over, it creates a hormonal condition in the plant that makes it bush out at all lower internodes. Sea of Green entails growing to harvest the main cola (top) of the plant. Bottom branches are trimmed to increase air flow under the "blanket" of growing tops. Use these cuttings for clones, as they are the easiest part of the plant to root. It's also the fastest part of the plant to regenerate after flowering has occurred. GERMINATION Germinate seeds in sterile soil (for planting outdoors) or a hydroponic medium of rockwool or vermiculite. DO NOT (!) use a Jiffy cube #7 to germinate seeds. Informal tests and experience show these peat cubes do not work well and stunt the plants growth. Planting in vermiculite gives the seedling so much oxygen, and are so easy for roots to grow in, that the plants look large 1 week after germination! Keep them moist at all times, by placing seeds in vermiculite filled 16oz cups with holes in the bottom, placed in a tray of weak nutrient solution, high in P. Rockwool cubes also work extremely well. When the seed sprouts, place the rockwool cubes into larger rockwool cubes. No repotting or transplanting, and no soil mixing! You can germinate seeds in a paper towel. This method is tricky; it's easy to ruin roots if they dry out, or are planted too late after germinating. Paper towels dry out REAL FAST! Place paper towel in a bowl, saturated with weak nutrient solution (not too much!), and cover with plastic wrap to keep it from drying out. Put bowl in a warm area; top of the gas stove, water heater closet, or above warm lamps. Cover with black paper to keep out light. Check every 12 hours and plant germinated seeds with the grow tip up (if possible) in a growing medium as soon as the root coming out of the seed is 1/16" or longer. Use tweezers, and don't touch the root tip. Transplant as little as possible by germinating in the same container you intend to grow the plant in for a significant period of time. Just plant in vermiculite or rockwool. You will be amazed at the results! 90% germination is common with this method, as compared to 50% or less with Jiffy Cubes. (Your milage may vary.) 5-55-17

plant food such as Peter's Professional will stimulate root growth of the germinating seed and the new seedlings. Use a very dilute solution, in distilled water, about 1/3 normal strength, and keep temperatures between 72-80 degrees. Warm temperatures are very important. Many growers experience low germination rate if the temperatures are out of this range. A heating pad set to low or medium may be necessary, or a shelf constantly warmed by a light may do, but test it with a few seeds first, before devoting next years crop to it. No light is necessary and may slow germination. Cover germinating seeds with black paper to keep out light. Place seedlings in the light once they sprout. Plan on transplanting only once or twice before harvest. Use the biggest containers possible for the space and number of seedlings you plan to start. Plants will suffer if continuously transplanted and delay harvesting. You will suffer too, from too much work! 13 2-liter plastic soda bottles filled with vermiculite/pearlite will fit in a cat box tray, and will not require transplanting for the first harvest, if you intend to grow hydroponically. Transplant them for a second regenerated harvest. Cut holes in the bottom of containers and fill the last few inches at the top with vermiculite only, to start seeds or accept seedling transplants. Since vermiculite holds water well, wicks water well, but does not hold too much water, roots always have lots of oxygen, even if they are sitting in a tray full of water. A hydrogen peroxide based plant food is used to get extra oxygen to the plants when the pans are kept continuously full. The water can be allowed to recede each time after watering, before new solution is added. This allows the plants roots to dry somewhat, and make sure they are getting enough oxygen. Use SuperSoil brand potting soil, as it is excellent and sterilized. If you insist on using dirt from the yard, sterilize it in the microwave or oven until it gets steamy.(NOT RECOMMENDED) Sterilize the containers with a bleach solution, especially if they have been used a previous season for another plant. VEGETATIVE GROWTH Once sprouted, the plant starts vegetative growth. This means the plant will be photosynthesizing as much as possible to grow tall and start many grow tips at each pair of leaves. A grow tip is the part that can be cloned or propagated asexually. They are located at the top of the plant, and every major internode. If you "top" the plant, it then has two grow tips at the top. If you top each of these, you will have 4 grow tips at the top of the plant. (Since it takes time for the plant to heal and recover from the trauma of being pruned, it faster to grow 4 smaller plants and not top them at all. Or grow 2 plants, and "train" them to fill the same space. Most growers find) All plants have a vegetative stage where they are growing as fast as possible after the plant first germinates from seed. It is possible to grow plants with no dark period, and increase the speed at which they grow by 15-30&. Plants can be grown vegetatively indefinitely. It is up to the gardener to decide when to force the plant to flower. A plant can grow from 12" to 12' before being forced to flower, so there is a lot of latitude here for each gardener to manage the garden based on goals and space available. A solution of 20-20-20 with trace minerals is used for both hydroponic and soil gardening when growing continuously under lights. Miracle Grow Patio or RapidGrow plant food is good for this. A high P plant food such as Peter's 5-50-17 food is used for blooming and fruiting plants

when beginning 12 hour days. Epsom salts (1tsp) should be used in the solution for magnesium and sulfur minerals. Trace minerals are needed too, if your food does not include them. Miracle Grow Patio includes these trace elements, and is highly recommended. Keep lights on continuously for sprouts, since they require no darkness period like older plants. You will not need a timer unless you want to keep the lamps off during a certain time each day. Try to light the plants for 18 or more hours, or continuously at this point. Bend a young plant's stem back and forth to force it to be very thick and strong. Spindly stems can not support heavy flowering growth. An internal oscillating fan will reduce humidity on the leave's stomata and improve the stem strength as well. The importance of nternal air circulation can not be stressed enough. It will excersize the plants and make them grow stronger, while reducing many hazards that could ruin your crop. HYDROPONIC VEGATATIVE SOLUTION, per gallon: Miracle Grow Patio (contains trace elements) 1 teaspoon Epsom salts 1/2 teaspoon Human Urine (OPTIONAL - may create odors indoors.) 1/4 cup Oxygen Plus Plant Food (OPTIONAL) 1 teaspoon This mixture will insure your plants are getting all major and minor nutrients in solution, and will also be treating your plants with oxygen for good root growth, and potassium nitrate for good burning qualities. Another good GROWTH PHASE mix is 1/4 tsp Peter's 20/20/20 fertilizer per gallon of water, with trace elements and oxygen added, or fish emulsion. Fish emulsion is great in the grean-house or outdoors, where smells are not an issue, but is not recommended for indoors, due to its strong odor. FLOWERING The the plant will be induced to fruit or flower with dark cycles of 11-13 hours that simulate the oncoming winter in the fall as the days grow shorter. As a consequence, it works out well indoors to have two separate areas; one that is used for the initial vegetative state and one that is used for flowering and fruiting. There is no other requirement other than to keep the dark cycle for flowering very dark with no light interruptions, as this can stall flowering by days or weeks. Once a plant is big enough to mature (12" or over), dark periods are required for most plants to flower and bear fruit. This will require putting the lamp on a timer, to create regular and strict dark periods of uninterrupted light. In the greenhouse, the same effect can be created in the Summer (long days) by covering it with a blanket to make longer night periods. A strict schedule of covering the plants at 8pm and uncovering them at 8am for 2 weeks will start your plants to flowering. After the first 2 weeks, the schedule can be relaxed a little, but it will still be necessary to continue this routine for the plants to completely flower without reverting back to vegatative growth. Outdoors, Spring and Fall, the nights are sufficiently long to induce flowering at all times. Merely bring the plants from indoors to the outside at these times, and the plants will flower naturally. In late Summer, with Fall approaching, it may be necessary only to force flowering the first two weeks, then the rapidly lengthening nights will do the rest. Give flowering plants high P plant food and keep them on a strict light regimen of 12 hours, with no light, or no more than a full moon during the dark cycle. 13 hours light, 11 dark may increase flower size while still allowing the plant to go into the flowering mode. Use longer dark periods to speed maturity toward the end of the flowering cycle if speed is of the essence. (8-10 days) This will however,

reduce total yield. Two shelves can be used, one identical to the other, if strictly indoor gardening is desired. One shelf's lights are set for 12-13 hours, and one is lit continuously. Plants are started in continuous light, and are moved to the other shelf to flower to maturity after several weeks. This flowering shelf should be bigger than the "starting" or "vegetative" shelf, so that it can accommodate larger plants. Or, some plants can be taken outside if there is not enough space on the flowering shelf for all of them near harvesting. A light tight curtain can be made from black vinyl, or other opaque material, with a reflective material on the other side to reflect light back to the plants. This curtain can be tied with cord when rolled up to work on the garden, and can be velcroed down in place to make sure no light leaks in or out. If the shelf is placed up high, it will not be very noticeable, and will fit in any room. Visitors will never notice it unless you point it out to them, since it is above eye level, and no light is being emitted from it. Flowering plants like very high P level foods, such as 5-50-17, but 10-20-10 should be adequate. Nutrients should be provided with each watering when first flowering. Trace elements are necessary too; try to find foods that include these, so you don't have to use a separate trace element food too. Home improvement centers sell trace element solutions rich in iron for lawn deficiencies, and these can be adapted for use in cultivating the herb. Prices for these mass produced fertilizers are significantly cheaper than the specialized hydroponic fertilizers sold in indoor gardening shops, and seem to work just fine. HYDROPONIC FLOWERING SOLUTION, per gallon: 1 tspn high P plant food, such as 15-30-15, or 5-50-17, etc. 1/2 tspn epsom salts 1 tspn Oxygen Plus Plant Food (Optional) 1 tspn Trace Element food I cannot stress enough that during the FLOWERING PHASE, the dark period should not be violated by normal light. It delays flower development due to hormones in the plant that react to light. If you must work on the plants during this time, allow only as much light as a VERY pale moon can provide for less than 5 minutes. Keep pruning to a minimum during the entire FLOWERING PHASE. A green light can be used to work on the garden during the dark period with no negative reactions from the plants. These are sold as nursery safety lights, but any green bulb should be OK. It is best to keep the dark hours a time when you would normally not wish to visit the garden. Personally, I like my garden lit from 7pm to 7am, since it allows me to visit the garden at night after work and in the morning before work, and all day long, while I'm too busy to worry about it, it lies unlit and undisturbed, flowering away... Flowering plants should not be sprayed often as this will promote mold and rot. Keep humidity levels down indoors when flowering, as this is the most delicate time for the plants in this regard. Early flowering is noticed 1-2 weeks after turning back the lights to 12 hour days. Look for 2 white hairs emerging from a small bulbous area at every internode. This is the easiest way to verify females early on. You can not tell a male from a female by height, or bushiness. 3-6 weeks after turning back the lights, your plants will be covered with these white pistils emerging from every growtip on the plant. It will literally be covered with them. These are the mature flowers, as they continue to grow and cover the plant. Some plants will do this indefinately until the lights are turned back yet again. At the point you

feel your ready to see the existing flowers become ripe (you feel the plant has enought flowers), turn the lights back to 8-10 hours. Now the plant will start to ripen quickely, and should be ready to harvest in 2-3 weeks. The alternative, is to allow the plant to ripen with whatever natural day length is available outside, or keep the plants on a constant 12 hour regimen for the entire flowering process, which may increase yield, but takes longer. Plants can be flowered in the final stages outdoors, even if the days are too long for normal flowering to occur. Once the plant has almost reached peak floral development, it is too far gone to revert quickly to vegatative growth, and final flowering will occur regardless. This will free up precious indoor space sooner, for the next batch of clones to be flowered. Look for the white hairs to turn red, orange or brown, and the false seed pods (you did pull the males, right?) to swell with resins. When most of the pistils have turned color (~80%), the flowers are ripe to harvest. Don't touch those buds! Touch only the large fan leaves if you want to inspect the buds, as the THC will come off on your fingers and reduce the overall yield if mishandled. HYDROPONICS Most growers report that a hydroponic system will grow plants faster than a soil medium, given the same genetics and environmental conditions. This may be due to closer attention and more control of nutrients, and more access to oxygen. The plants can breath easier, and therefor, take less time to grow. One report has it that plants started in soil matured after hydroponic plants started 2 weeks later! Fast growth allows for earlier maturation and shorter total growing time per crop. Also, with soil mixtures, plant growth tends to slow when the plants become root-bound. Hydroponics provides even, rapid growth with no pauses for transplant shock and eliminates the labor/materials of repotting if rockwool is used. (Highly recommended!) By far the easiest hydroponic systems to use are the wick and reservoir systems. These are referred to as Passive Hydroponic methods, because they require no water distribution system on an active scale (pump, drain, flow meter and path). The basis of these systems is that water will wick to where you want it if the medium and conditions are correct. The wick system is more involved than the reservoir system, since the wicks must be cut and placed in the pots, correct holes must be cut in the pots, and a spacer must be created to place the plants up above the water reservoir below. This can be as simple as two buckets, one fit inside the other, or a kiddie pool with bricks in it that the pots rest on, elevating them out of the nutrient solution. I find the wick setup to be more work than the reservoir system. Initial setup is a pain with wicks, and the plants sit higher in the room, taking up precious vertical space. The base the pot sits on may not be very stable compared to a reservoir system, and a knocked over plant will never be the same as an untouched plant, due to stress and shock in recovery. The reservoir system needs only a good medium suited to the task, and a pan to sit a pot in. If rockwool slabs are used, a half slab of 12" rockwool fits perfectly into a kitty litter pan.
The roots spread out in very desirable horizontal fashion and have a lot of room to grow. Plants grown in this manner are very robust because they get a great deal of oxygen at the roots. Plants grown with reservoir hydroponics grow at about the same rate as wicks or other active hydroponic methods, with much less effort required, since it is by far the simplest of

hydroponic methods. Plants can be watered and feed by merely pouring solution into the reservoir every few days. The pans take up very little vertical space and are easy to handle and move around. In a traditional hydroponic method, pots are filled with lava/ vermiculite mix of 4 to 1. Dolite Lime is added, one Tblspn. per gallon of growing medium. This medium will wick and store water, but has excellent drainage and air storage capacity as well. It is however, not very resuable, as it is difficult to recapture and sterilize after harvest. Use small size lava, 3/8" pea size, and rinse the dust off it, over and over, until most of it is gone. Wet the vermiculite (dangerous dry, wear a mask) and mix into pots. Square pots hold more than round. Vermiculite will settle to bottom after repeated watering from the top, so only water from the top occasionally to leach any mineral deposits, and put more vermiculite on the top than the bottom. Punch holes in the bottom of the pots, and add water to the pan. It will be wicked up to the roots and the plants will have all they need to flourish. The reservoir is filled with 1 1/2 - 3 inches of water and allowed to recede between waterings. When possible, use less solution and water more often, to pull more oxygen to the roots faster over time. If you go away on vacation, simply fill the reservoirs full to the top, and the plants will be watered for 2 weeks at least. One really great hydroponic medium is Oasis floral foam. Stick lots of holes into it to open it up a little, and start plants/clones in it, moving the cube of foam to rockwool later for larger growth stages. Many prefer floral foam, as it is inert, and adds no PH factors. It's expensive though, and tends to crumble easily. I'm also not sure it's very reusable, but it seems to be a popular item at the indoor gardening centers. Planting can be made easier with hydroponic mediums that require little setup such as rockwool. Rockwool cubes can be reused several times, and are premade to use for hydroponics. Some advantages of rockwool are that it is impossible to over water and there is no transplanting. Just place the plant's cube on top of a larger rockwool cube and enjoy your extra leisure time. Some find it best to save money by not buying rockwool and spending time planting in soil or hydroponic mediums such as vermiculite/lava mix. Pearlite is nice, since it is so light. Pearlite can be used instead of or in addition to lava, which must be rinsed and is much heavier. But rockwool has many advantages that are not appreciated until you spend hours repotting; take a second look. It is not very expensive, and it is reusable. It's more stable than floral foam, which crunches and powders easily. Rockwool holds 10 times more water than soil, yet is impossible to over-water, because it always retains a high percentage of air. Best of all, there is no transplanting; just place a starter cube into a rockwool grow cube, and when the plant gets very large, place that cube on a rockwool slab. Since rockwool is easily reused over and over, the cost is divided by 3 or 4 crops, and ends up costing no more than vermiculite and lava, which is much more difficult to reclaim, sterilize and reuse (repot) when compared to rockwool. Vermiculite is also very dangerous when dry, and ends up getting in the carpet and into the air when you touch it (even wet), since it drys on the fingers and becomes airborne. For this reason, I do not recommend vermiculite indoors. Rockwool's disadvantages are relatively few. It is alkaline PH, so you must use something in the nutrient solution to

make it acidic (5.5) so that it brings the rockwool down from 7.7, to 6.5 (vinagar works great.) And it is irritating to the skin when dry, but is not a problem when wet. To pre-treat rockwool for planting, soak it in a solution of fish emulsion, trace mineral solution and phosphoresic acid (PH Down) for 24 hours, then rinse. This will decrease the need for PH worries later on, as it buffers the rockwool PH to be fairly neutural. Hydroponics should be used indoors or in greenhouses to speed the growth of plants, so you have more bud in less time. Hydroponics allows you to water the plants daily, and this will speed growth. The main difference between hydroponics and soil growing is that the hydroponic soil or "medium"is made to hold moisture, but drain well, so that there are no over-watering problems associated with continuous watering. Also, hydroponically grown plants do not derive nutrients from soil, but from the solution used to water the plants. Hydroponics reduces worries about mineral buildup in soil, and lack of oxygen to suffocating roots, so leaching is usually not necessary with hydroponics. Hydroponics allows you to use smaller containers for the same given size plant, when compared to growing in soil. A 3/4 gallon pot can easily take a small hydroponically grown plant to maturity. This would be difficult to do in soil, since nutrients are soon used up and roots become cut-off from oxygen as they become root-bound in soil. This problem does not seem to occure nearly as quickly for hydroponic plants, since the roots can still take up nutrients from the constant solution feedings, and the medium passes on oxygen much more redily when the roots become bound in the small container. Plant food is administered with most waterings, and allows the gardener to strictly control what nutrients are available to the plants at the different stages of plant growth. Watering can be automated to some degree with simple and cheap drip system apparatus, so take advantage of this when possible. Hydroponics will hasten growing time, so it takes less time to harvest after planting. It makes sense to use simple passive hydroponic techniques when possible. Hydroponics may not be desirable if your growing outdoors, unless you have a greenhouse. CAUTION: it is necessary keep close watch of plants to be sure they are never allowed to dry too much when growing hydroponically, or roots will be damaged. If you will not be able to tend to the garden every day, be sure the pans are filled enough to last until next time you return, or you can easily lose your crop. More traditional hydroponic methods (active) are not discussed here. I don't see any point in making it more diffucult than it needs to be. It is necessary to change the solution every month if your circulating it with a pump, but the reservoir system does away with this problem. Just rinse the medium once a month or so to prevent salts build up by watering from the top of the pot or rockwool cube with pure water. Change plant foods often to avoid deficiencies in the plants. I recommend using 2 different plant foods for each phase of growth, or 4 foods total, to lessen chances of any type of deficiency. Change the solution more often if you notice the PH is going down quickly (too acid). Due to cationic exchange, solution will tend to get too acid over time, and this will cause nutrients to become unavailable to the plants. Check PH of the medium every time you water to be sure no PH issues are occuring. Algae will tend to grow on the medium with higher humidities in hydroponics. It will turn a slab of rockwool dark

green. To prevent this, use the plastic cover the rockwool came in to cover rockwool slab tops, with holes cut for the plants to stick out of it. It's easy to cut a packaged slab of rockwool into two pieces, then cut the end of the plastic off each piece. You now have two pieces of slab, each covered with plastic except on the very ends. Now cut 2 or 3 4" square holes in the top to place cubes on it, and place each piece in a clean litter pan. Now your ready to treat the rockwool as described above in anticipation of planting. If growing in pots, a layer of gravel at the top of a pot may help reduce algae growth, since it will dry very quickly. Algae is merely messy and unsightly; it will not actually cause any complications with the plants. RECYCLING Use pots made from squarish containers such as plastic water jugs, etc. More plants will fit in less space and have more rooting area if square containers are used. This makes your garden a recycling center, and saves you tons of money. 2-liter soda bottles work great, but are not square. 13 will fit in a kitty litter box, and these will take a 3 foot plant to maturity hydroponically. If you can get 4 litter boxes in a closet, you can grow 52 plants like this vegatatively. Spread them out more for flowering. Old buckets, plastic 3-5 gallon containers (food and paint industries, try painters' and resturant dumpsters), paper paint buckets, old plastic garbage cans of all sizes, and garbage bags have all been used successfully by growers. Do not use paper milk cartons and juice cartons for reservoir hydroponics, since these are difficult to sterilize, and they introduce fungus into your reservoir trays. Inert materials, such as plastic is best. Be sure to sterilize all containers before each planting with a clorine bleach solution of 2 tbspn. of bleach to one gallon of water. Let container and meduim such as rockwool soak for several hours in the solution before rinsing thouroghly. PLANTING OUTDOORS Outdoor growing is the best. Outdoor pot by far is the strongest, since it gets more light, it's naturally more robust. No light leak problems. No dark periods that keep you out of your grow room. No electricity bills. Sunlight tends to reach more of the plant, if your growing in the direct sun. Unlike growing indoors, the bottom of the plant will be almost as developed as the top. Outdoors, outside of a greenhouse, there are many factors that can kill your crop. Deer will try to eat them. Chipmonks and rodents too. Bugs will inhabit them, and the wind and rain can whip your little buds to pieces if they are exposed to strong storms. For this reason, indoor pot can be better than outdoor, but the best smoke I ever tasted was outdoor pot, so that tells you something; nothing beats the sun. Put up a fence and make sure it stays up. Visit your plot at least once every two weeks, and preferably more often if water needs demand. It's a good idea to use soil if you don't have a green house, since hydroponics will be less reliable outside in the open air, due mostly to evaporation. Light exposure is all important when locating a site for a greenhouse or outdoor plot. A backyard grower will need to know where the sun shines for the longest period; privacy and other factors will enter in as well. Try to find an innocuous spot that gets full winter sun from mid morning to mid afternoon, at least from 10-4, preferably 8-5. This will be really asking for a lot if you live north of 30 degrees latitude since days are short in winter. Since most gardeners will not want to use the greenhouse in the middle of the winter, you can still use winter sun as an

indicator of good spring and fall lighting exposures. Usually the south side of a hill gets the most sun. Also, large areas open to the sun on the north side of the property will get good southern exposures. East and West exposures can be good if they get the full morning/afternoon sun and mid-day sun as well. Some books say the plants respond better to morning-only sun, verses afternoon-only sun, so if you have to choose between the two, morning sun may be better. Disguise your greenhouse as a tool shed, or similar structure, by using only one wall and a roof of white opaqued plastic, PVC, Filon, or glass, and using a similar colored material for the rest of the shed, or painting it white or silvery, to look like metal. Try to make it appear as if it has always been there, with plants and trees that grow around it and mask it from view while allowing sun to reach it. Filon (corrugated fiberglass)or PVC plastic sheets can be used outside to cover young plants grown together in a garden. Buy the clear greenhouse sheets, and opaque them with white wash (made from lime) or epoxy resin tinted white or grey and painted on in a thin layer. This will pass more sun than white PVC or Filon, and still hide the plants. Epoxy resin coats will preserve the Filon for many more seasons than it would otherwise last. It will also allow you to disguise the shed as metal, if you paint the clear filon sheets with a thin layer of resin tinted light grey. Paint will work as well, but may not protect as much. Be careful to use only as much as needed, to reduce sun blockage to a minimum. Dig a big hole, don't depend on the plant to be able to penetrate the clay and rubble unless your sure of the quality of topsoil in the area. Grassy fields would have good top soil, but your back yard may not. This alone can make the difference between an average 5' tall plant, and a 10' monster by harvest time. Growing in the ground will always beat a pot, since the plant will never become root bound in the ground. Plants grown in the ground should grow much larger, but will need more space for each plant, so plan accordingly, you can't move them once they're in! You may want to keep outdoor plants in pots so they can be easily moved. A big hole will allow the pot to be place in it, thus reducing the height of the plant, if fence level is an issue. Many growers find pots have saved a crop that had to be moved for some unexpected reason (repairman, appraiser, fire, etc.). It's always best to put a roof over your plants outdoors. When I was a lad, we had plants growing over the fence line in the back yard. We started to build a greenhouse roof for them, and a cop saw us hauling wood, thought we were stealing it (which we were not) and looked over the fence at us and our lovely plants. We were busted, because he saw them. If he had seen a shed roof instead, there would never have been a problem. Moral of the Story: build the roof BEFORE the plants are sticking over the fence! Or train them to stay well below it. Live and learn... When growing away from the house, in the wild, water is the biggest determining factor, after security. Water must be close by, or close to the soil surface, or you will have to pack water in. Water is heavy and this is very hard work. Try to find an area close to a source of water if possible, and keep a bucket nearby to carry water to your plot. A novel idea in this regard is to find high water in the mountains, at altitude, and then route it down to a lower spot close by. It is possible to create water presure in a hose this way, and route it to a drip system that feeds water to your plants continuously.

Take a 5 gallon gas can, and punch small holes in it. Run a hose out of the main orifice and secure it somehow. Bury the can in a river or stream under rocks, so that it is hidden and submerged. Bury the hose coming out of it, and run it down hill to your garden area. A little engineering can save you a lot of work, and this rig can be used year after year. GUERRILLA FARMING Guerrilla farming refers to farming away from your own property, or in a remote location of your property where people seldom roam around. It is possible to find locations that for one reason or another are not easily accessible or are privately owned. Try to grow off your property, on adjacent property, so that if your plot is found, it will not be traceable back to you. If it's not on your property, nobody has witnessed you there, and there is no physical evidence of your presence (footprints, fingerprints, trails, hair, etc.), then it is virtually impossible to prosecute you for it, even if the cops think they know who it belongs to. Never admit to growing, to anyone. Your best defence is that your just passing thru the area, and noticed something you decided to take a look at, or carry a fishing pole or binoculars and claim fishing or bird watching. Never tell anyone but a partner where the plants are located. Do not bring visitors to see them, unless it is harvest time, and the plants will be pulled the same or following day. Make sure your plants are out of sight. Take a different route to get to them if they are not in a secure part of your property, and cover the trail to make it look as if there is no trail. Make cut backs in the trail, so that people on the main trail will tend to miss the cut-back to the grow area. Don't park on the main road, always find a place to park that will not arouse suspicion by people that pass on the road. Have a safe house in the area if you are not planting close to home. Always have a good reason for being in the area and have the necessary items to make your claim believable. Briar and poison oak patches are perfect if you can cut through it. Poison Oak must be washed away before an allergic reaction takes place. Teknu is a special soap solution that will deactivate poison oak before it has time to create a reaction. Apply Teknu immediately after contact and take a shower 30 mins. later. Try to plant under trees, next to bushes and keep only a few plants in any one spot. Train or top the plants to grow sideways, or do something to prevent the classic christmas tree look of most plants left to grow untrained. Tying the top down to the ground will make the plants branches grow up toward the sun, and increase yield, given a long enough growing season. Plants can be grown under trees if the sun comes in at an angle and lights the area for several hours every day. Plants should get at least 5 hours of direct sun every day, and 5 more hours of indirect light. Use shoes that you can dispose of later and cover your foot prints. Use surgical gloves and leave no fingerprints on pots and other items that might ID you to the fuzz...in case your plot is discovered by passers by. Put up a fence, or the chipmonks, squirles and deer will nibble on your babies until there is nothing left. Green wire mesh and nylon chicken fencing net work great and can be wrapped around trees to create a strong barrier. Alw

Doug you're repeating yourself or you
left the echo box on. Something that
you and your friends will never say.......
YES I DID those post, and yes I did. But
instead of trying to worm out of those
things I'll admit it, well over a year and a half
ago, but I posted that. Now will you and the
others admit to posting "illegal" items for
sale?

The Landshark

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream

1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

What's wrong with flooding? Flooders are tired of being called criminals.
Flooding is breaking a trivial rule. ISP's don't even enforce it unless
some busybody complains. It's like littering or spitting on the sidewalk.
Flooders choose to break the rules and they have the right to not be criticized
for it. Plus this NG is "international" in nature so different IP rules apply.
Some IP's may permit flooding. There will always be flooders and there is
nothing you can do about it, so stop whining and get a life.

Go here
http://www.exportradios.com/cgi-bin/SoftCart.exe/index.html?E+scstore
At this site you will find not only a superior board then this one but
you can also find all those hard to get items that the keyclown gang
doesn't want you to have.
Just think 100's of items (Imports-Amps-etc) plus a board to go to to
get all the info on how to hook up your 10kw kicker to almost
anything!!!!!
Let the flames begin!!!!! But just remember I wont be here to read them
cause I will be at EEI.
L8ter Sk8ter,
John

P.S.= Happy Freebanding!!!

For anyone that didn't want to read the entire post, here are a few of
the highlights:

Landshark speaks:
=====
> I personally don't
>give a SHIT about you or most other Cb'ers.
=====
>Go fuck yourself, you live
>with what's been created, whether you like it or not, but stop
>being such a hypocrite and whiner.
=====
>Nice bait ....Go fuck yourself
>and quit taking up bandwidth, now die ....
=====
>P.S. you're still a fucking dick, please die now.........
=====
>If a radio is type accepted
>for cb, than it can not be altered, then used
>by a ham, or anyone, on any freq. you're An idiot.
>READ THE RULES AGAIN!!!!!!! Oh
>by the way......... Go fuck yourself....

And now for a more recent quote:

> Hello & Good Evening,
>While I must say that you do have a liberal policy for the
>Usenet, I must lodge a complaint against this individual.
>Not only is his header offensive in language, but
>is on the verge of being slanderous against me. I
>do not know this person, nor do I care for his
>accusations concerning my sexuality.
> Please research this person, he has had several
>different ISP's, all have taken away his right to
>post because of this type of language and activity.
>
> Thank you very much for your support.

And my personal favorite:

> So all I'm saying Frank,.....................
>Don't spew that crap, when you are just as guilty.
>
> The Landshark

2820. Re: grey mic keys

Newsgroup: rec.radio.cb

From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <lajpgto6dv47bmguleeoj1c2gbun971k4g@4ax.com>
Source record: 83170

Greetings!

[You had to ask, it's a long one and read it over then decide...]

The "Grey Key" mikes use a Condenser element. They need a small [low current and potential] power source to make them work. They changed to this scheme to denote and make it easier for those in the know to either avoid, or remember that the mic only works with that radio - nothing else except other Grey key types.

It also simplifies things for the CB maker, the elements have a high enough output to offset the need to use a separate mic amp section inside the radio.

The audio and ground lines in the mic cord is what makes the element work.

A DC blocking cap is used inside the radio, but on the mic element side, the power source is of a high impedance and has a trickle voltage and charge current to it.

The audio on the line, is a varying waveform, so the blocking cap allows it to pass thru, but keeps the DC side of things out - and is why it's called a high impedance. It's so the DC "sees" a high impedance, but the audio can pass thru relatively un-impeded.

But there is a catch. There can only be a small trickle of power available to make the FET work. The FET itself has a high impedance output - from a few mega-ohms to a low as 500 ohms across the DC line. So the output of the mic, or the audio - appears as a downward going change from DC+ to nearly 0 volts. If the voltage recovers too quickly, no audio can pass
thru the line due to the FET can't work the power source as a varying impedance.

This small voltage works an FET-based amp in the condenser element. The audio line carries both the audio and DC, but due to the blocking cap, only audio "appears" on the other side - it's filtered and goes thru the limiter and onto the audio chip - no other amplification to this signal is done or needed.

It's a high output [line level] similar to a "ceramic" cartridge that can directly drive a Stereo receivers Tape monitor input.

You can increase the voltage output and current draw, but
you'll possibly wind up with a dead element. They only use
3V and "see" an impedance of 3K to 5K ohms at the DC level.

Too much voltage and the FET can self-destruct. You can go
as high as 5 volts, but you lose audio quality if you go too
far.

When you try to hook up a power mic to the radio, using the same
pinouts, the mic's own blocking cap/tonal output filter is charged by
this power source from the radio. The audio output from the mic and
the radios power source fight each other and audio loses.

However, if you're adept at a soldering iron, you can remove the power
from the audio line internally on the radio - and run a power mic.
You'll need to anyways. The condenser element produces as much audio
power output as a typical power mike - some "grey key" mic elements
even produce more dB/W/m than an Astatic or Road Devil power mic.

You just need to locate the voltage "feed" that goes to the audio line
that goes to the mic jack on the radio. Locate the wire on the jack,
and work back. Once you find the spot on the board, follow the foil
trace [bottom/foil side] to the blocking DC cap that goes to the
limiter and another trace should go to a series of resistors and caps
designed to filter out engine and hash noises from interfering with
the audio.

The first resistor you find should be the one you need to disconnect.
However, there is two resistors used as a voltage divider, one
resistor is connected across [Ground and power], while the other is in
series with the power from the switch. If you're not sure, disconnect
both. If you wind up with a squeal, you have too much audio and
re-check the resistors. Re-solder the one that has a lead going to
foil ground - this one needs to be there to help reduce RF feedback
and offer a return and impedance to audio present inside the radio.

I gave you the above, because the Cobra 19 series has so many
different revisions and changes done to the chassis over the years,
it's hard to tell you which resistor number to disconnect.

Besides, the 510 from Uniden, has two different models, one is the XL
suffix, and uses a Dynamic mic, while the 510e uses a condenser - but
the jacks are different. Dynamic uses the typical 4-pin, while the "e"
uses a RJ-12 Modular phone jack and plug instead. Makes it easier to
know which one uses what - versus the Cobra which can use 4-pin or
5-pin - depending on the year, and suffix.

On Wed, 23 May 2001 21:09:26 -0400, while the modem was busy tying up
IRQ's with the Mouse, "mesief" <ondanees@hotmail.com> dissertated the
following:

:+> is it true that the new radios with grey mic keys will not accept a power
:+> mic. i have a cobra power mic from an old radio and was going to buy a
:+> cobra 19 for my pick up but noticed the mic on the new radio had a colored

:+> ptt button. what does that mean. i thought someone told me in the past
:+> these radios would not take a power mic. any thought or facts.
:+>

Regards!
:+> Andy <+:

Aw, shark, too bad. You do realize just how many homophobes and
rednecks there are in this ng, don't you? Do you think you will ever
get any peace anymore? Sorry to see you go...

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!

BTW, does your wife and little girl know about your interests in
transvestites and transsexuals? I really feel sorry for your kid.
Honestly. But you must have known this would happen some day.

What is a real Nick? I can be anyone I want to

"Ahaha! Any second you are going to start to whine, "Nyah nyah nyah nyah nyah nyah you can't do nuthin' nyuhnyuh, ahahah."

be just like on the radio. Why do I need to hide from you.

"Good question. Be yourself and prove it."

The regular "regulars know exactly who I am.

"And that is supposed to mean something to me? Damn, son, you are lacking severely."

You can call me chickenhawk or whatever you want to twitsie.

"Won't call you a thing unless I'm giving it back."

I have changed screen names on here like the weather.

"If you are going to analogize, get it right. You change names like your male nurse changes your attends."

Which I can do daily if I like and if it upsets you
"Nothing here upsets me."

waaaawaaa.

"Yes, I have that effect on cowards."

. go cry to someone who gives a fuck. I know they don't call you son because your not that bright.

"No one calls me that except anonyous cowards who talk trash..hahaha."

"Wow. You have some IQ there. Acceptance isn't even in my vocabulary. I care what no one thinks. It has always been you c'hawks talking about what is best for the group, an alleged concern for everyone, attempting to make your own group, even pleading for members. Once again, for you double digit IQ holders,
---

Twistie you seem to think anyone who opposes you

"Uh, opposes me as WHAT? The only thing I have professed here lately is Adair's trash, and now yours. What is to "oppose". Go back to breathing the fumes."

is aligned with Doug or talks to him or whatever,

"Again, you were the one who stuck your beak in and allded to an interlude of some type with Adair."

I could care less about the Ng I am out here for the fun of it breaking your balls

"You are out here because you and Adair share the same views and probems with yourselves."

amongst others is pure enjoyment for me.

"You really need a life. Glad I can bring a smile to your mundane world."

I don't need to go to any new group they have the yahoo cb group if i wanted

"Who said anything about you going anywhere? I want you here where I can continue to make a fool out of you and your "cough cough" RF theory. Now if you are so cool, why are you afraid to let me know your regular name? Yes, junior, you are afraid."

I would go there I don't my fun is whatching you get your Nutz

(sigh) Yes, you and Adair DEFINITELY were involved. We would have figured that out whether you came rushing to his defense like his prince in shining armor or not."

squeezed daily.

You have made plenty of false accusations that about it, open your mouth I am gonna spoof in it again. Any time you want to talk rf fliptwig, I see you avoid that subject like the plague.

"Again, I refer you to below. You know nothing of radio."

"If you truly want to debate RF theory, show yourself so I can make the entire world laugh as I slam dunk your "knowledge." Otherwise, you have nothing to say or prove, except that I already hammered your BS once, which is why you are in hiding. Come back when you grow a full set. I don't argue with frightened children in halloween costumes."

Twistedhed, you pathetic

"My word for you. Plagiarism, worship, and dressing in drag and talking on a cb won't make you me. Try again, Adair."

, delusional, Jack Daniels

"I don't drink."

-guzzling dock bum.
You obviously DON'T GET IT.

"No, you don't get it. I have you so freaked out that I now consume al your time..heheeh. You go to sleep thinking about me, I consume all your unproductive time, and when you wake your pudgy little carcass, I am the first thing on your mind. So tell us all how, "I obviously don't get it", ahhehehehehh!"

So let's break this down Big Bird style

"Whatever floats your beak."

for you.

1. You are a homosexual.

"Adair's mantra.....
"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity.."

(HEY! NONE OF YOUR BACKTALK NOW. IT'S TRUE AND YOU KNOW IT IS! IF YOU WANT US TO GIVE AWAY WHAT HAPPENED THAT TIME IN SAN FRANSCISCO THEN JUST KEEP UP YOUR GUFF, FAGBOY)

Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is,

resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity..

As a fag,

Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity..

you must expect and *tolerate* ridicule, especially if you CHOOSE to hang out in a newsgroup populated by rough, tough, he-men outlaw CBers and their detractors. So unless you move to alt.homosexual,

Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity..

you are going to get pushed around here.

"Maybe, but not by homo posting cowards like you."

You may as well accept it and be at peace with it.

"I am totally at peace with myself. I have no inner turmoil stemming from my childhood years such as you are familiar with. Nothing as dramatic as the chickenhawk incident you endured that made you what you are today. Scared of cbers."

2. We DO NOT CARE WHAT YOU POST..

"Sure you do. I am your world."

or say...or do. We will be here

"HAHAH! Saying "we" is certainly correct in your application. WE now understand. Your frame equals two, maybe three, so you may continue referring to your ever dieting hawk self as "we". :) I hope so. The world has been roaring at the funny guy that has been getting slapped by a redneck, especially when the redneck leaves for awhile and tells the dogie to slap himself until the redneck comes back, and the property merrily obliges."

ANYWAY....laughing at you and your wildly hilarious attempts at the English language. Sometimes we

"Well, when you and your dieting self come to therapy, is this discussed? How many "selfs" do you think your weight equals? Let's see...I have counted 13 names you used this month alone, but come on,

Adair. You need to get some self worth. You are fat, but no where near 13 men worth. Really, maybe two or three "we's" will be sufficient."

will reply to your pathetic bleatings, other times, not.

"Stop lying. You will because I said so."

3. Doug is not here.

"What, he is in the shadow of beer belly cber number 7 that resides in you? Remember, there are 13 of you."

If you paid attention at all, you could tell the difference when he shows up.

"Shows up? Adair, you poor intellectually challenged tub, you never left."

Others can. You - Mr. DimBulb - can't.

4. You are obsessed (in a homosexual way)

Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity..

with Doug Adair. We suggest you write to him at n8wwm@arrl.net and pour out your lovesick longings. He may have time to write back and tell you to go to hell or give you instructions on how to slash your wrists.

"I am quite certain Adair, you are well versed in this act. It goes hand in hand with your personality. Chances are you are left handed as well, and the scars remain on your right wrist. I will even venture a guess as to your last attempt was in the last 3 or 4 years."
"
Imagine: you can stroke your little weenie

Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity..

while you read his reply.

5. No matter what you do or say or think, or how many illegal thugs try and stop us, WE WILL STILL BE HERE.

"As I said, all 13 of your tubby personalities are invited to remain for more embarassment, by myself or other cbers, be they legal or not."

Illegal CBers SUCK and WE ANTIKEYCLOWNS ARE -NEVER- GONNA LET YOU FORGET IT.

"We won't forget to toss you a crumb every once in a while. Your frame cannot live on crow alone."

THE BEAT GOES ON!

"That's the sound of you walking."

Pilots know where to buy airband handhelds.

> He would like to
>know if he can also get cb and marine in the same package.

No. Not available. And probably for good reason.

>I see nothing wrong with this.

Why run down the batteries chatting on CB and then find he needs the airband? Plus, the wide range of frequencies would compromise performance on ALL bands. And what does the Marine band have to do with this. Does friend also own a boat? If so, boaters know where to get marine handhelds (which operate on FM, by the way).

>I can see how someone could get in trouble with such a
>rig, but don't assume that I am someone looking for "extra" frequencies.
>

Sorry, Nathan. That IS my assumption, and nothing you said has changed it. If the group is wrong, fine! We don't want to see anyone get into trouble with the Feds.

New Subject: The Board of Trustees of UIUC was to meet yesterday to approve Nancy Cantor as Chancellor. Do you know if that occurred?

Best regards,

Yeah, I saw it. However the kids don't have any morals about shooting you, and they do get practice from all the "drive-bys" we hear about on the news at night. Oh yeah, one more thing, be very careful what you do with your hands. Some idiot made what appeared to be a gang symbol, purely by accident, of a rival gang and got shot for his trouble. Of course just because you're carrying doesn't do you any good when the home towner gets his out FIRST. Heck, even the girl that drives the noon lunch truck packs too, and I work out in the burb's! A lady friend of mine is applying for a CCW, and my sister has a semiautomatic handgun, a rifle, and a shot gun at her house, also in the suburbs. I think more females pack around this town then men!

> ----------I would rather

You don't know just HOW BAD it really is!

> ----------Sorry Peland I
didnt
> use the scare tactics you did but I offered the man some sound advice

Yeah, like you should have told him it's not a good idea to come here in the first place. Instead you tell him to carry a "piece", which without a CCW permit, will land him in the local lock up. The police department is currently being investigated because various people have died while in jail from lack of medical help. They are also currently under investigation for arresting witnesses to crimes, and holding them in jail until they talk too. I also know a County Cop, who is also a local Ham, and he told me they have direct orders to "shoot-to-kill" when they feel their life is at stake. Well one day a cop shot and killed a guy coming at him with a lawn rake. The cop is still on the job. Like I said welcome to Detroit. Scare tactics, naw, it's just the way things are in the city.

Hi again Twistedhed, (You've no idea how strange it feels to address
someone like that:-))

Don't sweat it, no ill will taken...I completely understand. At first
I thought it might be a Yahoo thing since Alan and Katekebo both use
Yahoo e-mail accounts. However, that would only account for two so I
think it would more likely be a Google thing since that appears to be
the common thread. (No pun intended.) I don't know Katekebo but I do
know Alan. In fact, I lent Alan my Gordon West CW cassettes as he
lives one state over from me. If you've ever taken a look at my posts,
you'll see that I certainly wear no halo re. my 11 meter past.

This brings me to another question. You seem to be fairly
knowledgeable re. NG's. When I went home last night, I was unable to
find this thread with my CompuServe Newsgroups feature. I tried doing
a List All on rec.radio.cb rather than only unread to no avail. I
thought that a bit odd. The other thing is that that muliple posts
(You know who.) show up on my CompuServe NG, very annoying to say the
least. Is there any way I can "filter" that out? Sorry, if I'm asking
somewhat over-simplistic (read dopey) questions but I'm not very NG
savvy. Thanks for the help.

Body handling: HTML body converted to readable text

Hi Doug,
Now you really don't beleive this, right?
Because by your own post you were going
to sell an illegal radio, and that's against the
rules. Since when does "international in nature"
anything to do with a "private companys TOS"?
Doug, give yourself better judgement, a private
company set it's own rules. Please don't spout
off "they have to follow laws", you know excatly
what I mean.
As far as flooding, well there is nothing that I can
do alone, but when nomerous people complain, you
can have your ISP yanked, case in point:

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

Dear Mr. XXXX,

I am answering your email on behalf of Steve Case. Thank you for taking the time to write to us.

We share your concern in this matter.

The quality of our members' online experience is a top priority at AOL, and we know that junk e-mail -- also known as "spam" -- is a frustrating problem. Whether it comes from the Internet or from another AOL member, junk e-mail is an inconvenience and is strictly against AOL's Terms of Service (TOS), which prohibit junk e-mail of any kind (see AOL's Unsolicited Bulk E-mail Policy at Keyword TOS).

Please be assured that AOL does not provide your e-mail address to any junk e-mailer. These names are collected through a variety of methods including capturing screen names in chat rooms, on bulletin boards, from the Usenet, and through random searches of our Member Directory.

AOL Technologies has made tremendous strides in battling junk e-mail. Today, AOL delivers more than 80 million pieces of e-mail each day to AOL members and our anti-spam technologies enable us to block millions of pieces of junk e-mail before it enters our network or our members e-mail inboxes.

We've also put technological tools directly into the hands of our members. To learn more about how you can help stop spam from getting into your mailbox go to Mail Controls (Keyword: Mail Controls). Mail Controls allow members to choose from what sources they want to receive e-mail and to block unwanted e-mail from specific Internet address domains or AOL screen names. The Mail Controls function allows members to make their e-mail choices quickly and conveniently.

To help us identify junk e-mailers, we ask members to forward any junk e-mail they receive to the "TOSSpam" mailbox. We know that sometimes it is easier to simply delete a piece of mail, but it is important for members to forward this spam to us so we can track the source.

To keep our members informed about what we are doing on this issue, we provide an area called Junk Mail (keyword: JUNK MAIL). Members can learn not only what AOL is doing to stop junk mailers, but also how they can join the fight.

As part of our anti-spam efforts, AOL recently launched a new area to provide members with tips for keeping yourself off of spammers e-mailing lists (see Stop Unwanted E-mails Keyword Junk Mail). We are also continuing to pursue a multi-pronged attack against spam that includes aggressive legal actions against junk e-mailers, continued technological research and development of spam filters as well as an ongoing member awareness program.

On the legal front, AOL has filed suit against more than forty different companies or spammers who have been sending bulk e-mail to AOL members. The Company has successfully obtained Court orders barring many of these companies from bulk e-mailing. In December 1998, we initiated a new round of legal action against junk e-mailers. AOL filed nine new lawsuits against spammers across the country and won three more cases (see Court Rulings Give AOL Three New Victories In the Battle Against Junk E-Mail in Keyword Press). These cases are working their way through the judicial system and some have already resulted in judgements against junk e-mailers. We are continuing to search out the sources of junk e-mail and we will continue to bring legal action against junk e-mailers.

We are pleased with the significant progress that we have made to date, but we also recognize that there is more to be done. We are determined to continue our efforts to fight junk e-mail in the courts.

Again, thank you for your e-mail. We will continue to report to you online as we keep making progress against spam. Please let us know if we can provide you with further information.

Sincerely,
Amanda
Office of the Chairman

Hello & Good Evening,
I am writing this in hopes that you will understand.
While free speech is a right of the people, "flooding"
is positively not. This person, in the past 4 months
has been flooding this and other newsgroups
Per your very own TOS, he is barred from doing this,
and yet you let something like this happen.
I again implore that you have this person cease &
desist these types of post, or bar him from the very newsgroups that
he is affecting.

Thank you for your help in this matter,

XXXX X XXXX

We always get a good laugh when illegals try and "zero in" on critics
of illegal
CB.

They cannot fathom that there might be more than one person in the NG
that
thinks illegal CB is stupid and pirate ops are criminals.

In the dim rescesses of the KeyClown mind, there is only ONE thorn in
their
side, and once he is gotten rid of, there will be joy in Mudville.
(Sorry
for the reference to classic poetry. Let's put it in terms you can
understand)
They think if they can just "get rid of" Doug....or "expose"
Leland...or
drive away Sparky, then the NG will be back to "normal", i.e., a haven
for
outlaw CB.

Wrong.

AntiKeyClowns are a multi-celled (Yes Dave, we are talking Cold War
Commies!
AYIII!) organization. Cut off the head and the body still functions.

So go for it, Landshark. Write to ISPs and demand the criticism of
illegal
CB stop. Write, write, write, till your little fingers hurt. We will
be
here....laughing!

You need to find out if others are using CB in your marine environment. If not, then you should stick with a VHF marine radio which will be monitored by the coast guard. And maybe bring your cell phone?

Wow Great response did it take you all day to think of that stupid reply?

> "Good question. Be yourself and prove it."

I am myself, what do I need to prove to you? I don't need your approval or
acceptance who the hell are you

>
> The regular "regulars know exactly who I am.
>
> "And that is supposed to mean something to me? Damn, son, you are
> lacking severely."

You seem to keep asking the question so yes It must mean somethuing to you.

> "If you are going to analogize, get it right. You change names like your
> male nurse changes your attends."

Again Brilliant reply , where do you find em,?

>
> Which I can do daily if I like and if it upsets you

> "Nothing here upsets me."

Oh I beg to differ, alot of stuff here upsets you. thats why you get so
worked up over it and the rest of the NG cut you to pieces.

>
> "Yes, I have that effect on cowards."

It would be kinda funny to go around telling everyone why your eating out of
a straw, because some coward busted your jaw.

> "Again, you were the one who stuck your beak in and allded to an
> interlude of some type with Adair."

---------- Snapper head perhaps you have interludes with little boys and have shit like that on your mind. I mentioned about a conversation that may or may not have taken place in private, such as an e -mail, chat room as opposed to a public forum such as NG, or message board, But you with your gay inuendos like talking about gay men getting togther. Perhaps you and Landshark have gotten togther on occasion, he is an admitted homo, you just won't admit it.
>

> "You are out here because you and Adair share the same views and probems
> with yourselves."

Snapper head show me where my views and Doug's (who ever he may be) are the same. Your arguements of why I am here aren't even good ones, which proves you are all bullshit. Do you think I am new to the Ng only since doug or the anti keyclown shit started I have been out here long before you got your web tv starter kit.

> "You really need a life. Glad I can bring a smile to your mundane
> world."

You need to get the life, I am laughing at you, not with you, you are like a punching bag that gets abused daily but keeps coming back for more.

> "Who said anything about you going anywhere? I want you here where I can
> continue to make a fool out of you and your "cough cough" RF theory. Now
> if you are so cool, why are you afraid to let me know your regular name?
> Yes, junior, you are afraid."

You did I will qoute it for you,"It has always been you c'hawks talking about what is best for the group, an alleged concern for everyone, attempting to make your own group, even pleading for members." Well I have yet to see you ever post anythoing of techical nature when will you start? I am waiting. I also told my boss about you and your rf prowess, I said there is a guy who lives in a trailer trash park in Florida, who is a guru of webtv, doesnt know how to turn on a computer, but he likes beating dogs, his meat and maybe children, he is an avid freebander who says he runs no power but acts like he is a Super Bowl 6 Hero, he said come on up he will start you tommorow. You can start mopping the floors cleaning the bathrooms and emptying the trash buckets around the shop. And the best part is you get a rasie from you present salary. Now I know $5.75 an hour seems like a lot but with your skills ....

If someone takes the time to look thru some of these posts,
even the untrained eye can pick out who is who and posting
with different names. It's human nature.....something we can't
disguise regardless of how hard we try. Look for the simple
things first. For instance>

Typing in caps such as HAR DEE HARR HARR and the sort.
A nasty habit by the same person.
Signature lines such as --Aaron Voobner-- and **Moparholic**.
Just can't get away from the little marks beside the name.
Bad spelling.
Same word mispelled in numerous posts.
Catch phrases.
KeyClowns...etc.
Catchy little remarks.
Hmmmmmmmm for one.
Bitching about the same thing.
Spam, Hams and Faggots etc.
Bragging.
I am the best, I 'm gonna git you etc.

A lot can be learned because we just can't seem to break these
nasty little habits.
Mr. K.

Lacking not only in RF integrity, but speaking in an extremely high squeaky voice, Capt. "Genderbent" Tennile jealously and quite by accident mused outloud:

Bert He uses Web Tv don't expect too much help from him. an't afford the computer or doesnt know how to use it I guess. "Bert Craig" <kc2hmn@arrl.net> wrote in message

"Go back to the airplane glue and stay away from radio. You at least had a few witty things to say back then. Now that I gave you the same rattle that Adair smacks himself in the head with daily, your uncontrollable anger is robbing you of even the remotest wit you may have had left.
Sad to see one resorting to self elevation take such a nosedive in front of the world, since, as you claim, you are some kind of, you know, famous tech in here and everyone knows who you are (chuckle). Funny, I don't remember your name coming up in here before, and I definitely have access to a better tech than you claim to be, hell, this ng is full of them.

I couldn't do beans with a radio two years ago, and through the help I received here, well, I betchabygolly I can clip a diode faster -n- you can change your attends. Why, I bet I can solder a mic cord neater than you can dress yourself. I bet I can make a radio sound better than, ah, you get the pic (or don't you?)!

A great tech doesn't have to spout it off and promote themself. They let others do that for them. Looks like you slipped, again. But the arrogance thing follows you everywhere. There is a simple remedy to this, stop hitting yourself in the head with the rattle."

Interesting. I have to assume the toll-free number simply routes the calls to him in Toledo, unless he commutes to Chicago every week. I know there was some debate as to his real address. I discovered his call in another Ham's logbook while looking through it on the drive down to Dayton Ohio from the Detroit area last weekend. The contact was on 2m sideband and his location was listed as Toledo Ohio. A 2m sideband contact between Detroit and Chicago would have been about 250 miles, not a common occurrence on that band, however between Detroit and Toledo it's no big deal.

Now where in did I say I was claiming to be a great tech, are you lieing
again , I claimed to be far superior to you. That is a given. My employer
also thinks I am pretty good too. I gave you the web site perhaps you could
show us your skills

Yes now you got your golden screwdrivers license you are the baddest
technician since .. well you get the picture.. All you know how to do is
butcher a radio you have no idea what the parts you are removing do or why
they are there. Go smoke someone elses Balls

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:23204-3B0D6FEB-85@storefull-125.iap.bryant.webtv.net...
Lacking not only in RF integrity, but speaking in an extremely high
squeaky voice, Capt. "Genderbent" Tennile jealously and quite by
accident mused outloud:
  "Go back to the airplane glue and stay away from radio. You at
least had a few witty things to say back then. Now that I gave you the
same rattle that Adair smacks himself in the head with daily, your
uncontrollable anger is robbing you of even the remotest wit you may
have had left.
I don't remember your name coming up in here before, and I definitely
have access to a better tech than you claim to be, hell, this ng is full
of them.

Now where in did I say I was claiming to be a great tech,

"Sure, you started spouting off about your adeptness at RF theory. Why
did you even bring that up? Oh, the same reason you brought up your
liason with Adair, to stop me from humiliating your boyfriend whenever
he opens his trashy, homo posting mouth that you rush to defend...."

Stop your
are you lieing again , I claimed to be far superior to you.

"You claim alot of things. The only thing that holds true is you are
Adair's lover and fixated with homos as much as he. You two bring it up
in practically all your posts because you think it bothers someone. We
just laugh at your inability to communicate, sort f like your problems
on the air. Now why do you think you and Adair's homosexuality would be
of interest to a cb ng?"

That is a given. My employer

"Oh, now you claim to be employed, eh? Since you brought it up, you must
be trying to toot your own horn again. So who are you, what do you do,
and where do you work? Oh, you really don't want to talk about that,
hell, you are too scared to even face me here in the ng, hehe, whic is
why you have the need to hide, ain't it, techmeister? Wonder why you
brought up employment when you will run from those questions like you do
your identity?"

also thinks I am pretty good too. I gave you the web site

"Just beause you have the intellectual capacity to click on anything anyone sends you, doesn't mean everyone else does."

perhaps you could show us your skills

"I already have. I haven't made anyone bleed like this since Dougie a few months ago. But perhaps, you can face me instead of hiding...then again, no, you won't."

  I couldn't do beans with a radio two years ago, and through the help I received here, well, I betchabygolly I can clip a diode faster -n- you can change your attends. Why, I bet I can solder a mic cord neater than you can dress yourself. I bet I can make a radio sound better than, ah, you get the pic (or don't you?)!

Yes now you got your golden screwdrivers license you are the baddest technician since .. well you get the picture..

"Sure I do. And you are pissed."

All you know how to do is butcher a radio

"Hmmmm...all knowing arrogance, mknowing what's best, you are better.......your slip is showing."

you have no idea

"More arrogance. I slap you around out here and you profess to know what size jock strap I wear."

what the parts you are removing do or why they are there. Go smoke someone elses Balls

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity.."

A great tech doesn't have to spout it off and promote themself. They let others do that for them. Looks like you slipped, again. But the arrogance thing follows you everywhere.

Don't take me being superior to you as a sign of arrogance,

"I don't take you as being superior to anyone I met here. Secondly, I certainly do not attribute your arrogance to any type of intellect, on the contrary, I take it as a sign of weakness, insecurity, and ignorance."

Its not your fault. Show me where I promoted myself as you say.

"You talked trash about RF theory. I correctly pointed out you know nothing about many things."

There are many good techs out here,

Get off your hands and knees twitsie I know when I am licked.

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity.."
